ACKNOWLEDGMENTS

Over the course of conducting the research that led to the production of the present work, I have come to owe much to many, and it is to acknowledge that debt rather than to discharge it that the following words are written. First, I have benefited from the knowledge, experience, patience, and support of the members of my dissertation committee and principal teachers, Professors Peter F. Dorman, Janet H. Johnson, and Robert K. Ritner. Robert Ritner is to be especially thanked for heartily encouraging my research in the topic at its very conception, and Janet Johnson and Peter Dorman for being ready at every stage to provide incisive feedback. From the moment I arrived at Chicago until now, all three have selflessly imparted their knowledge of facts and communicated an insistence on thoroughness and rigor in research, to which any merit in the present work may be attributed. In addition to these three, Dr. W. Raymond Johnson offered constant encouragement, support, knowledge, and advice from beginning to end. Dr. James P. Allen of the Metropolitan Museum of Art has generously provided me with unpublished research data[1] and made available his profound knowledge of grammar and the topic of this work. J. Brett McClain and Will Schenck of the Epigraphic Survey of the Oriental Institute and Margarita Conde of Universidad de Sevilla discussed with me many of the points dealt with here, as did Thomas Dousa. Additionally, I am in the perpetual debt of Professor Edward F. Wente, since it was on account of his article "Mysticism in Pharaonic Egypt?" that I determined to come to the University of Chicago, and since I have afterwards been priviledged to benefit from his intimate knowledge of all phases of ancient Egyptian mortuary literature.

[1] See below in the Introduction, n. 39.

Considerable thanks are owed to John A. Larson, who enabled my access to the notebooks of the Coffin Texts Project of the Oriental Institute and with whose unselfish partnership I made scans of the same, and again to Dr. James P. Allen, who generously provided further assistance in supplying me with a draft copy of his forthcoming *The Egyptian Coffin Texts, Vol. 8: Middle Kingdom Copies of Pyramid Texts*. I am also indebted to the kindness of Drs. T. G. H. James, Vivian Davies, and Richard Parkinson of the British Museum for personal access to Pap. BM 10819 and for a set of photographs of the same.

Without friends and family, this study could not have been completed. Dr. Aaron Burke provided me with a Microsoft Word template of immeasurable utility. My sincerest thanks are extended to my mother, Virginia L. Hays, as well as to the members of the Epigraphic Survey, who accepted me as sibling and child. To the spirit of my father, William B. Hays, a bowl is offered and incense burned.

INTRODUCTION

About a century and a half before the end of the Old Kingdom, collections of religious texts began to be inscribed upon the interior walls of the pyramid tombs of kings and queens, beginning with that of King Wenis, whose last year of reign was at about 2347 BCE[1], and continuing without break until the splendid pyramid complex of King Pepi II, who died around 2219 BCE. Like the tombs containing them, the inscribed texts were aimed at ensuring the attainment and perpetuation of the beatified state of a deceased beneficiary, his state of being an *ȝḫ*, a divinely deceased spirit, an enduring but ghostly member of human society. Today commonly called "Pyramid Texts" (Pyramidentexte) after the title of Kurt Sethe's edition of texts from five Old Kingdom pyramids,[2] this corpus, the oldest collection of religious texts from ancient Egypt,[3] consists of about nine hundred compositions of varying lengths. None of the pyramids contains all of them, and no two pyramids preserve exactly the same texts.[4]

---

[1] All dates in the present work follow the chronology of von Beckerath 1997, pp. 187-192.

[2] See Sethe 1908, p. v, for the appellation. The principal text edition, giving the texts known for the five Old Kingdom kings with mortuary literature, is Sethe 1908-1922. For an up-to-date bibliography of publications of Pyramid Texts since then, see J. P. Allen 2005, pp. 419-420.

[3] There are older religious texts from ancient Egypt, beginning with fragmentary temple blocks from Heliopolis dated to Djoser (see Kahl *et al*. 1995, p. 116 [Ne/He/4] = Urk I 154, 2-8), and there is a fragmentary Dynasty Thirteen papyrus bearing what, according to the report of Gardiner 1955, p. 17, Černy believed might be the text to a funeral ritual dating back to Dynasty Three, although based on the latter's impression that it would be unlikely that the king's children, mentioned in the text, would have attended anything other than a king's funeral, while the text makes use of the term *iʿ* "mastaba" rather than *mr* "pyramid". But neither of these documents represents a collection of texts.

[4] For example, as observed by J. P. Allen 1988, p. 38, the pyramid of Wenis, the oldest, contains about two hundred and thirty texts, whereas the pyramid of Pepi II, the last from Dynasty Six, has about six hundred and seventy-five. Most of Wenis's texts appear again in the pyramid of Pepi II, but sixty-four of them do not.

A. RESEARCH POINT OF DEPARTURE

As a corpus of textual material transcending the bounds of any single source,[5] the Old Kingdom Pyramid Texts represent the birth of the ancient Egyptian mortuary literature tradition, because the practice of positioning sets of religious texts in the immediate proximity of a deceased person is attested in all successive periods until the adoption of Christianity in Roman times. Indeed, although it had once been held that they were to be "sharply distinguished" from the texts appearing in that context in the Middle Kingdom,[6] it is now widely acknowledged that the Pyramid Texts are collectively the hereditary ancestor of the Middle Kingdom mortuary literature,[7] a corpus consisting of verbatim copies of Pyramid Texts and those texts edited by Adriaan de Buck under the title *The Egyptian Coffin Texts.*[8] The continued transmission of Pyramid Texts alongside Coffin Texts in the Middle Kingdom is a first indication that the one is a development of the other: of about one hundred seventy-seven Middle Kingdom sources indexed by Leonard Lesko,[9] 12% bear only Pyramid Texts, 49% bear only Coffin Texts, and 39% have both.

---

[5] The sharing of texts among the pyramids justifies referring to the Old Kingdom group of Pyramid Texts collectively as a corpus. The notion of Billing 2002, p. 43, and now J. P. Allen 2005, *passim*, to the effect that each individual pyramid's texts should be considered as a separate corpus invites the question as to just what the term *corpus* means.

[6] The position expressed by Breasted 1933, p. 152, and maintained as recently as Willems 1988, p. 248, and Barguet 1986, pp. 18-19.

[7] See J. P. Allen 2005, p. 1; Hays 2004, p. 200 with n. 178; Mathieu 2004, pp. 247-262; Jürgens 1995, p. 85; Assmann 2001b, p. 334; and J. P. Allen 1988, p. 40.

[8] The principal publication is by de Buck 1935-1961. See further Barguet 1986, pp. 10-12. The Oriental Institute's forthcoming publication of *The Egyptian Coffin Texts, Vol. 8: Middle Kingdom Copies of Pyramid Texts* by J. P. Allen will redefine the connotations of the term "Coffin Texts".

[9] The following percentages were calculated from the data itemized by Lesko 1979.

Viewing the mortuary literature tradition in terms of growth rather than hard and fast division transforms the questions we ask about it. In order to write a history of this cultural phenomenon, the trends to be sought are not only the differences between the two periods, but their continuities. Whereas the differences show us the direction in which the literature was going, the similarities show how the later grew out of the earlier. For my part, as I began my dissertation research, it was especially the dimension of continuity that was most intriguing to me. I wished to flesh out the points of contact beyond abstract statistics and numbers. I wanted to see how the actual words and ideas of the texts were carried forward from the Old Kingdom to the Middle.

B. CHOICE OF METHODOLOGY

As I intended to draw out textual continuities between two successive stages, the die was cast as to the overall manner of approach to the material; rather than focusing upon individual texts and studying them in respect to uniqueness and difference, I was obliged to examine texts for likenesses. Because I was to study likenesses, and because one already presupposes types in distinguishing Old Kingdom mortuary literature as a unit from Middle Kingdom mortuary literature, and because I wished to make generalizations supported by the details of literally hundreds of texts, I chose a typological approach.[10] It was to be a matter of considering how types of Pyramid Texts were transmitted into the Middle Kingdom and whether these types had any points of contact with the texts newly attested then, the Coffin Texts.

Adopting a typological approach, I encountered my first obstacle. Current descriptions of the typological structure of the Pyramid Texts were not detailed enough to

[10] See Barthes 1974, p. 3, for the two poles of studying texts, differences and similarities, the latter being typological according to him.

fulfill my research needs, especially to address how types of Pyramid Texts were reflected in Coffin Texts new to the Middle Kingdom. To consider one of the oldest, that of Siegfried Schott as expressed in his *Mythe und Mythenbildung im alten Ägypten,* four basic divisions are supposed: "Dramatische Texte",[11] "Hymnen mit der Namensformel",[12] "Götterlehren und Litaneien",[13] and "Verklärungen".[14] From his discussion of these divisions, it is evident that Schott has organized the texts according to two typological criteria: content and the grammatical person of the beneficiary. The rationale for the application of the first criterion is self-evident, since it is a question of classifying *texts*, of which the constituent parts are therefore *words*. The applicability of the second is in the textual ubiquity of the deceased personage for whom the utterances were inscribed: nearly all Pyramid Texts make reference to him by name, pronoun, or both, and those that do not are made relevant to him through their physical juxtaposition to those that do. In utilizing grammatical person, Schott was actually adopting a criterion already employed by Sethe, who used it to distinguish between texts spoken by the beneficiary himself and those addressed to him.[15] While Schott's structure was descriptive enough to be adopted in later overviews of the general contents of Pyramid Texts by Hartwig Altenmüller,[16] the purpose of Schott's work was not to systematically

---

[12] *Ibid.*, pp. 37-42.

[13] *Ibid.*, pp. 42-46.

[14] *Ibid.*, pp. 46-52.

[15] See Sethe 1931, pp. 524-526.

[16] See Altenmüller 1972, pp. 59-63; and Altenmüller 1984, cols. 16-17.

identify the distinctive characteristics of each division, nor to provide a more or less comprehensive inventory of the spells belonging to each and all of their distinguishing characteristics. Instead, his aim was to draw forth features of the supposed divisions so as to illustrate a developmental relationship between them, with the wider goal of arguing for a development of myth out of ritual.[17] Owing to the specificity of his purpose, his discussion is not well suited to finding out how a given Coffin Text might be related to one of his Pyramid Text divisions. For example, it is not easy to see how Coffin Texts spell 65 (CT 65), discussed below in Chapter Three, might be associated or disassociated with any of them. Nor yet is it easy to determine even which Pyramid Texts belong to which divisions, as only representatives are deployed in the course of Schott's presentation.

Schott's divisions are left to one side in a very concise overview of the typological structure of the Pyramid Texts by James P. Allen, where there is a genre of ritual texts, including an offering ritual group and a resurrection ritual group, a genre of spells for the personal use of the deceased, and a genre of incantations directed against harmful creatures.[18] A more detailed, later work by him—the article "Reading a Pyramid"—identifies divisions corresponding to these: an offering ritual,[19] a resurrection ritual,[20] and texts for the personal use of the deceased,[21] including texts directed against hostile

---

[17] In this respect, Schott was engaging a discourse already seventy-five years old at the time of his study; for a history of the "myth and ritual schools", see Bell 1997, pp. 5-8; and Strenski 1996, pp. 52-81.

[18] See J. P. Allen 1988, pp. 38-39. Technically, his offering ritual group and resurrection ritual group are subdivisions of a ritual texts genre alongside the incantation and personal spells genres.

[19] J. P. Allen 1994, pp. 12-15.

[20] *Ibid.*, pp. 15-17.

[21] *Ibid.*, pp. 17-23.

beings.[22] However, rather than to articulate the typological structure of Pyramid Texts in general, the focus of "Reading a Pyramid" is to consider the texts of just one pyramid, that of Wenis. The intent is to identify distinct sections of contiguous texts, or "text sequences", to associate them together into the divisions,[23] and to determine the order in which these divisions are to be "read" within the pyramid's overall context.[24] Allen was able to identify these sections of contiguous texts—there are fifteen of them according to him[25]—because virtually all of the texts of Wenis are repeated in the tomb of the Middle Kingdom official Senwosretankh.[26] Owing to differing architectural layouts, whole sections of texts are distributed slightly differently between the tombs, and in that difference of deployment they become distinguishable. Each of the sections in Senwosretankh corresponds exactly in order and usually exactly in composition to those of Wenis;[27] that is, each section has usually the same texts in always the same order. Allen then relates the sections to one another based upon the grammatical person of the beneficiary and textual themes deemed by him to be significant.

Although I was ready to assume that the structure Allen perceived in Wenis, the first pyramid with texts and the best preserved of them, was relevant to the texts of the

---

[22] *Ibid.*, p. 17.

[23] *Ibid.*, pp. 7-12.

[24] *Ibid.*, pp. 12-23.

[25] *Ibid.*, p. 12.

[26] The correspondence of their contents had already been exploited by Osing 1986, pp. 131-144, who similarly distinguishes sections of texts and an overview of the contents of each section; however, Osing's project is not tied to an overall typological structure of the Pyramid Texts in the way that J. P. Allen 1994 is related to J. P. Allen 1988.

[27] J. P. Allen 1994, p. 7.

later pyramids, I found that his results were not well suited to determining how a given Coffin Text might be related to one of his divisions. For example, on the basis of the information provided in his analysis, it is not easy to see how, again, CT 65 might be associated or disassociated with offering ritual or resurrection ritual texts. Moreover, it is often difficult to relate a Pyramid Text *not* attested in Wenis to one of the four divisions based simply on his discussion. Naturally, the unsuitability of his work to my own interests is owed to differing research goals and to his nearly exclusive focus upon the texts of just one pyramid.

Although left without any typology of Pyramid Texts well suited to my task, I did retain a sense of authenticity of Allen's results owing to the nature of his central analytical tool: it was from what were evidently ancient groupings of texts that he had drawn out a structure. Since my approach was to be typological, and since typology is ultimately an arbitrary process, one might as well attempt to conform the modern organization of ancient texts to the ancient typological sensibility, insofar as it might be perceived. Thus, while the results of his work were not well suited to my task, I was ready to accept Allen's divisions as not only meaningful but also aesthetically appealing from a methodological point of view.

I was all the more ready to do so since, though they do not deal with questions of typology, other scholars besides Allen had identified still other recurring series among the Pyramid Texts, and not merely those shared between Wenis and another source. Indeed, scholarship has long recognized the importance of recurring series of texts. Over three decades ago, Altenmüller had identified several "Spruchfolgen" of Pyramid Textsand Coffin Texts;[28] one of these has been dealt with in a number of subsequent

[28] See Altenmüller 1972, pp. 40-51. Osing 1986, p. 132 n. 9, recognizes Altenmüller's work as inaugurating research into recurring series.

studies,[29] another has been treated as object of a hermeneutical process,[30] another's transmission history has been dealt with in detail,[31] and the cultural and theological significance of still others have been treated under slightly different dress.[32] Whether these other studies have the aim of suggesting the original composition and order of a complex of recurring series,[33] or performing semiotic analysis upon texts occurring within a series,[34] or gathering up a group of texts so as to have access to enough information for a text-critical transmission history of sources bearing them,[35] they all tacitly adhere to Altenmüller's admonition that a Pyramid Text not be studied individually, but rather within the context of its belonging to a larger ancient grouping.[36]

[34] Frandsen 2001, pp. 146-157.

[35] Kahl 1995b and Kahl 1996. For an overview of the text-critical method, see Kahl 1999, pp. 28-36.

[36] Altenmüller 1972, p. 45: "Als wichtiges Ergebnis der ersten orientierenden Untersuchung zu den Überlieferungsfragen bei den Pyramidentexten kann damit zusammengefasst werden, dass die Pyramidentexte nicht also Einzelsprüche behandelt werden dürfen, sondern zu Spruchfolgen geordnet werden müssen." On the procedure's principles and rationales, see Altenmüller 1974, esp. pp. 9-12.

But the only other approach similar to Allen's had even before the time of his writing already been carried out for precisely the same two tombs, that of Wenis and the Middle Kingdom official Senwosretankh. Employing a similar methodology and therefore yielding a similar result, the article is that of Jürgen Osing, "Zur Disposition der Pyramidentexte des Unas".[37] The organizational structure of Osing's study is developed somewhat by Jan Assman in *Tod und Jenseits im alten Ägypten*,[38] who situates the Wenis texts at one side of the temporal frame for his conception of the history of ancient Egyptian mortuary literature. An intriguing notion of his, concerning a distinction into two different kinds of mortuary literature, will be considered at the end of this work; the data collected here permit a strong revision to his view, not only for Pyramid Texts but for mortuary literature in general. The present work will base its assessment not upon a generalized overview of the contents of one pyramid's texts, and thus with only a handful of recurring series bearing only about two hundred and thirty texts, but upon a systematic account of texts from all the pyramids, taking into account the majority of the well over nine hundred Pyramid Texts.

C. DEVELOPMENT OF METHODOLOGY AND QUESTIONS OF DEFINITION

My research plan took a detour into a region of formidable complication: in order to identify the typological relations between the Old and Middle Kingdom mortuary literature in a concrete way, I first had to establish a typological structure rigorously detailed enough to achieve it, and I wished to do so through taking recurring series into account.

---

[37] Osing 1986, pp. 131-144.

[38] Assmann 2001b, pp. 323-324.

In order to analyze the material, then, my first task was to comprehensively identify the ancient groupings, as I suspected that there were more recurring series of texts than those that had been detected so far. To that end, I created a relational database into which I entered information from published and unpublished listings of texts that stipulate their order on their attesting sources, for example the lists compiled by Thomas G. Allen in *Occurrences of Pyramid Texts with Cross Indexes of These and Other Egyptian Mortuary Texts*.[39] Altogether, I entered source and positional information for eleven thousand exemplars of Pyramid and Coffin Texts, borne by about four hundred and fifty ancient sources attesting to them from the Old Kingdom into Roman times.

I then devised a kind of computer program, a "script", that compared all possible contiguous series of texts in a given source—from the very shortest contiguous units of two texts to the very longest—to every other source in order to discover matches of exact composition and order. The insistence upon the exactitude of the matches between two exemplars was intended to restrict the superimposition of modern interpretation upon the ancient data. To draw out the impact that this manner of comparison had on the identification of my recurring series, while J. P. Allen considers PT 200 to belong to his "text sequence C",[40] my process of identification does not include that text in any recurring series, simply because its sole attestation is in the pyramid of Wenis. His inclusion of PT 200 in "text sequence C" is justifiable, but only through interpretation of its content and that of texts adjacent to it. My own recurring series were identified

---

[39] See T. G. Allen 1950, pp. 48-99. The other lists employed were those of Lesko 1979, pp. 13-110, a computer spreadsheet generously provided me by James P. Allen, a computer database of Jürgens 2000 distributed via the World Wide Web, information on source P and on unpublished texts in M incidentally provided by Berger *et al*. 2001, pp. 27-199, and information on unpublished texts in AII presented at Dobrev *et al.* 2000, p. 281, and Mathieu 2004, p. 249 n. 15

[40] See J. P. Allen 1994, p. 9.

without regard to content or any other factor beyond the text as a unit and its sequential contiguity with another text as a unit. By my methodology, because PT 200 has just one attestation, at most everything before and everything after that text can be matched up in a sequence with other sources, but not that one.

As a concrete example of the matches identified in this manner, a set of ninety-one texts on the north wall of the sarcophagus chamber of the pyramid of Neit matches a set of texts on the north wall of the sarcophagus chamber of Senwosretankh; in each of the two sources, it is a matter of exactly the same texts appearing contiguously in exactly the same order: PT 72-81, 25, 32, 82-96, 108-171. The series is distinguishable as a repeated unit because the texts on either side of it differ between the two sources; in Neit, it is preceded by PT 57 and followed by PT 173; in Senwosretankh it is preceded by PT 32 and followed by PT 172. In the present work, a series distinguishable in this way is called a *recurring series*; it is the same set of texts occurring together in the same order on more than one source. To be perfectly clear, the definition of a recurring series strictly involves an exact match between the series of texts on two or more sources; it is not determined by the contents of the texts themselves.

Because the manner of identifying recurring series was mechanical, I view its results to be about as positivistic as the listings of texts themselves. Still, it must be observed that the aspiration to positivism does after all come under the influence of a certain degree of interpretation and is of course prone to human error. To consider the example series PT 72-81, 25, 32, 82-96, 108-171, for instance, while T. G. Allen lists PT 113 as occuring in Neit,[41] the actual publication of the tomb's texts shows its distinctive portion to be virtually lost, with [*ḏd*]-*mdw wsir Nt.* [*i*]*ṯ* [*n*=*k ḥr*(*i*)]=*k* [*ḥtȝ 2*] "[Recit]ation.

[41] T. G. Allen 1950, p. 56.

O Osiris Neit, [ta]ke [that which is on] you. [Two Hetja-loaves.]"[42] While enough of the signs of the text are present to permit a reconstructed identification, the act of reconstruction nevertheless entails a degree of interpretation. As an example of error, in his listing of the texts of Senwosretankh, Hayes overlooks the presence of PT 79 and 80 in between PT 78 and 81,[43] but his facsimile of the tomb's north wall does not, with *wsir zi-ni-wsr.t-ꜥnḫ sdmi n=k ir*(*.t*) *ḥr wḏ3.t ir ḥr=k w3ḏ msdm*(*.t*) "O Osiris Senwosretankh, paint the Whole Eye of Horus to your face. Green eyepaint. Black eyepaint".[44] Naturally, since I know about it, I corrected my database accordingly, but I fully expect there to be errors I have missed, in addition to any errors inadvertently generated by me. It may be added that, as an element of interpretation imposed by me upon the data, whenever a recurring series spans more than one surface of a source, be it wall of a tomb or the side of a coffin, there is an assumption of contiguous arrangement. In the present work, the "most extreme" degree of interpretation across multiple surfaces occurs with "Sequence 57" of Chapter Five; an exceptional case, its identification as a recurring series by a hair more than the usual method is worth the extra argumentation.[45] With these qualifications having been noted, it may be reiterated that the process of the identification of recurring series was intentionally designed to uncover empirically verifiable facts.

Before moving on to discuss the overall implications of what was found by this procedure, a further matter of definition should be addressed. There are two kinds of recurring series: sequences and subsequences. A *sequence* is a recurring series like PT

---

[42] Jéquier 1933, pl. 9, l. 198.

[43] Hayes 1937, p. 15.

[44] *Ibid.*, pl. 4, ll. 143-144.

[45] See below, Chapter Five, at n. 2.

72-81, 25, 32, 82-96, 108-171; it is not enclosed, as it were, by any longer series of texts, and a sequence is always attested as such on at least two sources. A *subsequence*, on the other hand, is a segment of a sequence that, while shorter, maintains the same order. Thus, for example, the interior front surface of the Middle Kingdom coffin M1Ba contains the series PT 81, 25, 32.[46] Since the exact same series of texts is "enclosed" within PT 72-81, 25, 32, 82-96, 108-171, it of course recurs in Neit and Senwosretankh. In order to indicate the set-*sub*set relationship between the two kinds, such "enclosed" segments are called *sub*sequences. A note may be added concerning subsequences: a subsequence may be attested as such on only one source, since, by virtue of its subset relationship, each subsequence recurs in the two or more sequences that "enclose" it. Thus in the present case, the subsequence PT 81, 25, 32 appears as such only on the source M1Ba.

Appendix B lists the identifications made according to the process described above. In respect to recurring series consisting exclusively of Pyramid Texts, I was able to identify one hundred and forty-two sequences and one hundred and sixty-nine subsequences.[47] A numerical label is arbitrarily assigned to each of them. In Appendix B, the recurring series are organized according to the numerals assigned to the sequences, with any enclosed subsequences cited immediately following the entry of its "parent". For instance, the sequence PT 72-81, 25, 32, 82-96, 108-171 is called "Sequence 23".

---

[46] This short series is immediately preceded by PT 77 and immediately followed by another instance of PT 81.

[47] Although not directly bearing on the present study, recurring series not only bearing Pyramid Texts but also those containing Coffin Texts are given there. For studies focused on recurring series of Coffin Texts, see Jürgens 1996; Jürgens 1995; Jürgens 1988; Lapp 1988; with further references at Buchberger 1993, p. 58 n. 94.

Across the breadth of occurrences of Pyramid Texts, about five hundred and fifty texts appear in recurring series. That is, well over half of the Pyramid Texts appear within a contiguous string of two or more texts attested on two or more sources. As for the rest, as will be discussed further below, most of these texts occur only once and therefore by definition cannot appear in any recurring series, while there are indeed well over a hundred that appear more than once and yet not in any recurring series known to me. But since the majority of Pyramid Texts do appear in recurring series, it is evidently less a matter of material anciently assembled at random, and more a tension between the play of variation and the manifestation of standardized groupings, between the flexible and the fixed, between pattern and anti-pattern. One might say that it is a case of "dynamic canonicity".[48]

It is also evident from the still substantial number of texts *not* appearing in recurring series that it is impossible to perform the sort of study that J. P. Allen could do with Wenis for any other pyramid. Indeed, it is by lucky chance that that pyramid's texts are nearly exactly duplicated in a second source, that of Senwosretankh, a Middle Kingdom private mastaba.[49] But for the remainder of the pyramids, it is much more a matter of a mixture of recurring series and texts deployed outside of any attested recurring series.

It should be noted that, despite their lack of membership in any recurring series, it does not necessarily follow that these texts were not intentionally grouped by the Egyptians together with the texts adjacent to them. In fact, two thirds of them are attested

---

[48] To borrow the phrase of Goldwasser 1991, pp. 129-141.

[49] As noted above, PT 200 in Wenis is not found in Senwosretankh. Senwosretankh, for its part, has about thirty-seven texts that Wenis does not: PT 33, 172-198, 225, 356-357, 364-365, 373, 677, and CT 516.

only once, providing an obvious explanation for their absence from any recurring series. And with all of them, it needs to be stated that the methodology of perceiving ancient groupings today through recurring series is not the same as the ancient editorial processes of selecting texts to be recorded. One critical difference is in how the survival of sources affects our modern detection of recurring series but naturally has no bearing on the production of those sources. As will become evident over the course of this work, the ancient intent seems to have been to record longer compositions or anthologies of texts that belonged together, very often in a fixed order. In my view, it is because of that affinity to one another that the texts were grouped together, very often in a sequentially precise way.

It seemed to me that one could do worse than to take the ancient groupings exhibited by recurring series of texts as a starting point for a detailed typological investigation. Armed with this information, the next step in my research was to draw out the characteristics of the component texts of the recurring series that could provide an empirical basis for a comparison of types of Pyramid Texts to Coffin Texts. Again the relational database proved useful; I entered into it the transliterations and translations of about seven hundred and fifty Pyramid Texts, omitting ones that were damaged and some that did not appear in any recurring series, and I added about four hundred and twenty Coffin Texts, with these having been chosen by me to serve as a representative source of comparison. The characteristics to be drawn out from this raw data were of course to be shared between at least two texts within a single recurring series, since my purpose was not to show the uniqueness of texts but rather their points of contact. The first basic criterion was the grammatical person of the beneficiary, because Sethe, Schott, and J. P.

Allen and several other scholars[50] had made use of it, and because of reasons discussed below in Chapter One, where complications in making use of it are also extensively discussed. The second basic criterion was, naturally, content.[51]

Some words may be devoted to that second criterion. Since my aim was to develop a typological structure that would permit the comparison of types of Pyramid Texts to Coffin Texts, it was not enough to simply draw out interesting features from the texts, nor yet again only to identify the general themes of the recurring series, as Allen had done. In order to identify likenesses, it was necessary to choose expressions that were repeated. They were to be recurring expressions—in other words, intertextual linkages,[52] or one might say "repeated semes", where *seme* means "a unit of signification"[53]—in short, the connections in content were to consist of "a word or words of similar or identical meaning appearing in more than one text", here given the imperfect label of *motif*.[54]

[50] Kees 1952, pp. 31-32; Kees 1983, p. 175; Assmann 1986, col. 1001 with n. 48 at col. 1006; and J. P. Allen 1994, pp. 16-18; Assmann 2001b, pp. 324-325; and Willems 1996, pp. 375-381. See also Assmann 1999, pp. 62-63; and Assmann 1969, pp. 359-360. Eyre 2002, pp. 66ff., would minimize the importance of grammatical person as a classificatory criterion, but his argument as phrased is specifically against employing it in distinguishing between ritual versus non-ritual texts.

[51] One observes that shared occasion (*Sitz im Leben*) and common concepts and sentiments constitute two of the three principal elements of form criticism, and thus genre classification, as applied to the Psalms of the Hebrew Bible by Gunkel 1928-1933, see esp. §1, 8. For a criticism of Gunkel's form criticism, see Campbell 2003, pp. 15-23, where he goes on to argue for the validity of its reformed and contemporary descendant. The similarities of the criteria of the present work to those of Gunkel are as shadows.

[52] See Hays 2004, pp. 179-181.

[53] See Barthes 1974, p. 17

[54] Compare the definition of *Motiv* at Roeder 1993, p. 84, as "eine textuelle Einheit, ein Wort, das auf einen zentralen Begriff in einem bestimmten Text oder Spruch verweist".

Furthermore, in addition to the feature of repetition, there must also be an aspect of distinctiveness; it is not typologically helpful, for example, to choose any repeated term at random; one might, for example, notice that the phrase *ỉr.t ḥrw* "Eye of Horus" occurs in multiple texts, but unless it can be argued that that term is distinctive to a type, which is to say that it must never or only rarely occur outside of it, then it is not useful to discuss it in the present regard; it is too broad to be usefully diagnostic. In fact, the phrase *ỉr.t ḥrw* as such occurs in members of every type identified in Chapters Two through Five, for which reason it and literally thousands of other words and phrases are not collected in the present work.[55] On the other hand, the combination of the verb *ỉm* "take" with *ỉr.t ḥrw* is significant; it occurs only in texts discussed in Chapter Two. *ỉm ỉr.t ḥrw* "take the Eye of Horus" is distinctive to a particular type. Thus, there are three dimensions to a motif as defined in this dissertation: meaning, repetition, and distinctiveness.

While the analysis of the texts in order to identify shared characteristics of person and content is simple in its essence, it may be easily envisioned that the execution of this analysis was extremely complicated in practice, with no small amount of art to go along with the aspirations to science, with plenty of subjectivity and intuition applied to the object of my research. But to simplify the history of my analysis, what I did at this stage was, first, to identify the person of the beneficiary and the motifs shared among the texts of each recurring series. I saw that some of these characteristics were restricted to certain specific series; they were heavily concentrated in clusters of texts. This was a significant

---

[55] Because, as observed above, typological procedures are ultimately arbitrary, one could invent a modern typology centered around any textual feature, including the phrase *ỉr.t ḥrw* of itself, with a type consisting of texts with the phrase and a type consisting of texts without it. The difficulty with this kind of random selection of criteria is in getting the typological structure to conform to other facts, above all the ancient groupings perceivable in recurring series.

finding, because some characteristics were found across the board. It occurred to me that the restricted characteristics were a key to representing what the clusters were all about, while the other motifs were not useful for what I was working on, as mentioned above in discussing *ir.t ḥrw*.

I grouped the recurring series together based upon the characteristics that were restricted to clusters of texts structured by the recurring series. When the texts of one recurring series shared motifs *and* situated the beneficiary in a compatible grammatical person with another series, I associated the two. I continued to perform associations until I had constructed five sets of recurring series, each corresponding to each of the four divisions mentioned above in the context of the work of J. P. Allen and one more in addition. Next, I eliminated from consideration motifs that were *not* distinctive to one of the types. Finally, I associated texts outside of any recurring series with each of these sets, based upon their possession of the characteristics of grammatical person and motifs distinctive to the set. I deemed the texts of each set to constitute a type.

D. PRELIMINARY OVERVIEW OF EXPECTED RESULTS

Naturally, I was aware that my prior reading and interpretation of J. P. Allen's research and discussion might have influenced the divisions I was imposing upon the material, but I found no reason to abandon the general divisions of his mentioned above. By the same token, the utility of my own work does not rest upon an appeal to authority, but stands on its own merits. In fact, my purpose in discussing another scholar's research is not to give a nuanced account of his research but to indicate to the reader just how my own views came to be formulated. Thus it is simultaneously a question of acknowledging debt and signalling influence.

I found it simplest not to attempt to subdivide the divisions into subtypes within the scope of the present work. To have done so while maintaining the formal expository

style of a doctoral thesis would have dramatically extended its scope. It may be said, however, that every one of the types discussed in the following chapters are readily susceptible to further subdivision, though the boundaries between these subdivisions are not always so clear cut. Indeed, it is above all because of that blurring that I thought it best for the dissertation to stick with what was most clear.

As it turned out, the criterion of grammatical person serves to divide Pyramid Texts into two categories, as discussed in Chapter One, while the criterion of shared content subdivides each category into types, as discussed in Chapters Two through Five. The four types treated in these chapters are offering ritual texts, resurrection texts, apotropaic texts, and ascension texts. The fifth, provisioning texts, have already been discussed by me in some detail.[56]

Armed with a set of characteristics for the types, I was now in a position to take the characteristics distinctive to each and compare them to Coffin Texts. Simply put, I was in a position to determine whether all of the types are attested in verbatim Middle Kingdom copies of Pyramid Texts and in variants of them. The application of the typological structure to this purpose was in fact quite simple.

E. UNEXPECTED RESULTS: ON THE ORIGINS OF THE PYRAMID TEXTS

Additionally, and unexpectedly, I had assembled information on each of the types so as not only to go forward in time to the Middle Kingdom, but also backward, to consider the very advent of mortuary literature in the pyramids of the Old Kingdom. What was the significance and usage of each type prior to its incorporation in the tomb?

---

[56] See Hays 2004, pp. 191-199.

Before the 1980s, three comprehensive attempts had been made to reveal the significance and usage of Pyramid Texts in general, by Siegfried Schott,[57] Joachim Spiegel,[58] and Hartwig Altenmüller.[59] Each had the implicit intention of supplying the cultural context explicitly evident in paratextual notations in the New Kingdom Book of the Dead but lacking with the Pyramid Texts. Ironically, they agreed in attributing a cultural setting comparable to Champollion's for the Book of the Dead: just as he had assumed that the Book of the Dead consisted of rites performed for the deceased on the day of burial,[60] so also a century later did Schott, Spiegel, and Altenmüller assume that the Pyramid Texts represent the same thing. While Lepsius overturned Champollion's assessment[61] and replaced it with his own view, still with us today,[62] the fate of the interpretations of Schott, Spiegel, and Altenmüller reached a less satisfying conclusion.

---

[57] Schott 1950, on which see Barta 1981, pp. 4-12.

[58] Especially Spiegel 1971, on which see Barta 1981, pp. 13-28, with additional references at p. 13 n. 1.

[59] Altenmüller 1972, on which see Barta 1981, pp. 28-39.

[60] See Barguet 1967, pp. 13-14; Hornung 1997, p. 7; and Lepsius 1842, p. 3.

[61] See Lepsius 1842, p. 3: "Dieser Codex ist kein Ritualbuch, wofür es Champollion's Bezeichnung 'Rituel funéraire' zu erklären scheint; es enthält keine Vorschriften für den Todtenkultus, keine Hymnen oder Gebete, welche von den Priestern etwa bei der Beerdigung gesprochen worden wären: sondern der Verstorbene ist selbst die handelnde Person darin". (However, one notes that the person performing the utterances is not always the deceased, as with BD 155 (Aa) 4-5: *ḏd.tw rꜣ pn ḥr ḏd nbw ... | rdi.w r ḫḫ n*(*i*) *ꜣḫ pn ỉw=fꜥq ḥr sbꜣ.w n*(*i*)*w imn.t* "let this utterance be recited over a Djed-amulet of gold ... placed at the neck of this *ꜣḫ* when he is entered through the gates of the West", i.e. the rite, complete with the manipulation of a physical object, is to be performed for its beneficiary on the day of his burial.

[62] See *ibid.*, p. 3: a Book of the Dead deposited in the tomb served as a kind of written pass "der ihnen eine günstige Aufnahme an den vielen Pforten in den himmlischen Gegenden und Wohnungen verbürgen sollte". That assessment is resonated for example by Hornung 1997, pp. 26-27; and Hornung 1999, p. 17.

Their very specific formulations of the ritual events of the royal burial in the Old Kingdom were eviscerated by Winfried Barta in his *Die Bedeutung der Pyramidentexte für den verstorbenen König*, beginning with the objection that, while all three had assumed the texts to be set within the context of a burial ritual, they otherwise shared little common ground in reconstructing that ritual's myriad details, in respect to the sequence of the rites of the funeral, the physical acts appropriate to the rites, the manner in which individual texts were recited during them, and their places of performance—let alone in respect to which texts went with what rites.[63] In exposing the wide variance between these three reconstructions, Barta's critique had the effect of underscoring their mutually ingenious character: the very detailed stories that they tell are at best unverifiable.

And their common plotline is flawed as well: with a virtual absence of supporting contemporaneous evidence outside the pyramids, even the later evidence cannot unequivocally show that the texts were from rites certainly situated within a *burial* ritual[64]—not when a single Pyramid Text can have later parallels within multiple rituals, such as the funeral procession, the Opening of the Mouth, and even temple ritual performed for gods.[65] To put it bluntly, a fix on a Pyramid Text's exact setting in life is unattainable.

---

[63] For a text-by-text comparison of the wide divergences between the three, see Barta 1981, pp. 39-49.

[64] See Barta 1981, p. 9.

[65] Consider, for example, the same texts appearing in the Pyramid Texts, the Opening of the Mouth, and temple ritual, on which see Hays 2002, esp. p. 158. And consider PT 644's presence in the Pyramid Texts, the Opening of the Mouth, and the funeral procession, on which see Hays and Schenck, forthcoming. For further references to the continued and adapted use of Pyramid Texts after the Old Kingdom, see Eyre 2002, p. 19 n. 42.

Since no subsequent work has been based on the specific formulations of Schott, Spiegel, or Altenmüller, no counterargument in their defense has been advanced, and no comprehensive work after Barta has attempted in comparably rigorous fashion to identify the position these texts hold in ancient Egyptian religious history, it would seem, from the point of view of Egyptological discourse, that the voice of Barta is the one that has uttered the final comprehensive word on the subject: he would seem to have gotten his wish, then, that finally a single work would show forth the ancient "Wirklichkeit" of the Pyramid Texts,[66] with that reality being his own interpretation of the significance of the corpus.

That "reality" has nothing to do with cultural activities outside the tomb, but rather strictly inheres to the content of the texts: it is a meaning that Barta theologically articulates[67] (although he avers that one is dealing with a myth which is "bruchstückhaft in Form von 'Zitaten' erzählt"[68]) through consultation of texts without differentiating among them by type. There is no reason to differentiate among them since they all belong to a single type or genre (Gattung) of text—the same one as the Coffin Texts and the

---

[66] See Barta 1981, p. 1: "Welche der drei Auslegungen dabei die Wirklichkeit wiedergegeben haben könnte, bleibt also dem forschenden Bemühen des Interessierten überlassen, da bisher weder ein Ausgleich noch eine synkritische Sondierung der geäußerten Ansichten versucht wurde." In fact, it is an intellectually naïve proposition, since one is dealing with belief in a modern imaginary intended to represent a reality, with that imaginary—a history—constructed out of the sparse tissues of historical traces and the glue of untestable axioms or assumptions. Facts are the objects of documentation, not the results of argument and interpretation.

[67] Barta 1981, pp. 71-150. In this manner of approach, non-sequentially related elements of the Pyramid Texts are extracted and re-assembled to yield a quasi-narrative process; the result is not a myth, since the central figure is *a* king—that is, *any* king—rather than a specific character. Occurring within the framework of historical time, its central figure is generic. For this reason, it is more a theology, dealing with universal principles, than a mythology, dealing with distinct characters in a time outside of time. In reconstructing this theology out of the Egyptian material, one finds a parallel in the reconstruction by Proclus of the "true though hidden meaning of Plato", on which see Lloyd 1967, p. 305.

[68] Barta 1981, p. 67.

Book of the Dead.[69] Sealed off from the world of the living[70] and with a ritual character "unsicher und in hohem Maße zweifelhaft",[71] the texts are only relevant to the deceased in the afterworld.[72] In short, no attention is to be paid to their function prior to their attested and inscribed forms;[73] rather, the significance of the Pyramid Texts is in their being "Grabinventar",[74] alongside the coffin and other goods deposited in a tomb, a magico-physical tool intended to help the deceased secure his continued existence[75] and navigate the afterworld.[76] As inscribed texts rather than ritual performances, their meaning is to be found in content alone.

To be sure, one can readily appreciate the sort of impulse that engendered Barta's undisguised hostility to ritual; one may consider, for example, how the practice of studying the Hebrew Bible through the technique of form criticism collapsed under the weight of its obsession with speculating after the original usages of texts, at the expense of ignoring the meaning of texts as attested.[77] Nevertheless, Barta's obsession with theological or mythological content at the expense of ignoring the texts' significance

outside the tomb has not achieved hegemony. On the contrary, scholars such as J. P. Allen,[78] Jan Assmann,[79] John Baines,[80] and Christopher Eyre[81] continue to consider the ritual character of Pyramid Texts. In addition, the difficulty of Barta's position in refusing to differentiate among the texts by type is already signalled in his repeated differentiation of offering ritual texts from other Pyramid Texts.[82]

For my own part, in the course of my own research in the typology of Pyramid Texts, I had gathered information to address that dimension of the life of the texts that Barta had avoided, and I was in a position to attempt to do so without committing the error of over-specificity he observed with Schott, Spiegel, or Altenmüller.

F. MANNER OF PRESENTATION OF RESULTS

But, having finally developed the tool by which to consider the typological continuities between the Old and Middle Kingdom mortuary literature, and now also ready to consider the original setting of each type in a general way, how was I to convince my audience of the relevance of the typological tool itself? How was I to indicate that these four types corresponded in some way to the ancient typological sensibility? How were they to be shown to be more or less authentic? Here the challenge

---

[78] See, for example, J. P. Allen 1994, p. 12, concerning the obviously ritual character of offering ritual texts.

[79] See especially Assmann 2000, p. 33 n. 1, in direct reference to Barta 1981, though already signalled at Assmann 1986, col. 1005 n. 29.

[80] Baines 2004, p. 15: "Hypotheses about the origins and sources of the Pyramid and Coffin Texts have rightly tended to be based on theories of their use in ritual contexts and of their ultimate derivation from oral sources".

[81] See, for example, Eyre 2002, p. 25, in arguing that the context of a text's use is vital to its understanding.

[82] As at Barta 1981, pp. 64, 67, and 71.

stemmed from both the vast complexity of the evidence itself and the differences in how we modern Westerners categorize our world in comparison to how the Egyptians did. There were hundreds of texts and literally thousands of concrete points of contact to be presented, somehow, in a meaningful way, and the determination afterwards of its historical relevance to the shape of ancient Egyptian thought, a topic first systematically approached from the point of view of the Pyramid Texts with no less a personage than James Henry Breasted himself, in the classic of the field *Development of Religion and Thought in Ancient Egypt*.[83] It would not be enough to simply inform the reader that these four types existed and then go on to offer their laundry list of shared characteristics. To give some basis for the correspondence of the constructed typology to the ancient groupings was to be the real challenge, and it is from this point forward in the story of my research that the chapters of this dissertation unfold.

1. PERFORMANCE STRUCTURE

In Chapter One, the division of Pyramid Texts into two categories according to the criterion of the person of the beneficiary will be described, together with the complications attending its usage as a classificatory criterion. In light of these complications, the necessity of making use of it is argued there. And as for the light it sheds on our understanding of these texts and their position in the history of ancient Egyptian religion, that can only be adumbrated until the arrival of this dissertation's conclusions in Chapter Six, where it is most fully engaged. There, the fundamental historical meaning of the corpus will be discussed. Are the texts "liturgies" or are they "literature", to address their meaning from the point of view of a conceptualization of Jan Assmann? As will be argued there, they are neither and both.

---

[83] Breasted 1959 [1912], esp. pp. 70-117, a lecture entitled "Realms of the Dead—The Pyramid Texts—The Ascent to the Sky".

But in between the first and last chapters is a set of chapters outlining the basic arms of the typological structure of the Pyramid Texts. The greater part of each chapter is devoted to my attempt to identify the type in such a way so as to suggest its correlation to the ancient typological sensibility. Whether successful or not, the methodology of revealing a type follows three systematic steps: first, the characteristics of person and content shared among the texts of a long recurring series are identified; second, it is demonstrated that these characteristics are shared by the texts of other recurring series, with further characteristics shared among the whole assemblage afterwards being drawn out; third, based upon the collection of shared characteristics, more texts are associated with the group, but without regard to their membership in any series.

The purpose of each step may be described in detail.

2. Core Series

In the first, one begins with a recurring series of texts that constitutes an ancient grouping, inasmuch as the components of the series are found together in the same order on more than one ancient source. Because, as will be shown to be the case, the texts of this ancient grouping share multiple textual points of contact with one another—grammatical person and motifs—they are related.

3. Recurring Series with Matching Characteristics

The main question stemming from this fact is whether these shared characteristics are found among other ancient groupings. To show that they are is the purpose of the next step, where the characteristics found among the texts of the first recurring series are shown to be distributed among the component texts of others; indeed, it is further shown that the components of the assemblage of recurring series share still more points of contact among them. On the basis of their connections, it is asserted that the texts

collected thus far are members of a type, the typological characteristics of which are the relations between them.

4. Further Texts with Matching Characteristics

The third step is intended to show three things. First, it is seen that the characteristics of the type are found among texts without regard to their belonging to a recurring series. From that it follows that membership in a type is not dependent upon membership in a recurring series; in other words, although members of a type are found gathered together in recurring series, they do not occur only in such series. Second, in polling the Pyramid Texts beyond the recurring series to which I have drawn attention, the degree of distinctiveness of the characteristics will be implicitly revealed: if these characteristics were seen to occur among the texts of types discussed in other chapters, they could not be said to be distinctive. But since they only rarely do, if ever, they in fact may be regarded as such. Third, in associating texts outside of recurring series with the type, one is able to overcome the fact that a substantial number of Pyramid Texts are not attested in any recurring series, and thus to include them in the typological structure.

At the end of this procedure, about seven hundred Pyramid Texts are associated with one each of the four types. Although the means by which the types are identified make use of recurring series as starting points, in the end membership in a recurring series is not a criterion for membership in any of the types. Rather, the typology is defined strictly according to the criteria of the person of the beneficiary and content.

It may be observed once more that all classification is arbitrary, and that a different researcher approaching the same material might choose different criteria. He might not wish to take recurring series into account, for example, or choose an even more precise or a less exacting mode of analyzing the content of the texts into atomized units, what I call "motifs". Differences in the selection of criteria could yield different

typological structures. Consequently, there can never be any single "right" typology in an absolute sense, but differences between typologies may mean that one structure is better suited for explaining certain features of the material. One may consider, for example, the modern classification of the animal kingdom, by physical characteristics, as opposed to the classification of animals according to modes of locomotion, as with the philosopher Plato. Or again, one may consider a magic-realist classification of animals recounted by the post-Structuralist Michel Foucault,[84] the sole purpose of which is to underscore the ultimately arbitrary nature of the taxonomical process. The purpose of such research, then, is not to discover the "true" divisions of texts. Rather, it is a formalized method of interpretation. Its merit is to be evaluated on the basis of its explanatory force.

G. CONTRIBUTION TO HUMAN KNOWLEDGE

1. PLACE OF ATTESTATION VERSUS PLACE OF PERFORMANCE

In each of these chapters, the exposition of the type is followed by two considerations: first, its existential status prior to its advent in the tomb; second, the degree to which it continued to live in the Middle Kingdom. In respect to the origin of a type, the most critical factor is the relationship of the beneficiary to the performance of a text, because it will be seen that, in the case of the types of Chapters Two and Three, there is a disparity between the sepulchral context of display and how the text presents itself as being performed, and in the case of the types of Chapters Four and Five, there is a program of modification to affect that presentation of performance. The hinge of these disparities rests upon the relationship of the deceased beneficiary to the performance of the texts, as indicated by grammatical person within the text. Thus, in addition to providing a background for the division of the texts into two categories, Chapter One sets

[84] See Foucault 1970, pp. xv-xx.

the stage for my attempt to unravel the origin of the Pyramid Texts, with each of the four following chapters dealing with that question, and my sum views on the subject forming one of the main themes of Chapter Six. Again, this is the question of "liturgy" versus "literature". Or rather, it is the systematic interrogation of that question.

2. TRADITION AND TRANSMISSION OF THE TYPE

Concerning the degree to which each of the types enjoyed continued life in the Middle Kingdom, here also this dissertation advances our knowledge of ancient Egyptian religious history with detail. As will be repeatedly seen, there are three principal dimensions of tangible continuity between the literature's two stages: the verbatim transmission of each basic type of Pyramid Text into the Middle Kingdom, permutations from each type into variant Coffin Texts, and the creation of new Coffin Texts according to characteristics distinctive to Pyramid Text types.

The dimension of verbatim transmission reflects the statistics mentioned at the beginning of this Introduction; these are Pyramid Texts that are faithfully copied in the Middle Kingdom without significant modification to content. If it were only a matter of the verbatim transmission of texts, then one might suppose that the continuity in mortuary literature between the Old and Middle Kingdoms centered upon the rote transmission of texts, as if repeating a set of "classics" without the production of new texts of the same types.

But among other indications, the second and third dimensions show that the old types indeed enjoyed continued life in the Middle Kingdom; it is not a question only of the mechanical transmission indicated by the faithfully copied ancient texts, but of them being faithfully transmitted in the Middle Kingdom by priests *who were actively engaged with producing more of them*. In other words, I will argue that this cultural assemblage of texts—this total corpus of mortuary texts from the Old and Middle Kingdoms—

contained ancient texts of a not-quite canonized authority right alongside texts more recently composed. These more contemporaneous texts joined the ranks of four types of texts that had been alive already for three centuries, from at least the last year of the reign of Wenis in 2347 BCE to the middle of Dynasty Eleven, sometime around 2046-1995, when the earliest securely dated collection of Middle Kingdom exemplars of mortuary literature emerges.

CHAPTER ONE

PERFORMANCE STRUCTURES

As observed in the Introduction, Pyramid Texts are dominated by the presence of the texts' beneficiary, the deceased personage for whom they were inscribed. Nearly all of them make reference to him by name, pronoun, or both, and those that do not are made relevant to him through their physical juxtaposition to those that do.[1] As central as he is, taking account of the beneficiary's relationship to a Pyramid Text's performance is critical for getting a grasp of how it was used and understood.

A clear sign of that relationship is in the grammatical person of the beneficiary:[2] from text to text, he can appear as the reciter (first person), the addressed audience (second person),[3] or someone spoken about (third person). Of the three possibilities, the beneficiary in the first person may be regarded as being actively involved in the

---

[1] Of the four hundred and eighty six Pyramid Texts appearing in recurring series of texts (on which see the following chapter), the beneficiary appears by proper name, pronoun, or both in all but thirty-two of them, with the exceptions being PT 226, 228-229, 231, 233, 235-239, 242-243, 276-277, 280, 285, 289-292, 314, 376-377, 500, bPT 502B, 502F, PT 529, fPT 727, bPT 729B, and fPT 730-732.

[2] The value of the grammatical person of the beneficiary as a classificatory criterion has been long recognized for the Pyramid Texts, employed to differentiate two basic kinds of texts as by Sethe 1931, pp. 524-526; Schott 1945, pp. 28-54; Kees 1952, pp. 31-32; Kees 1983, p. 175; Assmann 1986, p. 1001 with n. 48 at 1006; and J. P. Allen 1994, pp. 16-18; Assmann 2001b, pp. 324-325; and Willems 1996, pp. 375-381. See also Assmann 1999, pp. 62-63; and Assmann 1969, pp. 359-360. Eyre 2002, pp. 66ff., would minimize the importance of grammatical person as a classificatory criterion, but his argument as phrased is specifically against employing it in distinguishing between ritual versus non-ritual texts.

[3] With rare exceptions—e.g. PT 437 Pyr 794a (P) *sḏ3.w n=k psḏ.t* "O you at whom the Ennead trembles" (see J. P. Allen 1984 § 54 A. (3) on interpreting *sḏ3.w* as a relative form in extended use)—the Old and Middle Egyptian vocative is grammatically in the third person, and consequently one may more precisely say that there are texts in which the beneficiary is addressed (in the second person and in vocatives) and those where he is spoken about (in the third person, in non-vocative statements).

performance of the recitation; as written, he is the ostensible or actual speaker of the text. In the other two, his involvement is passive; someone else addresses him or speaks about him.[4] In order to distinguish between the two differing relationships, texts conforming to the former may be said to possess a *personal structure*,[5] since the deceased himself personally performs them, while those conforming to the latter may be said to have a *sacerdotal structure*,[6] since their performance is dependent upon an officiant separate from him—in other words, a priest.

In order to more vividly illustrate the contrast between the two structures, it is helpful to consider each as exhibited in later corpora, where cultural settings of performance are transparent.

---

[4] Compare the discussion of "das interpersonelle Element des Hymnus" at Assmann 1975, pp. 85-86, who there and at Assmann 1990, p. 6 with n. 9, awards appropriate emphasis to the importance of the interpersonal structure of a text. My own analysis differs in placing the position of the beneficiary under intense scrutiny, with less interest paid to whether or not a speaker separate from him is present.

[5] *Personal structure* is adapted from the term "personal spells" of J. P. Allen 1988, p. 42, and corresponds to the concept of the "Ich-Text" as employed by Schott 1964 [1945], p. 47 (followed by Kees 1952, p. 31), and to the "interpersonelle Form" annotated as "1:0:1" (a specific speaker addresses an unspecified audience concerning himself) and that annotated as "1:2:1" (a specific speaker addresses a definite audience concerning himself) at Assmann 2001b, p. 324, and to the structure called "Ich-Du-Bezug" at Assmann 1999, p. 62.

[6] Compare the concept of the "Du-Text" as employed by Kees 1952, p. 31, drawing upon the work of Schott 1964 [1945], e.g. p. 42, resonant also in the concept of the "Du-Bezug" at Assmann 1969, pp. 359-360, and Assmann 1979, p. 57 n. 15, developing into a terminology for the "interpersonelle Form" of texts, and annotated as "0:2:2" (an unnamed speaker addresses a specific person concerning the same) and that annotated as "0:0:3" (an unnamed speaker addresses an unspecified audience concerning someone else) at Assmann 2001b, pp. 324-325, with the former structure elsewhere called "0:2" (an anonymous speaker not referring to himself addresses an audience) at Assmann 1990, p. 6. Naturally the concept of the "you-text" does not embrace texts where the beneficiary is spoken of in the third person (entailing a "he-text") or is both addressed in the second and spoken of in the third (entailing a "you/he-text") or is not referred to at all (entailing a "null-text"), while the numerical notations are implicative of distinctions that are not relevant to the taxonomy of Pyramid Texts; see also above at n. 4. (To be precise, Schott 1964, pp. 30-36, employs the term "dramatische Texte" for the "Du-Texte" of Kees 1952, a term flawed equally for the connotations with which it is freighted and for the fact that the "dramatic" structure definitive of that genre is present also in the genre of "Hymnen mit der Namensformel" of Schott 1964, pp. 37-42.)

A. SACERDOTAL STRUCTURE

It is particularly pertinent to consider Pyramid Texts in relation to texts from temple cult, because of their clear connections in sharing texts, phraseology, and role structures.[7] In respect to their performance, temple ritual texts may be regarded as having a sacerdotal structure according to what was just now described: their beneficiary, the god immanent in an image,[8] does not actively participate in the execution of any of the rites (for the simple reason that, from a strictly material point of view, the god's image is inert and inanimate).

To illustrate the sacerdotal structure as exhibited in temple ritual texts, examples may be drawn from the Dynasty Twenty-Two ritual for handling the image of Amun-Re at the temple of Karnak.[9] Constituting a central mystery of the god's cult,[10] the ritual is quite extensive, comprising a series of well over sixty rites performed for the god's benefit by officiants.[11] Among the individual rites, the god never himself speaks; instead, he is situated in the second person, the third, or both.

In the following example, the god is cast only in the second person:

CDJ 13, pBerlin 3055 IV, 9—V, 2 (Moret 1902)

---

[7] See Hays 2002, p. 166.

[8] Or, more precisely, identical to it; see Derchain 1965, p. 9.

[9] Pap. Berlin 3055: see Königliche Museen zu Berlin 1901; Moret 1902; Guglielmi and Buroh 1997; and Ritner 2003, pp. 55-57.

[10] See further Blackman 1998b, pp. 215-237. On its connections to cult for other deities in the Dynasty Nineteen temple at Abydos, see Altenmüller 1969, p. 16; and David 1981, pp. 74-82.

[11] CDJ Title, Pap. Berlin 3055 I, 1 (Moret 1902): *ḫ.wt nṯr irr.wt n pr imn-rˁ nỉ-sw.t nṯr.w m ḥr*(*it*)*-hrw n*(*i*)*t rˁ nb in wˁb ˁ3 imy hrw=f* "the god's rites which are done in the house of Amun-Re, King of the Gods, in the course of the day every day by the great Wab-priest on duty."

r3 n(i) rdi.t ḥr ḫ.t
ḏd-mdw
i.nḏ-ḥr=k imn-rˁ nb ns(.wt) t3.wy
mn.tw ḥr s.t=k wr.t
rti.n=i ḥr ḫ.t=i n snd=k

ḥpt.n=i gbb ḥw.t-ḥr
di=s wr=i
nn ḫr=i n šˁ.wt n(i)t hrw pn

Utterance of prostration.
Recitation:
Hail to you, Amun-Re, Lord of the Thrones of the Two Lands,
enduring upon your great throne.
I have placed (myself) upon my belly because of fear of you,
being afraid because of awe of you,
I having embraced Geb and Hathor,
that she cause me to be great.
I will not fall because of the slaughter of this day.[12]

Here one sees quite easily that the text is recited by someone other than the divine beneficiary, especially since the officiant refers to himself in the first person.[13] But even if that reference were absent, the performance of the text would still be dependent upon someone else, because the god is being addressed.

In the next example, the god, as the object of the rite, appears only in the third person:

CDJ 53, pBerlin 3055 XXX, 3-8 (Moret 1902)

r3 n(i) ḏb3 mnḫ.t idmi
ḏd-mdw
šzp imn-rˁ nb ns(.wt) t3.wy šd=f

mȝʿ ḫrw imn-rʿ nb ns(*.wt*) *tȝ.wy r ḫftiw=f*
zp-4

Utterance of clothing with Idemy-cloth.
Recitation:
Let Amun-Re, Lord of the Thrones of the Two Lands, receive his *šd*-cloth,
from upon the hands of Tayt to his flesh, a god touching a god,
a god donning a god, in this her name of 'Idemyt',
for her *water[14] has been washed by the Nile, her face made bright by the *ȝḫ*s.
As for the cloth which was spun by Isis, which was woven by Nephthys,
they made the linen bright for Amun-Re, Lord of the Thrones of the Two Lands,
that the voice of Amun-Re, Lord of the Thrones of the Two Lands, be true against his enemies.
Four times.

Since individual rites in the image handling ritual alternate between addressing the god and speaking of him, from the point of view of the overall ritual he is both addressed and spoken about. That circumstance is matched in microcosm where texts situate the god in both the second and third person,[15] as in the final example:

CDJ 50, pBerlin 3055 IV, 3-6 (Moret 1902)

[14] For this word, see van der Molen 2000, p. 254.

[15] The same sort of switching from second to third person, or from third to second, can occur in some Egyptian hymns as well as Greek classical and Hellenistic hymns, as observed by Žabkar 1988, pp. 52 and 59; in this regard, see also Barucq and Daumas 1980, pp. 31-32 with n. 25; and Assmann 1969, pp. 359-360. As observed by Garnot 1954, p. 191, there are but few Pyramid Texts that may be counted as hymns.

qȝ psḏ.t ꜥȝ.t ḥr s.t=sn
nfr.w=k n=k ỉmn-rꜥ nb ns(.wt) tȝ.wy
ḥȝ.w ḥbs tw
ꜥrq ꜥrq tw

Utterance of revealing.
Recitation:
The doors of the sky are opened: the doors of the earth are opened.
Hail to Geb, as the gods said to <him>,
established upon the<ir> throne(s).
The doors of the sky are opened, that the Ennead shine.
As Amun-Re, Lord of the Thrones of the Two Lands, is exalted upon his great throne,
so is the great Ennead exalted upon their thrones.
You have your beauty, O Amun-Re, Lord of the Thrones of the Two Lands!
O naked one, be clothed!
O you who would be dressed, be dressed![16]

The performance structure of temple ritual texts matches what is found in many Pyramid Texts. Three texts can illustrate this. In the following example, the beneficiary is only addressed in the second person:

PT 367 Pyr 634-635 (M)

ḏd-mdw
hȝ wsir M.n. ỉn.n n=k gbb ḥr ỉ.nḏ=f ṯw

nḏr.n n=k ḏḥw.ti ḫft(ỉ)=k
ḥsq ḥnꜥ (ỉ)m(ỉw)-ḫt=f n ḫȝtb.n=f ỉm=f

Recitation:
O Osiris Merenre, Geb has brought you Horus, that he save you:
he has brought you the hearts of the gods, that you not lack, that you not cry out.
As Horus has given you his Eye,
that you seize the Wereret-crown before the gods by it,
so has Horus united your limbs for you,

[16] Following the translation of Ritner 2003, p. 56.

having joined you, there being no discord in you.
Thoth has taken hold of your opponent for you,
even with him and those in his Company cut apart, he having no pity on him.

In the next, the beneficiary is only spoken about in the third:

PT 448 Pyr 830 (P)

ḏd-mdw
ḏḥw.ti ỉʿb {ỉ} P. ʿnḫ=f
ỉ.tm ỉr(ỉ)t=f
ḏḥw.ti d n=f ỉr.t ḥr

Recitation:
O Thoth, join Pepi, that he live,
that which (evilly) pertains to him ceasing.
O Thoth, give him the Eye of Horus!

In the last, the person of the beneficiary switches from third to second person:

PT 450 Pyr 832-833a (P)

ḏd-mdw
z[17] *z ḫr kɜ=f z wsỉr ḫr kɜ=f*
z stš ḫr kɜ z ḫnti-ỉr.ti ḫr kɜ=f
z P. ḫr kɜ=f
hɜ P. pw šm n=k ʿnḫ=k n šm.n=k ỉs m(w)t=k

Recitation.
The one who would go is gone to his Ka: Osiris is gone to his Ka:
Seth is gone to his Ka: Khentirti is gone to his Ka;
let Pepi go to his Ka!
O Pepi, go alive; you cannot go dead! ...

[17] Reading the verb *zỉ* in this particular passage with J.P. Allen 1984, § 309. The verb *zỉ* is accepted beyond its occurrence in imperatives by Edel 1955/1964, §§ 39, 44, 62, 180, 425, 517, 675, 727, and 742.1. Wb iii 424.13, meanwhile, is uncertain as to the proper reading of the word ("vielleicht *sj* zu lesen ist"), while directing attention to *zbỉ* at Wb iii 429. For translating the participle literally, i.e. with its semantic content left uneffaced, see the translation of Otto 1960, vol. 2 p. 40, for PT 25 Pyr 17a: "Es eilt ein Eilender mit seinem Ka".

In respect to the beneficiary's relationship to their performance as written, these sample texts may be said to possess a sacerdotal structure, because, as written, their performance is dependent upon someone other than the deceased. As Chapters Two and Three will show in detail, there are ancient groupings of Pyramid Texts comprising texts that uniformly conform to this structure,[18] just as do the individual rites comprised by the image handling ritual for Amun-Re.

B. PERSONAL STRUCTURE

1. THE BENEFICIARY AS RECITER

As noted above, in temple ritual texts the central figure is the god on whose behalf the recitations are performed. Since the god does not speak in them, their performance structure may be contrasted with that of texts to be personally spoken by someone for his own benefit, as written.[19] Examples may be found in the Book of the Dead, since most of its spells were to be recited by their deceased beneficiary:[20]

[18] In Chapter Two, see below at nn. 5-6 and 99-102; see also nn. 135-138. In Chapter Three, see below at nn. 6-9 and 201-204; see also nn. 283-285.

[19] In the context of arguing that the practitioners of magical texts were priestly rather than secular, Ritner 1990, p. 40, draws an important distinction between practitioners and beneficiaries, with "most 'private individuals' functionally unable to use magical texts like O. Gardiner 363", and with the inability to be owed to pervasive illiteracy. The proxy performance of magical-medical texts is at hand with the very first spell of Pap. Ebers (see Borghouts 1978, pp. 44-45, #71), where it is clear that even though the first person of the text is the beneficiary, the reciter of the text is actually someone else speaking as a kind of proxy for him. However, with mortuary texts from the New Kingdom and earlier, illiteracy is not a factor, since such texts were generally owned by the literate elite. Further, the sort of proxy performance entailed by textual indications within the Ebers spell is rare; in the New Kingdom "recension" of the Book of the Dead, for example, it occurs only at BD 13, 30B, 89, 100, 130, 144, 148, 155, and 160. In each of these cases, it is a matter of the talismanic charging of an image or inscribed amulet, as explicitly specified in paratextual instructions accompanying the texts. Unlike these exceptional texts, none of the Pyramid Texts of an originally personal structure shows an indication that it was originally performed by an officiant speaking for the deceased in the first person, and consequently they are interpreted at face value.

[20] As observed by Lapp 1997, pp. 34 and 55-56. See also Assmann 1986, col. 1001 with 1006 n. 48; Assmann 1990, p. 6; and Assmann 2002, p. 32.

Spell of not restraining the Ba of a man in the necropolis.
O exalted one who is adored, great of might,
Ba great of fear, who puts terror of himself in the gods,[21]
who is appeared upon his great throne—
let him make a way for my Ba and for my *3ḫ*, as I am equipped,
with a way having been made for me to the place where Re and Hathor are.
As for the one who knows this spell,
he makes his metamorphose into an equipped *3ḫ* in the necropolis;
he is not restrained at any gate of the West,
being one who enters in and goes forth.

As written, the speaker of the text is the one who is to benefit from it. A way is to be made for his Ba and his *3ḫ*, and for himself. The paratextual statement of worth attached to the end reinforces the dimension of personal performance implicit in the first person of the utterance, since it is not a question of an officiant or priest knowing the text on behalf of someone else, but for his own welfare. Inasmuch as the text is to be performed, it is the reciter who gains from it.

Pyramid Texts that uniformly cast the beneficiary in the first person match the performance structure of this kind of Book of the Dead spell:

PT 227 Pyr 227a-c (W)

[21] Lit. "Ba who is great of his fear, who gives his terror to the gods".

ḏd-mdw
ḥsq(=*i*) *m tp kꜣ km wr*
ḥpnw ḏd(=*i*) *nn r*=*k*
ḥsr-nṯr srq(.*t*) *ḏd*(=*i*) *nn r*=*k*
pnʿ ṯw ḫbḫ {*n*}<*tꜣ*>[22]
ḏd.n(=*i*) *nn r*=*k*

Recitation.
The head of the bull, the Great Black One, will I cut off!
O Hepnu-serpent, against you do I say this!
O god-beaten one, O scorpion, against you do I say this!
Overturn yourself; slither into <the earth>,
for I have said this against you!

As written, the speaker addresses himself to another, and he secures the benefits of the recitation of the text through his own performance of it. Casting the beneficiary in the first person, the recitation of Pyramid Texts like this one requires the beneficiary's active, personal involvement, and for this reason they may be said to possess a personal structure. For this same reason they also may be contrasted with those exhibiting a sacerdotal structure. The contrasting relationships of the beneficiary to the performance of a text provide a means of distinguishing Pyramid Texts into two categories. And ultimately the criterion for the division is the grammatical person of the beneficiary, since it is through examination of it that performance structure is determined.

2. *Ancient Editing of the Person of the Beneficiary*

As simple as the contrast between the two structures may seem from the information presented so far, the application of the criterion of person is considerably

[22] For the emendation *ḫbḫ* {*n*}<*tꜣ*>, see Pyr 676a (T): *ḫbḫ tꜣ*. In Pyr 227c, it is a mistake from the hieratic, as observed by Mathieu 1996, p. 290 with n. 5. On mistakes from the hieratic in the pyramids in general, see Sethe 1908-1922, vol. 3, pp. 125-127. See Jéquier 1933, pp. 18-19, for a list of spelling mistakes in the hieroglyphs of Neit. See Hayes 1937, p. 8, on errors in Senwosretankh showing that it was transcribed from the hieratic. See Grimm 1986, p. 100, for errors in omission.

more complicated: as is well known,[23] many Pyramid Texts were edited away from the first person for the purpose of their inscription in stone, with the result that texts uniformly casting the beneficiary in the first person are in fact quite rare.[24] The phenomenon of editing is abundantly attested[25] through several different signs: recarving, vacillation, doubling, residue, disagreement, and advanced noun.

a. Recarving

The clearest indication that a text was edited from the first person is where a passage was physically recarved, resulting in a palimpsest: after its initial chiseling upon a tomb wall, a passage of a text could afterwards be recarved once or even twice,[26] leaving a final version superimposed over the earlier version or versions, with these still visible in whole or part. Recarving was employed to produce a number of different kinds of modifications, such as the correction of a transcriptional error, the revision of a word

---

[23] See Sethe 1931, p. 525. As observed by Mathieu 1996, pp. 290-292, the wholesale modification of the grammatical person of the beneficiary away from the first occasionally led to the mistaken modification away from the first of the person of a priest officiating on behalf of the beneficiary; see below n. 54. Akin to instances of mistakenly modifying a priest originally in the first person to the third is a passage showing exemplar disagreement where the subject of modification is not the beneficiary: PT 427 Pyr 777b-c (P): *nw.t | ỉw.n=t ỉs ḥnm=t wr pn* "... O Nut. That you have come is that you protect this Great One," with the goddess in the second person, versus the passage as it appears in M: *nw.t | ỉw.n*(*=ỉ*) *ỉs ḥnm*(*=ỉ*) *wr pn* "... O Nut. That I have come is even that I protect this Great One." The situation in the Middle Kingdom is more complicated, as Jürgens 1992, p. 51 n. 6, has observed, where not only an original first person pronoun could be replaced by the name of the beneficiary, but also the name of the beneficiary could be replaced by the first person pronoun.

[24] There are only fifteen among the texts listed in Appendix A: PT 227, 232, 241, 281-282, 284, 286-287, 312, 474, 499, bPT 502E, PT 551, fPT 691, and fPT 691B.

[25] Evidence of editing is present among seventy-four of the texts listed in Appendix A: PT 262, 266, 269-271, 283, 296, 299, 301-302, 311, 321-322, 327, 333, 335- 336, 361-362, 407-408, 439, 456, 467, 469-471, 473, 475, 475-478, 480-481, 484, 494-495, bPT 502H, PT 503-511, 513, 515, 517-521, 525, 527-528, 531, 555, 562-563, 565, 567, 569, bPT 570A, PT 571-573, 576, 594, 609, bPT 625A, PT 626, 681, and 684.

[26] As noted for P by Pierre 1994, p. 306.

or phrase, or the adjustment of the person of the beneficiary.[27] In cases where recarving to change person is evident, it is always a matter of the first person modified to the third.[28] For example, a passage in the pyramid of Pepi I initially read *ḏd n=i nw tp*(*i*)-ꜥ*.wi=i* "let speak to me this one who is before me,"[29] but the suffix pronouns *=i* were later modified, so that the final version of the passage reads *ḏd n=f nw tp*(*i*)-ꜥ*.wi=f*(*i*) "let speak to him this one who is before him,"[30] with the suffix pronouns of the initial form nevertheless still visible in palimpsest.[31]

In some texts, recarving occurs in just one passage, while all[32] or most[33] other appearances of the beneficiary elsewhere in such a text already show the third person without recarving; in such cases, it may be understood that a process of editing had taken

---

[27] See Mathieu 1996, pp. 293-311, for a categorized presentation of the different kinds of recarving evident in W.

[28] Although all instances known to me of recarved person happen to involve a change from the first to the third, there are other indications of edited person where it is clear that the change was from the first to the second, as is discussed below.

[29] PT 503 Pyr 1079a (P initial).

[30] PT 503 Pyr 1079a (P final).

[31] See Pierre-Croisiau 2001, pl. 18 (P/C med/E) 5, where the signs of the initial form of the passage are represented as dashed lines, with the final form superimposed over them represented with continuous lines.

[32] As with PT 514 Pyr 1176b (M initial): *mii ỉwii wi* "do not strand me," recarved to (M final): *mii ỉwii sw* "do not strand him." Wherever the beneficiary appears in the remainder of the text, it is in the third person in its initially carved form.

[33] For example, there is recarving at PT 311 Pyr 495c (W final): *n ḫm=f* "he (*sc.* Wenis) would not forget" versus (W initial): *n ḫm*(*=i*) "I would not forget." The text elsewhere typically casts the beneficiary in the third person, except at Pyr 499a (W), where an unmodified first person remains: *ḏd*(*=i*) *n=k* "me saying to you"; (an unmodified lapse to the first person is labelled "vacillation"; see below). Compare Pyr 499a (TT 57, unpublished MMA photos 840 and 841): *ḏd=f n=k* "him saying to you"; (a difference in person between two exemplars—here the first versus the third—is labelled "disagreement"; see below).

place at some point prior to the initial carving and that it had not been carried out completely; subsequent proofreading discovered neglected passages, which were then anciently recarved. In other texts, such as the one quoted above, the text in its initially carved form cast the beneficiary in the first person throughout; afterwards, first person pronouns were recarved to the third person pronoun or the proper name.[34] However, such wholesale adjustment was not always executed thoroughly, with the result that one or more first person pronouns could remain without modification.[35] Here also one perceives a process of editing not carried out completely.[36]

b. Vacillation to First Person

Two important points have just now emerged: texts could undergo editing prior to their being incised on the tomb wall, and the process of editing was not always executed with completeness. Consequently, even in a text which shows no signs of recarving, if it generally casts the beneficiary in the third person, the second, or both, but suddenly vacillates to the first, it may be assumed that editing had taken place prior to the carving but had not been carried out completely. For example, in a text in Pepi I where the beneficiary generally appears in the third person, a passage reads

ḫsf=k w ḥ3.w M. pn m wi3=k pw
ink sk sn wp.(*w*)*t*(*i*) *n*(*i*) *rˁ*

you are not to keep Merire from boarding this your bark,

---

[34] The proper name appearing, for example, at PT 503 Pyr 1080d (P final of three stages): *n zšiw P.* "Pepi will not be *drawn out," over Pyr 1080d (P second stage): *n zšiw=f* "he will not be *drawn out," over Pyr 1080d (P initial stage): *n zšiw=i* "I will not be *drawn out."

[35] In the text quoted above, at PT 503 Pyr 1079b (P): *wrḥ=i m ḥ3.t*(*i*)*t* "with me anointed with Hatit-oil."

[36] Moreover, Pierre 1994, p. 306, observes that the manner in which modifications were carried in P (in the "*grand module*") was not systematic, such as in employing the proper name as opposed to the third person pronoun. Evident is a degree of haphazardness in the editing process.

for I am the one who destroys them, the agent of Re.[37]

In both clauses, the deceased king is the subject, but in the first he is spoken of as "Merire", while in the second he speaks of himself as *ink* "I". Where it occurs, complementary evidence can add conviction to understanding such passages as displaying the original grammatical person of the beneficiary. In the present instance, for example, the exemplar of the text in the pyramid of Merenre shows *M.n. pw sk sn ỉp.wti n(i) rˁ* "Merenre is the one who destroys them, the agent of Re"[38]: Pepi I vacillates from the third person to the first, while the corresponding passage in Merenre shows only the third person.[39] But even without the complementary evidence, given that editing took place prior to transcription (as well as after, with recarving) and that it was not always carried out completely, there are grounds for interpreting cases of vacillation as an accidentally unedited instance of the original person of the beneficiary.

c. Doubling of Pronouns and Nouns

With vacillation, one encounters cases where the ancient editor inadvertently left an original first person intact. A related phenomenon is the doubling of pronouns and nouns with the same referent, with the first person pronoun immediately followed by either the third person pronoun or the name of the beneficiary. In such instances, the first person of the transcriptional source was inadvertently maintained alongside an added non-first person pronoun. For example, *n {wỉ} Ne. ỉr tȝ* "{I} Neferkare is not for the

---

[37] PT 569 Pyr 1440b-c (P).

[38] PT 569 Pyr 1440c (M).

[39] A difference in person of this kind is labelled "disagreement" in Appendix A and is discussed below.

earth."[40] In this instance, the process of editing took place prior to the actual carving. How doubling can come about may be seen from a recarved passage; for example, an initial stage of *wꜤb=i m sḫ.t-iȝr.w* "I having been made pure in the Field of Rushes"[41] was recarved to *wꜤb{=i}=f m sḫ.t-iȝr.w* "{I} he having been made pure in the Field of Rushes."[42] The editing, imperfectly carried out, has added a new pronoun without replacing the original.

d. Residual *–i* and *–ii* with Third Weak Verbs

A phenomenon closely akin to doubling is residue of the original first person, as evident in the expressed final *-ii* or *-i* of verb forms from third weak verbs. While a final *-ii* could in ordinary circumstances be written for third weak verbs with suffix, no matter the person,[43] data for expressed final *-ii* gathered by J. P. Allen, reveals the comparative rarity of a final *–ii* with subjects other than the beneficiary—on the order of fourteen versus forty-nine cited lines.[44] Thus the difference in frequency permits such orthographies to be interpreted as an imperfect indication of the original person: the final, weak radical of the verb's stem (*-i*) plus the the first person suffix pronoun (*-i=i*). With

---

[40] PT 467 Pyr 890b (N).

[41] PT 510 Pyr 1135b (P initial).

[42] PT 510 Pyr 1135b (P final).

[43] As noted by Doret 1986, p. 87. A final *–ii* can occur especially in the "subjunctive *sḏm=f*" (by which term I refer to the verb form labelled as such by Doret 1986, pp. 22-23); see Doret 1986, p. 115 (Table 1). One observes that, in Old Egyptian, a final *–ii* appears in the *sḏm=f* virtually always with third weak verbs only, and consequently one may regard it in those cases as a representation of the final consonant, as opposed to a flexional ending unrelated to the root. The sole exception known to me involves the final geminating verb *pḥrr* at PT 673 Pyr 1991a (N): *pḥr.ii sin.w=k* "let your runners race", unless one interprets the final *-.ii* as having been written for geminated *-r*; by that interpretation, the example would neither be a subjunctive *sḏm=f* nor an exception to the rule.

[44] See J. P. Allen 1984, §§ 777 A. (5) and (6).

the edited addition of a non-first person subject, the *-i=i* of the original now stands together to represent the expressed, final weak radical *-ii* of the verb stem, since *-i* and *-ii* are interchangeable in Old Egyptian.[45] An example with recarving will show how this kind of alteration came about: the initially carved stage of a passage in Pepi I shows *hꜣi=i* "that I descend"; it was recarved to *hꜣii=f* "that he descend."[46] The *-ii* ending is residue of the original first person.

Though less reliable, worthy of note are instances where a third weak verb shows a single reed-leaf alone. To consider J. P. Allen's data again,[47] there are about forty-five cited lines with non-beneficiary as subject versus sixteen, a situation the reverse of endings with *–ii*: one presumes that in the majority of cases, the final *–i* cannot in fact be the residue of an original version but rather must ordinarily represent the final consonant. Nevertheless again a recarved passage from Pepi I shows that such instances may be deemed as a sign of editing, with *nmi=f* "let him traverse" recarved from *nm=i* "let me traverse".[48]

e. Exemplar Disagreement

From specific instances of the kinds of editing encountered so far—recarving,[49]

---

[45] See Edel 1955/1964, §§137-140.

[49] In reference to the citations of this and the following three notes, see Appendix A, where the relevant passages are transliterated and translated. Recarving occurs at PT 283 Pyr 424a; PT 296 Pyr 439a; PT 301 Pyr 448b; PT 311 Pyr 495c; PT 322 Pyr 518c; PT 322 Pyr 518c; PT 333 Pyr 542c; PT 407 Pyr 710a; PT 408 Pyr 714a; PT 494 Pyr 1063c; PT 495 Pyr 1064c; PT 503 Pyr 1079a; PT 504 Pyr 1083a; PT 505 Pyr 1090e-f; PT 506 Pyr 1094a; PT 507 Pyr 1104a; PT 508 Pyr 1107a; PT 509 Pyr 1120c; PT 510 Pyr 1133a-b; PT 511 Pyr 1149b; PT 513 Pyr 1174b; PT 515 Pyr 1176b.

vacillation,[50] doubling,[51] and even residue[52]—what is plain from well over sixty texts[53] is a tendency to edit the person of the beneficiary away from the first. Indeed, so mechanical was the procedure that even in texts of sacerdotal structure an officiant making reference to himself could, very rarely, be mistakenly edited away from the first person,[54] as Sethe and Mathieu have observed.[55]

It is worth noting that only recarving is a certain sign that a text has been edited from one grammatical person to another. Even so, corroborating evidence in the very form of recarving has been presented to show that the other three signs of editing are likewise legitimate, if less perfect in reliability. In light of the demonstrated tendency for editing away from the first person as shown by these four signs, one may pause for a

---

[55] See above n. 23.

moment to consider all of the equally certain cases of editing of the person of the beneficiary away from a pronoun other than the first. For the Pyramid Texts, they may be fully summarized by the following word: none. There are no cases showing recarving of the person of the beneficiary away from, for example, the third person to the second, or from the second person to the third. It is important to make this observation, because, while all four of the kinds of editing encountered so far indicate the original person by their natures, the next two do not; instead, of themselves they merely indicate that some form of editing has taken place. And thus, so long as one chooses to keep them under consideration despite a substantial degree of ambiguity, one will find little in the way of external support for interpreting them as other than what has so far been documented: taken as a sign of editing, one has some grounds to assume that it was from the first person.

With that said, the next kind of sign may be considered. Sometimes two or more exemplars of the same passage of a text do not cast the beneficiary in the same grammatical person. Because there is disagreement between them, it is clear that the original person had been altered at some point in the history of the text between the moment of its composition and the two moments of its attested manifestation. An example of this kind appears at PT 306, which is useful to consider, since this text was alleged by Sethe to originally have been in the second person "(an den Toten gerichtet)" but afterwards altered to the third.[56]

---

[56] Sethe 1935b, p. 290, followed by Faulkner 1998, p. 95 n. 1, with a similar view expressed at J. P. Allen 1994, p. 18 with n. 23. Similarly Sethe 1935d, p. 222, concerning PT 474, followed noncommittally both by Faulkner 1998, p. 162 n. 2, and Doret 1991, p. 64 with n. 66. See also Assmann 2002, p. 32 with n. 47: "Die Änderung eines Textes von 1:0 in 0:3 ist in den PT sehr häufig belegt, und auch die Änderung von 0:2 in 0:3 kommt vor".

In a moment, his reasons for this viewpoint will be considered. But the passage exhibiting the disagreement should first be shown. In Wenis's exemplar, it reads *nṯr.w ỉr(ỉ)w p.t nṯr.w ỉr(ỉ)w t3 | ỉr=sn wṯz.w n W. ḥr-ꜥ.wỉ=sn* "the gods who are in the sky, and the gods who are in the earth making supports for Wenis before them." Here, the name of the beneficiary is object of a preposition ("... making supports for Wenis..."). A later exemplar of the text, in the pyramid of Merenre, shows the second person suffix pronoun in that position: *nṯr.w ỉr(ỉ)w p.t nṯr.w ỉr(ỉ)w t3 | ỉr=sn n=k wṯz.w ḥr-ꜥ.wỉ=sn* "... making supports for you ...."[57] In exhibiting different persons for the beneficiary, the exemplars disagree.

Now, in supposing that the second person is original and has been changed in another exemplar to the third, Sethe would presumably have based his argument upon a desire to insert the beneficiary's name in the text. One is forced to say "presumably" because he does not actually directly support his interpretation of PT 306. However, he elsewhere suggests three possible rationales as to why, in general, the person of the beneficiary was changed in the Pyramid Texts: 1) the person of the beneficiary was edited so as to make their performance independent from him[58] 2) or rather, since the deceased did actually intend to read the texts himself, he had his name inserted in them so as to affect the appearance of objectivity in doing so, adumbrating the manner of Julius Caesar in his Gallic battle accounts[59] 3) or instead, by having his name inserted in the

---

[57] PT 306 Pyr 478a-b.

[58] Sethe 1931, p. 526: Is it to be thought "daß die Texte auch, wenn der Tote selbst sie nicht las, durch ihr bloßes Dasein in Kraft treten sollten, sich gleichsam selbst läsen und dadurch dem Toten verschafften, was in ihnen für ihn gewünscht oder von ihm erzählt wird?"

[59] Sethe 1931, p. 526: "Will der Verstorbene, wenn er von sich in der 3. Person redet und sich immer wieder mit Namen nennt, den Schein der Objektivität erwecken, etwa wie Caesar in seinen Kriegsberichten?"

texts, the deceased sought to attain a kind of immortality, knowing that the texts would someday be exposed.[60] None of these three explanations is adequate to address situations like that of PT 306. While the first explanation accounts for editing away from the first person, it does not explain why a text might have been edited from the second, since the performance of such a text is already independent of the reciter. The next two explanations, resonated elsewhere,[61] both seek to explain the editing of person as motivated by a desire to insert the name of the deceased in the text. Here one is on much more solid ground, since that intent is indeed demonstrable and will in fact be discussed a bit more below.[62] Nevertheless, an explanation based *solely* on the replacement by *name* does not fully account for all cases of editing, because *sometimes* it was a matter of changing the first person to a third person *pronoun*.[63] Moreover, if it were simply a matter of wishing to insert the name of the deceased, it could have been as easily done in a text originally in the second person through the insertion of a vocative. In short, Sethe's

---

[60] Sethe 1931, p. 527: "Für wen waren also die Königsnamen in die Texte gesetzt, in denen sie uns heute nach der gewaltsamen Öffnung der Pyramiden ... entgegenprangen und ihren mutmaßlichen Zweck, uns den Namen des betreffenden Königs einzuhämmern, so vortrefflich erfüllen, daß mehrere von jenen Königen, von denen sonst wenig oder gar nichts bekannt ist, eben dadurch nach mehr als 4000 Jahren noch zu einer gewissen Berühmtheit gelangt sind? Man darf sich angesichts dieses Widerspruches wohl fragen, ob die alten Könige nicht geradezu mit einer solchen Möglichkeit gerechnet haben und eben deshalb für eine solche Verewigung ihres Namens in ihren Grabbauten gesorgt haben."

[61] As at J. P. Allen 1999, p. 445, in suggesting that "the change to the third person allowed the texts to be personalized for a particular pyramid"; see also J. P. Allen 1994, p. 17 n. 19; and Schott 1964, p. 47; and, for the Coffin Texts, at de Buck 1949, pp. 88-89, who holds that the "mixing up of the different personal pronouns" is to be owed to the incomplete replacement of the personal pronoun by the beneficiary's name.

[62] See below n. 83.

[63] Some instances like this have already been presented. But to list all of those with recarving: PT 311 Pyr 495c (W); PT 322 Pyr 518c (P); PT 333 Pyr 542c (P); PT 494 Pyr 1063c (P); PT 495 Pyr 1064c (P); PT 503 Pyr 1079a (P); PT 504 Pyr 1083a (P); PT 505 Pyr 1090e-f (P); PT 509 Pyr 1120c (P); PT 513 Pyr 1174b (P); PT 515 Pyr 1176b (M); for their full citations, see Appendix A.

general explanations are not adequate to account for situations like PT 306, nor is there evidence in the form of recarving to demonstrate editing from the second person to the third.

Instead, accepting a degree of uncertainty, one might simply assume that such instances of exemplar disagreement may be understood in accord with what has elsewhere been perceived. The ramification of such an assumption would be that the person of the beneficiary was edited from the first person not only to the third, as has been the case with all examples cited thus far, but also to the second. Thus, in the passage from Wenis, a presumably original first person was changed to the third, while in Merenre it was changed to the second. Such an assumption would be an important step indeed.

Fortunately, it is not necessary to merely assume that editing from the first to the second took place: evidence from three texts shows that it did.

A passage of PT 505 in the pyramid of Pepi I in its initial form was carved as *nw.t ḏi=s ꜥ.wi=s(i) ir=*i "Nut puts her hands upon me"[64] but was recarved as *nw.t ḏi=s ꜥ.wi=s(i) ir=f* "... upon him".[65] The alteration physically shows that the first person was primary. The corresponding passage in the pyramid of Merenre simply reads *nw.t ḏi=s ꜥ.wy=s(i) ir=k* "... upon you":[66] the Merenre exemplar, in the second person, disagrees with Pepi I final (third person) and Pepi I initial (first). One may make an additional note

---

[64] PT 505 Pyr 1090e (P initial).

[65] PT 505 Pyr 1090e (P final). The person of the beneficiary has virtually everywhere been recarved in this text, and always to the third. In addition to the recarving, P also shows doubling; see PT 505 Pyr 1093d (P): *ḥms.w{=i}=f imiti=sn(i) ir wḏꜥ mdw* "he will sit between them (*sc.* the Two Enneads) in order to pass judgment".

[66] PT 505 Pyr 1090e (M).

that the Merenre exemplar elsewhere situates the beneficiary in the third person, as with *pr.n M.n. m p ḫr bꜣ.w p* "from Pe with the Bas of Pe has Merenre ascended",[67] and thus quite clearly a text originally possessing a personal structure has been converted to a text with a sacerdotal structure.

A similar situation is found in PT 513. A passage in the pyramid of Pepi I shows an original *ỉr.n=f ḏd.t.n=ỉ* "he (*sc.* Atum) having done what I said",[68] later recarved to *ỉr.n=f ḏd.t.n=f* "... what he said". Although much of the text elsewhere consists of quotations of statements made by plural gods directly to the beneficiary,[69] with the quotations not being helpful in indicating the relationship of the beneficiary to the performance of a text, it does begin with words uttered by a singular personage[70] speaking about the deceased and directly to him, as with *gm ṯw rˁ ḥr ỉdb.w n(ỉ)w p.t m ḥn.tỉ ỉmỉ nw.t* "let Re find you upon the banks of the sky, as he of the swamp, one who is in Nut".[71] In short, the first passage shows an original first person, conforming to the personal structure, while the recarved, final forms show switching between the second and third, conforming to the sacerdotal structure.

---

[67] PT 505 Pyr 1089a (M). When M shows the third person, it does not disagree with P; see, for example, the corresponding passage in P: *pr.n P. m p ḫr. bꜣ.w p*. The meaning "to ascend" for *pri* was observed already by Breasted 1912, p. 276 n. 1.

[68] PT 513 Pyr 1174b (P).

[69] Beginning with PT 513 Pyr 1169b (P): *ỉw pḥ.w ỉ.n nṯr.w* "'Come, O you who would arrive!'—say the gods".

[70] As indicated by *ỉt=ỉ* "my father" at PT 513 Pyr 1168a (P): *pr r=f ỉt=ỉ ỉr p.t m-m nṯr.w ỉmỉw p.t* "let my father ascend to the sky among the gods who are in the sky", recarved to *pr r=f {ỉ} P. ỉr p.t m-m nṯr.w ỉmỉw p.t* "let Pepi ascend...."

[71] PT 513 Pyr 1169a (P).

The last bit of evidence showing editing to both the second and third person comes from PT 609. With this text, it is not a matter of recarving but vacillation to the first person. Ordinarily the text alternates between the second and the third, as with *ꜣḫ šꜣ*[*.wi*]*=k*(*i*) *m-ḫt mḥ.t ỉt*(*=ỉ*) *M.n.* "your [two] swamps are inundated with the north wind, O my father Merenre"[72] in the second person and *ḏꜣ=f ỉm ỉr ꜣḫ.t ỉr bw ms.w nṯr.w ỉm* "that he cross thereby to the horizon, to the place where the gods are born"[73] in the third. But a passage toward the end of the text reveals the first person as object of a preposition *ỉn m*(*ỉỉ*) *n*(*=ỉ*) *fd ỉpw ỉꜣ.tỉw* "bring to me[74] these Four of the Mounds".[75] In the vacillation to the first, one glimpses the original person of the beneficiary, with the text everywhere else exhibiting switching between the second and third. It has been converted from a personal structure to a sacerdotal structure.

In summary, there is evidence, including recarvings, to show texts altered from an original first person to both the third person and the second. Cases like PT 505 show how exemplar disagreement could come about, and through such a lens other instances like PT 306 may be interpreted. To do so is to keep interpretation in conformity with the facts

---

[72] PT 609 Pyr 1703e (M).

[73] PT 609 Pyr 1704c (M).

[74] The referent of the preposition *n* is the beneficiary, since all instances of this motif show the *fdw* "Four" being brought to him; see PT 263 Pyr 339b-c (W): *ỉn.n=sn n=f fdw ỉpw ꜣḫ.w smsw ḫntỉw ḥnzk.tỉw | ꜥḥꜥ.w m gs ỉꜣb.t*(*ỉ*) *n*(*ỉ*) *p.t ḏsr.w ḥr ḏꜥm.w=sn* "to him have they brought these four elder *ꜣḫ*s, foremost of those of the side-lock, who stand in the eastern side of the sky, who are supported upon their Djam-staves"; PT 264 Pyr 348a-b (T): *ỉn.n n=f sn fdw ỉpw nṯr.w | ꜥḥꜥ.w ḥr ḏꜥm.w p.t* "these Four Gods who stand upon their Djam-staves of the sky have brought themselves to him"; PT 265 Pyr 355b-c (P): *ỉn=sn n P. pn fd ỉpw swꜣ.tỉw ḥnzk.tỉw | ꜥḥꜥ.ỉw ḥr ḏꜥm.w=sn m gs ỉꜣb*(*.tỉ*) *n*(*ỉ*) *p.t* "bringing to Pepi these Four of the passing-by, the side-lock wearers, who stand upon their Djam-staves in the eastern side of the sky"; and PT 266 Pyr 360b-d (P): *ỉn m*(*ỉỉ*) *n P. pn fdw ỉpw sn.w | swꜣ.tỉw ḥnzk.tỉw | ḥms.w ḥr ḏꜥm.w=sn m gs ỉꜣb.tỉ n*(*ỉ*) *p.t* "do bring to Pepi these four brothers, the ones of passing-by, the ones of the side-lock, who sit upon their Djam-staves in the eastern side of the sky".

[75] PT 609 Pyr 1708a-b (M)

pertaining not only to this particular sign of editing, but the generally perceived tendency to edit the person of the beneficiary away from the first.

Furthermore, it has been incidentally shown that it is not a matter of simply converting from a first person pronoun to a proper name (in the third person), but also to third person pronouns and second person pronouns; in other words, it is a matter of converting from the personal structure to the sacerdotal structure.[76] This point will be revisited in Chapter Five.[77]

f. Advanced Noun

The last kind of indication of editing manifests itself in an advanced noun—that is, when an exemplar shows the name of the beneficiary in a syntactic position grammatically unsuitable to a noun but suitable to a pronoun. It is an indication that an ancient editor substituted a proper noun for a pronoun without adjusting the order of words to conform to grammatical rules. A passage from Pepi I, where one exemplar shows recarving, may serve as illustration. As initially inscribed, it reads *i.wn n=i ir*(*i*)*w ꜥ.wt p.t ꜥ3.w p.t* "let the keepers of the parts of the sky open the Doors of the Sky for me,"[78] with the first person suffix pronoun preserving what is presumably the original form. In Pepi I, it was recarved to show the third person *n=f*[79] "for him" in conformity with the tendency to adjust the person away from the first. And its position (correctly) remained the same: the pronominal dative in both stages of Pepi I is advanced ahead of the subject of the verb, *ir*(*i*)*w ꜥ.wt p.t* as well as the direct object of the verb, *ꜥ3.w p.t*.

---

[76] Similarly Doret 1991, pp. 64 and 91.

[77] See below at n. 260.

[78] PT 511 Pyr 1151a (P initial).

[79] PT 511 Pyr 1151a (P final).

However, the same passage in the exemplar of Pepi II reads *i.wn n Ne. ir*(*i*)*w ꜥ.wt p.t ꜥ3.w p.t* "let the keepers of the parts of the sky open the Doors of the Sky for Neferkare."[80] Here also the dative is advanced ahead of the subject and object of the verb—but *n Ne.* consists of preposition plus noun, and as such its proper syntactic position is after the subject and object of the verb. Thus in Neferkare its unusual position is of itself suggestive that the text was originally composed in the first person, later imperfectly edited to the third.

Although the advancement of dative with the name of the beneficiary is common, it may be noted that grammatical rules dictate different positions for pronouns and nouns in other situations.[81] Because of the tendency to edit the person of the beneficiary away from the first, one has grounds to generally interpret cases with advanced noun as indications of this kind of editing.

However, a tendency given passing mention above[82] lends a degree of flexibility to how each instance of advanced noun is to be interpreted: although it is clear that there was a motivation to transform the person of the beneficiary away from the first person, and that this could lead to simple replacement by a third person pronoun, there is also

---

[80] PT 511 Pyr 1151a (N).

[81] Consequently, a modification of person is at hand also with noun subject advanced ahead of an enclitic particle (e.g. PT 659 Pyr 1862b: *ꜥḥꜥ Ne. r=f m itr.ti 3ḫ.t* "let thus Neferkare stand at the Two Chapel Rows of the Horizon"), noun object advanced to take position of dependent pronoun (e.g. PT 260 Pyr 317a: *iw wḏꜥ.n W. tfn ḥnꜥ tfn.t* "Tefen and Tefenut have judged Wenis"), and advancement of noun subject to take position of suffix subject (e.g. PT 477 Pyr 968c: *wꜥb Ne. n=k* "with Neferkare performing service for you.") Although the word order of adjectival phrases is more flexible in Old than in Middle Egyptian (see in the present context Edel 1955/1964, §§ 321 and 359), one may wish to see instances such as PT 407 Pyr 710b: *i.mn s.wt T. nfr.t* "let the beautiful places of Teti remain" as an indication of an original suffix, with its conversion to noun leaving it in advance of a participle.

[82] See above at n. 62.

evidence of a motivation to transform the third person pronoun to the proper noun.[83] This second motivation is most apparent in cases where three stages of carving are involved. For example, a passage in P was initially carved to read *pr=i r=i r p.t* "as I thus ascend to the sky,"[84] but was first recarved to read *pr=f r=f r p.t* "as he thus ascends to the sky,"[85] an alteration from the first person to the third person pronoun. And yet the passage was again recarved a second time to read *pr P. ir p.t* "as Pepi ascends to the sky."[86] The final alteration cannot have been motivated by a desire to switch the person of the beneficiary from the first to the third, since that had already been done; rather, it can only be that the actual name of the beneficiary was desired in place of the pronoun. Recognizing that there was also a motivation to simply switch a third person pronoun to the proper name of the beneficiary, a given instance of advanced noun does not of itself show a modification from the first person to the third, for the original might perhaps have merely shown a third person pronoun which was then changed to a proper noun, resulting in agrammatical word order. Because of this possibility, when one holds that agrammatical word order is an indication of an original first person, some degree of interpretation is involved.

C. SUMMARY AND RAMIFICATIONS

Based upon the relationship of the beneficiary to the performance of a text, the Pyramid Texts exhibit two structures of performance evident in texts from later corpora: a sacerdotal structure, where the performance of a text does not require the beneficiary's

---

[83] As also noted by Mathieu 1996, p. 291.

[84] PT 511 Pyr 1149b (P initial).

[85] PT 511 Pyr 1149b (P second).

[86] PT 511 Pyr 1149b (P final).

active involvement, and a personal structure, where the performance is dependent upon it. Since a clear indication of that relationship is in grammatical person, it may serve as a criterion by which to divide Pyramid Texts into two categories.

What is also clear is that texts uniformly preserving the first person are rare, while texts showing a tendency to edit away from the first person are numerous. That tendency is especially evident in cases where the procedure was not carried out completely. But one may assume by the nature of the procedure's purpose that there are texts which show no signs of editing at all but nevertheless were in fact originally in the first person; in other words, some texts consistently exhibiting a sacerdotal structure in all extant exemplars might have previously had a personal structure. Consequently, one must always bear in mind that the criterion is imperfect.

The imperfection of the criterion is substantially mitigated by the context of a given text's transmission. It has already been stated that the following two chapters will show that there are ancient groupings of texts comprising texts that uniformly display a sacerdotal structure. With them, there is no reason to assume that their inscribed forms ever differed from the sources from which they were transcribed, or from any other hypothetical ancestor. In a strikingly contrastive fashion, however, the chapters thereafter will show that there are also ancient groupings of texts plentiful in signs of editing away from the first person—not to mention the occasional text preserving the first person throughout.[87] Based upon our knowledge that texts were edited away from the first person in an incomplete fashion, and given their context of transmission alongside texts showing signs of editing, one will be in a position to assume that the procedure had been

[87] In Chapter Four, see nn. 35-39 and nn. 85-89; see also nn. 107-110. In Chapter Five, see nn. 4-9 and nn. 157-165; see also nn. 239-242.

carried completely with the others. Such an assumption will be further desirable once it is seen that the texts of such series share distinctive characteristics, namely textual content.

Still, this is not to say that the line of argumentation advanced just now, when it unfolds in Chapters Four and Five, will lead to certain knowledge concerning the original performance situation of these texts, and there is no need to pretend otherwise. Indeed, the imperfect nature of some of the indications of editing described already signals a measure of unresolved mystery in the final results. In view of the attendant uncertainty, no matter how great or small it be in the reader's perception, one might be inclined, as with Barta,[88] to simply ignore the person of the beneficiary entirely. But in doing so one would also be forced to ignore the certain fact that editing did take place. That would be a grave mistake, for even while postponing discussion on the editing's significance until Chapters Four and Five, the reader will in the meantime already be aware that the performance structure of some texts was modified at the time that they were put in tombs. From the point of view of our understanding of how the mortuary literature tradition came to be invented, that is a very important piece of information indeed.

[88] See Barta 1981, p. 66.

SECTION ONE

TEXTS OF SACERDOTAL STRUCTURE

CHAPTER TWO

OFFERING RITUAL TEXTS

A. SEQUENCE 23

As mentioned in the Introduction, a set of ninety-one texts on the north wall of the sarcophagus chamber of the pyramid of Neit matches a set of texts on the north wall of the sarcophagus chamber of Senwosretankh. In both sources, it is a matter of the same texts appearing contiguously in the same order: PT 72-81, 25, 32, 82-96, 108-171.

Seeing as this recurring series, labelled Sequence 23, represents a unit of texts transmitted together, it is evident that they are components of an ancient grouping. However, the ancient impetus for the grouping is not transparently evident in the mere fact of common transmission. Prior to further inquiry, one might imagine, for example, that the common transmission might perhaps be the result of the mechanical copying of an identical or similar transcriptional source containing texts of mixed types, or one might hypothesize that texts of different types have been drawn together into a group so as to produce an anthology of varied but compatible nature. Although sequences of this kind will be encountered in chapters after this one, most often a sequence is homogeneous in respect to the type of text it contains,[1] as will be demonstrated throughout this work.

[1] What goes for sequences of strictly fixed composition and order goes also for groups of texts more loosely transmitted together, with variations in composition and order; see further Hays 2004, pp. 184-185.

In this dissertation, the characteristics of a type are seen along the axes of performance structure and textual content, as indicated respectively by the grammatical person of the beneficiary and recurring expressions, or *motifs*, as defined in the Introduction. In developing a typological structure defined by these two criteria as drawn out from texts within recurring sequences, one performs a typological process that maintains maximal contact with ancient groupings. Not only does such an identification of type shed authentic light on the structural constituency of the Pyramid Texts—seeing as the shared characteristics of performance structure and content provide a rigorously detailed description of features definitive of an authentic class of texts—but the type provides the best context through which its members may be understood, both in respect to their significance in their place of attestation, and their significance outside of it. In other words, the significance of a given text is conditioned by the semantic and performative field within which it exists.

In this and subsequent chapters, one begins with a recurring series and sees that its components belong to a certain type, as they share performance structure and motifs. That the type extends beyond the bounds of that particular series is then indicated in two ways, through showing the presence of these same characteristics first in other texts found in other recurring series, and second in other texts without regard to their belonging to a recurring series.

Sequence 23 has two important indications that it is a product of a conscious grouping. One sign is the fact of its recurrence, since the texts' companionship in their travels shows that they belonged together. Another is that the texts are homogeneous in character, inasmuch as they exhibit the sacerdotal performance structure and share similar expressions.

Three concrete examples can illustrate the manner in which characteristics are shared:

PT 86 Pyr 59d (W)

59d *ḏd-mdw*
59d *sḫm n=k s(i) ḫr=k*
59d *ḥms i.gr*
59d *pr.t-ḫrw ni-sw.t*

59d Recitation.
59d Make it (*sc.* the Eye of Horus) return to you;
59d Be seated! Silence!
59d The going-forth-of-the-voice of the king.

PT 87 Pyr 60a (W)

60a *wsir W. m-n=k ir.t ḥr*
60a *iʿb n=k s(i) ir rȝ=k*
60a *ʿb-rȝ*[2]

60a O Osiris Wenis, take the Eye of Horus;
60a join it to your mouth!
60a The repast.[3]

PT 88 Pyr 60b (W)

60b *wsir W. m-n=k ir.t ḥr*
60b *ḫw n=k ti=f s(i)*
60b *t-wt*[4]

60b O Osiris Wenis, take the Eye of Horus;
60b prevent that he (*sc.* Seth) trample it!

---

[2] On the reading *ʿb-rȝ*, see de Meulenaere 1981, pp. 88-89.

[3] For the translation of *ʿb-rȝ* as "repast", see Dorman 1994, p. 457 with n. 17.

[4] For the reading *t-wt*, see Barta 1963, p. 48 with n. 6

60b *wt*-bread.

In the three texts the beneficiary is addressed in the second person, and thus they exhibit the sacerdotal structure. That is uniformly the case with all of the sequence's components: one text makes no reference to the beneficiary,[5] three show the beneficiary in the third person,[6] and the remaining eighty-seven place him in the second. Since none of the texts of the series situates the beneficiary in the first person and none shows signs of the editing of person, there is no reason to suppose that their performance structure ever differed from what is preserved in their attested forms.

The three example texts are linked by shared expressions, of which two may be highlighted, in part to illustrate two kinds of linkages: verbatim and non-verbatim phraseology. In PT 87 and 88, the imperative to the beneficiary that he take the Eye of Horus (*im ỉr.t ḥrw*) tightly links the two texts by an identical meaning generated by verbatim phraseology. More loosely connecting them, each of the three texts has a specification of an action or item attached to its end:[7] *pr.t-ḫrw nỉ-sw.t*, *ꜥb-rꜣ*, and *t-wt*. One may understand that a matching significance is connoted by their parallel positioning—a more precise fix on the connotation will be offered toward the end of the chapter, but for the moment what is important is that the link is not achieved through verbatim phraseology.

---

[5] PT 82. The *sw* of PT 82 Pyr 58b (W) is reflexive to the agent of the verb: *ḏḥw.ti ỉn sw ḫr=s pr.n=f ḫr ỉr.t ḥr* "it is Thoth who brought himself under it; bearing the Eye of Horus has he gone forth." For another instance of *ỉnỉ* with reflexive object, see Pap. Berlin 3024, 17 ("*Lebensmüde*"): *pꜣ ỉs pw prr ỉn=f sw r=f* "the one who went forth is this one, bringing himself then." On Pyr 58b's context within the Horus-Seth mythos, see Meuer 2002, p. 204, although Meuer incorrectly translates with "der sich bringt mit (lit. unter) ihm", seeing as the sense of *ḫr* is clearly of possession rather than accompaniment. See the subsequent text, PT 83 Pyr 58c (W): *ỉ ḫr*(*ỉ*) *m*(*ỉỉ*) "O bearer, come"; and PT 566 Pyr 1429e (P): *n ḥm ỉwỉ.w P. pn P. pw ḫr*(*ỉ*) *ỉr.t ḥr* "Pepi will not be stranded, for Pepi is one who has the Eye of Horus".

[6] PT 77, 81, and 83.

[7] On such specifications, see Grimm 1986, pp. 104-105.

Just as the three texts are linked to each other by this pair of expressions—the imperative and the item specification—so are they connected to many other texts in Sequence 23. The imperative to take the Eye of Horus is found in the majority of the component texts of the series, either with the exact same phraseology[8] or with slight variations to it.[9] Similarly prevalent are specifications of items and actions, with diverse foodstuffs of all sorts, including different kinds of breads and other grain products,[10]

including cosmetics and cloth for the statue[18] and purificatory natron.[19] More broad specifications of offerings are found in such phrases as *pr.t-ḫrw* in *ḏi pr.t-ḫrw* "give the going-forth-of-the-voice".[20] Just as the agent of the verb *ḏi* in this last expression is interpretable as a priest, so also are priestly actions specified in a couple other of the sequence's components.[21] To distill these details back to what was drawn out from the three example texts, the motif of an imperative that the beneficiary take the Eye of Horus and the motif of an item specification serve to link most of the component texts of the series; this is what is meant by the term "intertextual connections".

Found among the texts of the sequence are still other intertextual connections, most of which involve the Eye of Horus *in combination with specific actions*: it is received by the beneficiary, is acted upon by him and others, and is put into relation with

[18] PT 72 Pyr 50b (W): *sṯ-ḥ3b* "ceremony-scent-oil" (on *sṯi*, see Koura 1999, p. 146); PT 73 Pyr 50c (W): *ḥkn.w* "praise-oil" (on *ḥkn*, see Koura 1999, p. 175-176); PT 74 Pyr 51a (W): *sfṯ* "Sefetj-oil" (on *sfṯ*, see Koura 1999, pp. 177 and 180); PT 75 Pyr 51b (W): *nšnm* "Nechenem-oil" (on *nḫnm*, see Koura 1999, p. 173); PT 76 Pyr 51c (W): *tw3.wt* "raised-oil" (on *tw3*, see Koura 1999, 182-183); PT 77 Pyr 53b (W): *ḥ3.t(i)t ʿš* "best cedar oil"; PT 78 Pyr 54a (W): *ḥ3.t(i)t ṯḥnw* "best Libyan oil" (on *ḥ3.tit*, see Koura 1999, 137); PT 79/80 Pyr 54d (N): *w3ḏ.w ʿrf msdm.t ʿrf* "green (eyepaint), one bag; black eyepaint, one bag"; PT 81 Pyr 57e (W): *wnḫ.w 2* "two cloths."

[19] PT 32 Pyr 23b (W): *qbḥ nṯr(w) ṯ3 2* "libation and Netjeru-natron, 2 pellets"; and PT 109 Pyr 72d (W): *bd 2* "two units of Bed-natron."

[20] PT 82 Pyr 58b (N), replacing the *ḫ3.t* "altar" specification of W. Also, PT 86 Pyr 59d (W): *pr.t-ḫrw ni-sw.t* "a going-forth-of-the-voice of the king"; and in the same vein, PT 84 Pyr 59a (W): *ḥtp-ni-sw.t zp-2* "the offering of the king, twice"; PT 83 Pyr 58c (W): *ḥtp-ḏi-ni-sw.t* "the offering given of the king." For the phrase *pr.t-ḫrw*'s etymological meaning, see Junker 1934, 64. Already in the Old Kingdom the term *pr.t-ḫrw* can refer to general mortuary service, both recitation and the manipulation of objects, and thus it appears as caption to a scene of pair of ritualists, one making a gesture, the other bearing a leg of beef as offering, in the Dynasty Four tomb of Khufuikaf; see Reisner 1934, pp. 4 (Fig. 4) and 7. For *pr.t-ḫrw* as purely physical items to be brought, see the falsedoor of Iabetit in her Dynasty Four tomb (Junker 1929, Fig. 51): *in.t pr.t-ḫrw m niw.wt=s nb*(*.wt*) *m ḫ.t nb*(*.t*) *nfr.t* "the bringing of the going-forth-of-the-voice from all of her cities consisting of everything good."

[21] PT 93 Pyr 63b (N): *w3ḥ r t3 m-b3ḥ=f* "setting down before him"; PT 72 Pyr 50b (N): *wrḥ* "anoint."

the god Set. More precisely, the receipt of the Eye of Horus is evident in exhortations that the beneficiary join it (*iʿb si*) to himself[22] and that he make it return (*sḫt/sḥmi*) to himself,[23] and in its being in his brow (*ḥ3.t*),[24] while its former position is in the brow of Horus (*ḥ3.t ḥrw*).[25] The Eye is acted upon in the deceased's opening his mouth by it (*wpi r3 m*),[26] painting it at his face (*sdm ir.t ḥrw r ḥr*),[27] and being satisfied by it (*ḥtp ḥr*).[28] It is put into relation with Seth in reference to his having torn it out (*ir.t ḥrw iṯḥ.t.n=f*)[29] and having himself eaten little of it (*nḏs wnm.t.n stš im=s*).[30] One last motif involving the

[22] As in one of the example texts, PT 87 Pyr 60a (W): *iʿb n=k s*(*i*) *ir r3=k* "join it (*sc.* the Eye of Horus) to your mouth"; and in another text, PT 110 Pyr 72e (W): *iʿb n=k s*(*i*) *ir r3=k* "join it (*sc.* the Eye of Horus) to your mouth".

[23] PT 86 Pyr 59d (W): *sḥm n=k s*(*i*) *ḫr=k* "make it return to you"; PT 169 Pyr 100a (W): *sḫt n=k s*(*i*) "make it return to you".

[24] PT 77 Pyr 52b (W): *dd*(=*i*) *t*(*m*) *m ḥ3.t W. pn* "in the brow of Wenis do I put you"; PT 78 Pyr 54a (W): *in.n*(=*i*) *n=k ir.t ḥr iṯ.n=f r ḥ3.t=k* "to you I have brought the Eye of Horus, which he took away to your forehead"; PT 81 Pyr 57e (W): *r ḥ3.t r ḥ3.t ḫr wsir* "to the brow! To the brow, to Osiris (*sc.* the beneficiary)!"

[25] PT 77 Pyr 52a (W): *im*(*i*)*t ḥ3.t ḥr* "O you who are in the brow of Horus"; Pyr 52b (W): *wn*(*.n*)=*t m* <*ḥ3.t*> *ḥr* "in <the brow> of Horus you were"; PT 134 Pyr 83c (W): *m-n=k ir.t ḥr* (*i*)*m*(*i*)*t ḥ3.t=f* "take the Eye of Horus, that which is in his brow".

[26] PT 93 Pyr 63a (W): *wp=k r3=k m ir.t ḥr* "and open your mouth by the Eye of Horus"; PT 153 Pyr 92a (W): *wp r3=k im=s* "open your mouth with it"; PT 155 Pyr 93a (W): *wp r3=k im=s* "open your mouth with it"; PT 156 Pyr 93c (W): *wp r3=k im=s* "open your mouth with it".

[27] PT 79 Pyr 54c (W): *sdm n=k ir*(*.t*) *ḥr wḏ3.t r ḥr=k* "paint the Whole Eye of Horus in (lit. at) your face"; PT 80 Pyr 55b-c (N): *sdm n=k s*(*i*) *ir ḥr=k* | *sdm.n ḥr ir.t=f wḏ3.t* "paint it into your face, as Horus painted his Whole Eye".

[28] PT 83 Pyr 58c (W): *ḥtp=f ḥr=s* "that he be satisfied with it"; PT 85 Pyr 59c (W): *ḥtp ḥr=s* "be satisfied with it!"

[29] PT 89 Pyr 60c (W); PT 112 Pyr 73c (W); PT 121 Pyr 77a (W); PT 124 Pyr 78c (W); PT 141 Pyr 86e (W): *m-n=k ir.t ḥr iṯḥ.t.n=f* "take the Eye of Horus, which he tore out".

[30] PT 90 Pyr 61a (W); PT 145 Pyr 88c (W): *nḏs wnm.t.n stš im=s* "little is what Seth ate of it".

Eye of Horus has a priest speaking of himself in the first person as the one who brings it to the deceased (*inỉ ir.t ḥrw*).[31] But not all of the motifs in the sequence mention the god's eye; in addition to the specifications of items and actions, whose connections to the Eye must be by inference, there is repeatedly a direction to those whom one may presume to be officiants handling the specified objects: they are to be lifted four times (*f3.t zp-4*),[32] far less often expressed without the specification of number (*f3.t*).[33] Finally there are commands that the deceased provide himself with outflow (*ḥtm m ḥnq*).[34]

---

[31] PT 32 Pyr 22b (W): *ỉw.n(=ỉ) ỉn(=ỉ) n=k ir.t ḥr ỉn(=ỉ) n=k s(ỉ) ḫr=k ṯb(.t)ỉ=k(ỉ)* "I have come, even bringing you the Eye of Horus, I bringing it under you and your sandals"; PT 78 Pyr 54a (W): *ỉn.n(=ỉ) n=k ir.t ḥr ỉṯ.n=f r ḥ3.t=k* "to you I have brought the Eye of Horus, which he took away to your forehead".

[32] In sixty-four texts of this sequence, always *f3.t zp-4*, at PT 108 Pyr 72b (N); PT 109 Pyr 72d (N); PT 110 Pyr 72f (N); PT 111 Pyr 73b (N); PT 112 Pyr 73d (N); PT 113 Pyr 73f (N); PT 114 Pyr 74b (N); PT 115 Pyr 74d (N); PT 116 Pyr 74f (N); PT 117 Pyr 75b (N); PT 118 Pyr 75d (N); PT 119 Pyr 76b (N); PT 121 Pyr 77b (N); PT 120 Pyr 76d (N); PT 122 Pyr 77d (N); PT 123 Pyr 78b (N); PT 124 Pyr 78d (N); PT 125 Pyr 79b (N); PT 126 Pyr 79d (N); PT 127 Pyr 80b (N); PT 128 Pyr 80d (N); PT 129 Pyr 81b (N); PT 130 Pyr 81d (N); PT 131 Pyr 82b (N); PT 132 Pyr 82d (N); PT 133 Pyr 83b (N); PT 134 Pyr 83d (N); PT 135 Pyr 84b (N); PT 136 Pyr 84d (N); PT 137 Pyr 85b (N); PT 138 Pyr 85d (N); PT 139 Pyr 86b (N); PT 140 Pyr 86d (N); PT 141 Pyr 86f (N); PT 142 Pyr 87b (N); PT 143 Pyr 87d (T); PT 144 Pyr 88b (T); PT 145 Pyr 88d (T); PT 146 Pyr 89b (T); PT 147 Pyr 89d (T); PT 148 Pyr 90b (T); PT 149 Pyr 90d (T); PT 150 Pyr 90f (T); PT 151 Pyr 91b (T); PT 152 Pyr 91d (T); PT 153 Pyr 92b (T); PT 154 Pyr 92d (T); PT 155 Pyr 93b (T); PT 156 Pyr 93d (T); PT 157 Pyr 94b (T); PT 158 Pyr 94d (T); PT 159 Pyr 95b (T); PT 160 Pyr 95d (T); PT 161 Pyr 96b (T); PT 162 Pyr 96d (T); PT 163 Pyr 97b (T); PT 164 Pyr 97d (T); PT 165 Pyr 98b (T); PT 166 Pyr 98d (T); PT 167 Pyr 99b (T); PT 168 Pyr 99d (T); PT 169 Pyr 100b (T); PT 170 Pyr 100d (T); and PT 171 Pyr 100f (T).

[34] PT 95 Pyr 64c (W): *ḥtm k(w) m ḥnq pr ỉm=k* "provide yourself with the outflow which went forth from you"; PT 148 Pyr 90a (W); PT 149 Pyr 90c (W); PT 150 Pyr 90e (W); PT 151 Pyr 91a (W): *ḥtm ṯw m ḥnq pr (ỉ)m=k* "provide yourself with the outflow which went forth from you". Compare commands that the beneficiary take the outflow (*ỉm ḥnq*), for which see below n. 65.

In sum, all but one of the ninety-one components of Sequence 23 share expressions,[35] and they all conform to the sacerdotal structure. In consideration of these shared characteristics, it may be proposed that they belong to a certain type.

B. TEXTS OF MATCHING CHARACTERISTICS

The type is not confined to Sequence 23 alone. Or, to speak more precisely, the characteristics of Sequence 23 are found broadly distributed throughout the corpus of Pyramid Texts, thus beyond the narrow bounds of a series of texts attested on the north walls of a queen's pyramid and a Middle Kingdom official's tomb. A first indication of their wider distribution is readily found in attestations of shorter segments of the sequence: subsequences of the series appear as early as the pyramid of Teti, on the east wall of his sarcophagus chamber,[36] with the same segment and another occurring on the north wall of Pepi I's sarcophagus chamber.[37] Several other subsequences of Sequence 23 likewise appear on the north walls of Pepi II's,[38] Wedjebeteni's,[39] and Ibi's[40] sarcophagus

---

[35] The exception is PT 25. As will be momentarily seen, it shares motifs with texts that are in turn related to the other members of Sequence 23; see below n. 105.

[36] Subsequence 53 consisting of PT142-171 on T/S/E and P/S/Ne.

[37] Subsequence 52 consisting of PT126-128 on P/S/Ne (also on Ap/Frag15); and see the preceding note.

[38] Subsequence 41 consisting of PT82-96 on N/S/N; Subsequence 49 consisting of PT108-121 on N/S/N; Subsequence 51 consisting of PT123-171 on N/S/N; Subsequence 56 consisting of PT72-81 PT25 on N/S/N.

[39] Subsequence 40 consisting of PT81 PT25 on Oudj/S/N (and S5C/B); Subsequence 43 consisting of PT83-92 on Oudj/S/N; Subsequence 48 consisting of PT108-171 on Oudj/S/N (and M1NY/B).

[40] Subsequence 24 consisting of PT72-80 on Ibi/S/Nm.

chambers, with (according to J. P. Allen's reconstruction[41]) a similar position in all likelihood applicable to segments of Sequence 23 attested on fragments from Iput.[42] Still more subsequences occur on sources later than the pyramids.[43] Since identically ordered, shorter portions of the series enjoy a considerable frequency of attestation beyond the tombs of Neith and Senwosretankh, it is evident that the components of Sequence 23 are not isolated from the rest of the corpus; they occur not only within that sequence in Neith and Senwosretankh but within other contexts, too.

On the contrary, it is interlocked with large sections of the rest of the corpus. Thus its components can be featured elsewhere in repeatable combinations with different texts, with these other recurring series reaching back to the first pyramid with texts, that of Wenis. For example, PT 25 and 32 of Sequence 23 are also found in Sequence 2, consisting of PT 23, 25, 32, 34-42, 32, and 43. This series first appears on the north wall of the sarcophagus chamber of Wenis, with its recurrence being on the front interior side of the Middle Kingdom coffin BH3C. In Wenis, Sequence 2 overlaps a further series, Sequence 5, consisting of PT 25, 32, 34-42, 32, 43-57, and 72-79, with its recurrence being in the pyramid of Neith, again on the sarcophagus chamber's north wall. The one series overlaps the other because the middle texts of both—PT 25 through 43—are the

[41] See J. P. Allen 1986, pp. 19-23.

[42] Subsequence 42 consisting of PT82-88 on Ap/Frag11 ii; Subsequence 50 consisting of PT117-122 on Ap/Frag13 i; Subsequence 52 consisting of PT126-128 on Ap/Frag15 (and on P/S/Ne); Subsequence 54 consisting of PT148-150 on Ap/Frag14; Subsequence 55 consisting of PT167-168 on Ap/Frag16.

[43] The date of D1D/B, bearing Subsequence 17 consisting of PT72-78, is uncertain: Pepi I by Baer 1960, p. 226 [177A]; Pepi II by Fischer 1963a, pp. 143-145; but "difficult to date with certainty" and "quite possibly later" than Pepi I and Pepi II by Fischer 1963b, p. 37; or yet again the First Intermediate Period by Willems 1988, p. 247. See also Jürgens 1995, pp. 70-73; and Gestermann 2004, pp. 210-211 with n. 39.

same; in the case of Wenis, they are in fact literally the same, occupying the pyramid's lines 5 through 37. The inscriptional overlap in Wenis shows how the texts of its north wall possess multiple sequential links with other sources: in effect, its longer series from PT 23 through 79, the tomb's lines 1 through 65 + 1, bears two overlapping matches to two different sources: BH3C and Neith. This kind of overlap is found in Sequence 23 as well, since Sequence 5 and Sequence 23 overlap in Neith in the same way, the former occupying that source's lines 69 through 144, the latter lines 129 through 256, with the overlapping texts being PT 72-79. Through its overlap with Sequence 5 and through its sharing texts with Sequence 2, one sees in a very concrete fashion how the component texts of Sequence 23 participate with the rest of the corpus.

The same sort of interlocking relationship goes for a number of other recurring series; these likewise typically appear on a pyramid's sarcophagus chamber, north wall,[44] although one series sharing texts with Sequence 23 extends from the north wall of a sarcophagus chamber to the north wall of the passage,[45] and another appears on the north wall of a pyramid's passage.[46]

---

[44] Sequence 3 consisting of PT23-30 on P/S/Ne and N/S/N; Sequence 4 consisting of PT23-25 PT32 on Nt/S/Ne (and Ibi/Frag E); Sequence 26 consisting of PT81 PT25 PT32 PT82-96 PT108-198 on Ibi/S/Nm and S/S/N; Sequence 31 consisting of PT199 PT32 on N/S/N (and W/P/Nw); Subsequence 11 consisting of PT 32 PT 43-44 on Oudj/S/N; Subsequence 12 consisting of PT34-42 PT32 PT43-57 on N/S/N and Ibi/S/Nm; Sequence 13 consisting of PT43-57 PT72-80 on P/S/Ne and Nt/S/N. A similar position probably applies to fragments of the recurring series Sequence 4 consisting of PT23-25 PT32 on Ibi/Frag E (and Nt/S/Ne); Subsequence 5 consisting of PT23 PT25 on Ap/Frag11 i (and BH6C/FR and BH2Ox/FR); Subsequence 8 consisting of PT37-42 PT32 on Ap/Frag10; Subsequence 83 consisting of PT32 PT23 PT25 on Ibi/FragS (and W/S/N + P/Nw). For the positioning of the fragments of Iput, see J. P. Allen 1986, pp. 19-23.

[45] Subsequence 83 consisting of PT32 PT23 PT25 on W/S/N + P/Nw (and Ibi/FragS).

[46] Sequence 31 consisting of PT199 PT32 on W/P/Nw (and N/S/N).

With overlaps of the sort between Sequences 2 and 5 and Sequences 5 and 23, it is tempting to pause for a moment and seek to identify a longer, super-series embracing all of the texts involved—a kind of abstract, archetypal structure from which the attested sources may be conceptualized as having been abstractly generated; or it is tempting to add other criteria, such as orthographical and textual idiosyncracies, to the evidence of segmentations, by means of which one might identify genealogical relationships between the sources. But while such endeavors would yield meaningful results, for the present point it is enough to let the observations stand as they are and proceed to a simple conclusion: since the components of Sequence 23 crop up in other recurring series (as with PT 25 and 32 in Sequence 2) and overlap still others (as with PT 72-79 in Sequence 5), it is evident that its texts are interrelated with further portions of the Old Kingdom corpus.

1. Recurring Series with Matching Characteristics

The texts of Sequence 23 are interrelated with other portions of the corpus not merely through the re-appearance of its components in combination with other texts, but through the sharing of its characteristics with the components of recurring series possessing no texts in common with it at all. Attention may be drawn to over twenty series of this kind in the pyramids, with most appearing on the north wall of the

sarcophagus chamber,[47] but a few on the east[48] or south[49] wall. These thirty-five recurring series are especially important to the present line of inquiry, because they may be said to be internally homogeneous in the same way that the component texts of Sequence 23 may be said to be homogeneous, inasmuch as they share motifs and performance structure, and above all because these characteristics are of a nature identical to those already encountered. What is more, the same sharing of attributes goes for the different texts in the series overlapping or otherwise holding texts in common with it, such as the different texts of Sequences 2 and 5. Taking all of these thirty-five[50] series together, over one hundred additional texts may be taken into account.[51]

A tangible example can illustrate the connections in content and performance structure with the different texts of these series. Immediately following Sequence 23 on

---

[47] Subsequence 15 consisting of PT47-48 on Oudj/S/N; Subsequence 16 consisting of PT55-57 on Oudj/S/N; Sequence 9 consisting of PT29-31 on N/S/N (and Sq2Sq/S/N); Sequence 15 consisting of fPT57A-57I PT106-107 on P/S/Ne (and B16C/H); Subsequence 27 consisting of fPT57A-I on Nt/S/N; Subsequence 30 consisting of PT106-107 on N/S/N; Sequence 16 consisting of PT58-59 aPT60A PT61-62 PT68 PT63-65 on Ibi/S/Nw (and B16C/H); Subsequence 31 consisting of PT58-59 on Nt/S/N; Subsequence 32 consisting of aPT60A PT61-62 on Nt/S/N; Sequence 17 consisting of PT62 fPT62A on Nt/S/N (and Sq1Sq/S/E); Sequence 18 consisting of PT64-70 fPT71 fPT71A-71I on N/S/N and Nt/S/N; Subsequence 33 consisting of PT66-70 fPT71 fPT71A-I on P/S/Ne; Sequence 19 consisting of PT67 PT70 on Ibi/S/Nw (and B16C/H); Sequence 20 consisting of PT70 fPT71 fPT71A-I N306+11-14 fPT57A-I on N/S/N (and B16C/H); Subsequence 62 consisting of PT173-198 on P/S/Ne and Nt/S/N; Sequence 79 consisting of PT414 fPT634 bPT635A-B on N/S/N (and Amenirdis/97-106); Subsequence 118 consisting of PT414 fPT634 bPT635A on P/S/Ne (and Pediniese/456-463); Sequence 123 consisting of PT638-639 on N/S/N (and T9C/H); Sequence 138 consisting of fPT752-756 on N/S/N and Nt/S/N.

[48] Subsequence 61 consisting of PT172-173 on T/S/E; Subsequence 84 consisting of PT199 PT244 on M/S/E.

[49] Subsequence 119 consisting of fPT634 bPT635A on M/S/Sw; Sequence 111 consisting of PT591 PT414 on M/S/W (and T1C/S/E).

[50] In addition to Sequences 2 and 5 discussed above, see the five notes preceding this one.

[51] PT 23-24, 26-30, 34-57, fPT 57A-F, 57I, PT 58-59, 61-62, fPT 62A, PT 63-70, fPT 71, 71A-I, N 306+11-14, PT 106-107, 172-199, 244, 591, fPT 634, bPT 635A-B, PT 639, fPT 752-756.

the north wall of Neith's sarcophagus chamber is Subsequence 62, consisting of PT 173-198. For its part, Subsequence 62 is a subset of two longer sequences attested elsewhere[52]—for which reason it is called a subsequence. Although none of the subsequence's texts appears in Sequence 23, there are multiple points of contact between the two, beginning with expressions already found to be characteristic of the latter. Just about any text selected from Subsequence 62 can serve well as an example.

PT 193 Pyr 110 (N)

110 *ḏd-mdw*
110 *wsir Ne. m-n=k ir(.t) ḥr*
110 *d3p(=i) ṯw im*
110 *d(3)b 2*

110 Recitation.
110 O Osiris Neferkare, take the Eye of Horus;
110 let me present thereby to you.
110 Two figs.

As occurs dozens of times in Sequence 23, there is an imperative to take the Eye of Horus,[53] and at the end of the text an item to be handled is specified, in this case a fruit, as occurs several times in Sequence 23.[54] One may observe in passing that an officiant is present in this text speaking of himself in the first person,[55] addressing the

---

[52] Sequence 26 consisting of PT81 PT25 PT32 PT82-96 PT108-198 on Ibi/S/Nm and S/S/N; Sequence 29 consisting of PT172-198 PT223 on N/S/N and S/S/N. Sequences 26 and 29 overlap in S in the same way that Sequences 2 and 5 overlap in W, as described above. By what Berger-el Naggar et al. 2001, p. 215, rightly assume, Subsequence 62 also may be understood as having once appeared on the fragmentary north wall of the sarcophagus chamber of Pepi I.

[53] See above n. 8.

[54] Including another instance of *d3b 2* "two figs"; see above n. 12.

[55] Compare CDJ 13, cited at p. 33 above.

deceased in the second, but for the moment what is most important is the simple fact that this short text makes use of two expressions found to be characteristic of Sequence 23.

And PT 193 is not alone, since most of its companions in Subsequence 62 do so as well: the receipt of the Eye of Horus is evident in many other instances of a command that the beneficiary take it (*im ỉr.t ḥrw*)[56] and in a further instance of him being exhorted to make it return (*sḫt*) to himself.[57] The Eye is again acted upon in the deceased's opening his mouth by it (*wpỉ r³ m*),[58] he is satisfied (*ḥtp*) because of the recovery of his ocular powers,[59] and a series of foodstuff items are specified, including bread,[60] fruits,[61]

vegetables,[62] grain,[63] and liquids.[64] In short, Subsequence 62 has many of the motifs found to be characteristic of Sequence 23.

And Sequence 23 and Subsequence 62 show a few more connections: there are links between the two series beyond merely the motifs found to be characteristic of the former. In other words, some of the expressions occurring only once in the former also occur in the latter. The beneficiary is commanded to take the outflow already encountered (*im ḥnq*),[65] and a few more kinds of object specifications emerge: "Broad Hall offerings" (*ḥtp wsḫ.t*),[66] altars (*ḫ3w.t, ḥtp*),[67] and Henket-offerings (*ḥnk.t*).[68] Because it is already evident that the two series are related, it is fair to consider these additional intertextual connections as motifs alongside the others. Indeed, they are especially important because they help clarify the manner in which the component texts of Sequence 23 participate in a wider semantic field: the repetition of its expressions is an economy both internal and external.

---

[62] PT 182 Pyr 105a (N): *wꜥḥ 2* "two carob bean (portions)"; PT 195 Pyr 111b (N): *rnp.t nb*(*.t*) *2* "two of every sort of vegetable".

[63] PT 173 Pyr 101f (N): *ꜥb.t* "'Abet-grain"; PT 174 Pyr 101g (N): *bzn 2* "two (portions of) Bezen-grain"; PT 192 Pyr 109b (N): *ꜥg.t ///* "/// (portions of) roast grain".

[64] PT 183 Pyr 105b (N): *ḥb.t* [*2*] "[two] Hebet-drinks"; PT 184 Pyr 106a (N): *ṯnm ///* "/// Tjenem-beer"; PT 185 Pyr 106b (N): *irp mḥ*(*.i*) *///* "/// Lower Egyptian wine".

[65] PT 73 Pyr 50c (W): *m-n=k ḥnq im*(*i*) *ḥr=f* "take the outflow which is from his (*sc.* Osiris's) face"; PT 183 Pyr 105b (N): *m-n=k ḥnq pr m wsir* "take the outflow which came forth from Osiris". Alternatively, one may view these passages as further instances of the motif of the beneficiary's being commanded to provide (*ḥtm*) himself with the outflow; see above n. 34.

[66] PT 85 Pyr 59c (W): *ḥtp wsḫ.t 2* "two broad-hall offerings"; PT 178 Pyr 103b (N): *ḥtp wsḫ.t 2* "two Broad Hall offerings".

[67] PT 82 Pyr 58b (N): *ḫ3w.t* "an offering table"; PT 175 Pyr 102a (N): *ḥtp 1* "a Hetep-altar".

[68] PT 171 Pyr 100f (W): *ḥnk.t* "a Henket-offering"; PT 196 Pyr 112 (N): *ḥnk*(*.t*) [*2*] "two Henket-offerings".

As exemplified by its relations with Subsequence 62, Sequence 23 is linked by a veritable network of connections with the thirty-some series mentioned above, beginning with their possession of its characteristic motifs. In these other series as well, there are many instances of a command that the beneficiary take the Eye of Horus (*im ir.t ḥrw*),[69] alongside an exhortation that he make it return (*sḫt*) to himself[70] and statements to the effect that the Eye is joined (*iʿb*) to him[71] and that it is in the brow of the beneficiary (*m*

[79] PT 41 Pyr 32a (W) (Sequences 2, 5; Subsequences 8, 12): *irṯ.t mr* "a jar of milk"; PT 42 Pyr 32b (W) (Sequences 2, 5; Subsequences 8, 12): *mnzꜣ šw* "empty jar"; PT 43 Pyr 33b (N) (Sequences 2, 5, 13; Subsequences 11-12): *mnw ḥḏ hꜣṯs ir*(*.t*) *wnm*(*.it*) "white-quartz Hatjes-wine-vessel, right eye"; PT 47 Pyr 36b (W) (Sequences 5, 13; Subsequences 12, 15): *irp mnw ḥḏ hꜣṯs 1* "wine, white-quartz stone-wine-vessel, one"; PT 48 Pyr 36c (W) (Sequences 5, 13; Subsequences 12, 15): *irp mnw km hꜣṯs 1* "wine, black-quartz stone-wine-vessel, one"; PT 49 Pyr 37a (W) (Sequences 5, 13; Subsequence 12): *ḥnq.t mnw km ḥn.t 1* "beer, black-quartz, one bowl"; PT 54 Pyr 39b (W) (Sequences 5, 13; Subsequence 12): *irp mnw ḥḏ ḥn.t* "wine, white-quartz bowl" (concerning *irp*, Barta 1963, p. 79 n. 127 notes the alternation between wine and beer for this element as it appears in offering list Type B); PT 55 Pyr 39c (W) (Sequences 5, 13; Subsequences 12, 16): *ḥnq.t mnw km ḥn.t* "beer, obsidian bowl"; PT 56 Pyr 40a (W) (Sequences 5, 13; Subsequences 12, 16): *ḥnq.t biꜣ ḥn.t* "beer, metal bowl"; PT 57 Pyr 40b (W) (Sequences 5, 13; Subsequences 12, 16): *ḥnq.t ḥtm ḥn.t* "beer, copper bowl".

[80] PT 34 Pyr 26a (N) (Sequences 2, 5; Subsequence 12): *nṯr*(*w*) *ṯꜣ 1* "one pellet of Netjeru-natron"; or Pyr 26e (W): *nṯr*(*w*) *šmʿ*(*i*) *ṯꜣ 5 nḫb* "five pellets of Upper Egyptian natron of Nekheb"; PT 35 Pyr 27e (W) (Sequences 2, 5; Subsequence 12): *nṯr*(*w*) *ḥꜣ ṯꜣ 5 š.t-p.t* "five pellets of Wadi Natrun Netjeru-natron (taken) around; or Pyr 27e (N): *š.t-p.t nṯr*(*w*) *ṯꜣ 5 mḥ* "five pellets of Lower Egyptian natron of Wadi Natrun".

[81] PT 199 Pyr 115c (M) (Sequence 31; Subsequence 84) (see below at n. 310); also *ḫ.t* in PT 172 Pyr 101a (T) (Sequence 26; Subsequence 61): *wdn ḫ.t t ḥnq.t pꜣ.t n T.* "consecration of things, of bread, of beer, of a Pat-cake—for Teti".

[82] *wdn* in PT 172 Pyr 101a (T) (Sequence 26; Subsequence 61): *wdn ḫ.t t ḥnq.t pꜣ.t n T.* "consecration of things, of bread, of beer, of a Pat-cake—for Teti"; and *sḏ* in PT 244 Pyr 249b (W) (Subsequence 84): *sḏ dšr*(*.t*)*i* "breaking of two red pots" (but on the reading see also Sethe 1926, p. 20; on the ritual, see Ritner 1993, pp. 144-147).

[83] PT 43 Pyr 33b (W) (Sequences 2, 5, 13; Subsequences 11-12): *ḥḏ km fꜣ.t* "a white jar; a black jar; lifting"; PT 50 Pyr 37d (N) (Sequences 5, 13; Subsequence 12): *fꜣ.t ḫft-ḥr=f ḏsr.t* "lifting before him; a sacred offering table".

[84] In Sequence 23 at PT 122 Pyr 77c (W): *m-n=k ir.t ḥr d.t*(*=i*) *n=k m rꜣ=k* "take the Eye of Horus, which I would put in your mouth for you". In recurring series related to it at PT 39 Pyr 31a (W) (Sequences 2, 5; Subsequences 8, 12): *d n=k s*(*i*) *m rꜣ=k* "put it into your mouth!"

and in its scent being diffused (*pḏpḏ/pḏ*).[85] As encountered already between Sequence 23 and Subsequence 62, other texts command the beneficiary to take outflow (*im ḥnq*),[86] and the beneficiary is distinctively addressed as "Horus who is in (*or*: as) Osiris N." (*ḥrw ỉmỉ wsỉr N.*).[87] Additional item specifications include another altar,[88] incense,[89] and libation instructions.[90]

To summarize, Sequence 23 is related to many other recurring series through a network of motifs, including expressions found to be characteristic of its own component texts through their repetition within it, and expressions found once in it but again in the

---

[85] In Sequence 23 at PT 25 Pyr 18c (W): *pḏpḏ sṯ ỉr*(*.t*) *ḥr r=k* "the scent of the Eye of Horus diffusing, being toward you!" In recurring series related to it at PT 26 Pyr 19a (N) (Sequence 3): (*ỉ*)*m ỉr*(*.t*) *ḥr pḏ.t.n=f m sṯ=s* "take the Eye of Horus the scent of which he (*sc.* Horus) diffused"; PT 36 Pyr 29b (W) (Sequences 2, 5; Subsequence 12): *ḥtm.t*(*ỉ*) *ḥr=k ỉm=s pḏpḏ* "provide your face with it suffused" (on *pḏpḏ* in this passage, see Otto 1960 vol. 2, p. 50 n. 14 with reference).

[86] Besides Subsequence 62, see PT 49 Pyr 37a (W) (Sequences 5, 13; Subsequence 12): *m-n=k ḥnq pr ỉm=k* "take the outflow which came forth from you"; PT 55 Pyr 39c (W) (Sequences 5, 13; Subsequences 12, 16): *m-n=k ḥnq pr m wsỉr* "take the outflow which went forth from Osiris".

[87] In Sequence 23 at PT 80 Pyr 55a (N): *ḥr ỉmỉ wsỉr Ne. pn* "O Horus who is in Osiris Neferkare"; Pyr 55b (N): *ḥr ỉmỉ wsỉr Ne. pn* "O Horus who is in Osiris Neferkare". In recurring series related to it at PT 26 Pyr 19a (N) (Sequence 3): *ḥr ỉmỉ wsỉr Ne.* "O Horus who is in Osiris Neferkare"; PT 30 Pyr 21b (N) (Sequences 3, 9): *ḥr ỉmỉ wsỉr Ne.* "O Horus who is in the Osiris Neferkare"; PT 107 Pyr 71a (= CT 855 VII 58c) (Sq6C) (Sequence 15; Subsequence 30): *ḥr ỉmỉ wsỉr N. pn* "O Horus who is in Osiris N."

[88] Besides Subsequence 62, see PT 50 Pyr 37d (W) (Sequences 5, 13; Subsequence 12): *ḏsr.t* "a sacred (offering table)".

[89] In Sequence 23 at PT 25 Pyr 18c (W): *snṯr ḫ.t* "incense; fire". In recurring series related to it at PT 28 Pyr 1644a (N) (Sequence 3): [*pꜣ*]*ḏ n*(*ỉ*) *snṯr* "[pell]et of incense" (Pyr 1644a appears in the field under N 393-2 to 395, i.e. under PT 26 to 28); PT 29 Pyr 20c (N) (Sequences 3, 9): *sṯ ỉr*(*.t*) *ḥr r Ne. pn* "scent of the Eye of Horus to Neferkare"; PT 36 Pyr 29c (W) (Sequences 2, 5; Subsequence 12): *snṯr tꜣ 1* "incense, one pellet"; PT 39 Pyr 31b (W) (Sequences 2, 5; Subsequences 8, 12): *zrw šmꜥ zrw mḥ* "*incense-beads of Upper Egypt; *incense-beads of Lower Egypt".

[90] In Sequence 23 at PT 32 Pyr 23b (W): *qbḥ nṯr*(*w*) *tꜣ 2* "libation and Netjeru-natron, two pellets". In recurring series related to it at PT 23 Pyr 16d (W) (Sequences 2-4; Subsequences 1-5, 83): *z*(*ꜣ*)*ṯ* "libate". This particular action instruction also occurs in a text of a different type, the resurrection text PT 436 Pyr 788a (M): *rḏi.t qbḥ* "giving libation".

other series. The broadly spread distribution of these motifs shows how the texts of the sequence are engaged in a wider semantic field. Because the statements characteristic of its texts are held in common with texts of the other series, one has grounds to regard them as a type—all the more so owing to their having been anciently organized into groups empirically perceivable today. The significance of these groupings will be explored below.

In addition to cementing its ties with other series, the process of showing that Sequence 23 has further connections with them has the concomitant result of expanding the inventory of the type's characteristics; it is not only the motifs repeated among the texts of Sequence 23 but also the motifs repeated between it and the other recurring series that help mark them as members of the type. That inventory may be augmented a bit more, because, besides possessing the points of contact with Sequence 23 so far mentioned, the recurring series related to it share even more motifs among themselves. To phrase this another way, they are related to one another just as they are related to Sequence 23, with some of their connections not held in common with the latter.

The other connections conform to the themes we have been encountering. The Eye of Horus is the means by which a priest fills (*mḥ*) the deceased,[91] it is said to be enduring (*rwḏ*),[92] and is that which pleases Seth, literally "stretches his heart" (*pḏ ib*

---

[91] PT 31 Pyr 21b (N) (Sequence 9): *mḥ.n kw ḥr m ir*(*.t*)*=f tm.ti* "with his Eye has Horus filled you completely"; PT 198 Pyr 114 (N) (Sequence 26; Subsequence 62): *mḥ.n kw ḥr tm.ti m ỉr.t=f m-tp w*ɜ*ḥ.t* "upon the oblation has Horus filled you completely with his Eye".

[92] PT 197 Pyr 113a (N) (Sequence 26; Subsequence 62): *ỉr*(*.t*) *ḥr tn rwḏ.t d*(*=ỉ*) *n=k s*(*ỉ*) "as for the enduring Eye of Horus, let me give it to you"; PT 244 Pyr 249a-b (W) (Subsequence 84): *ỉr*(*.t*) *tw nn* [*n*(*ỉ*)*t ḥr* | *rwḏ.t*] "this is the [enduring] Eye [of Horus]". There is only one text of a different type with this motif, the resurrection text PT 364 Pyr 614b (T): [*rḏỉ*]*.n n=k ḥr ỉr.t=f rwḏ.t* "Horus has [given] you his enduring Eye". On the sacramental exegesis (sakramentale Ausdeutung) of the passages of these three texts, see Assmann 1994a, p. 51.

stš),[93] and in its form as the goddess Tait (*t3i.t*), the deceased is clothed by it.[94] With the mouth of the deceased opened (*wpi r3*) by a priest speaking in the first person,[95] he is exhorted to not release a presented item (*imi sfḫḫ m*).[96] Additionally, two further kinds of

person,[100] a few more switching between the second and third,[101] and a few not making reference to him at all,[102] none shows an original first person pronoun or signs of editing away from the first. Since there is no evidence that any were originally in the first person, the component texts of the series related to Sequence 23 may be understood as having the sacerdotal performance structure.

To summarize this chapter thus far, it was seen that all but one text[103] in Sequence 23 shared distinctive content with other texts of the same series, the content being deemed characteristic of the sequence because of its repetition. Consideration of certain other recurring series revealed that they shared these and other motifs with Sequence 23. Because of their shared content and shared performance structure, the texts gathered together may be understood as members of a type. To phrase this another way, the hundred-plus texts gathered from the related series are homogeneous in character, with only one of them possessing no distinctive intertextual connection with the others.[104] Meanwhile, concerning the sole text of Sequence 23 for which no connection with its fellows was initially observed, PT 25, in the course of comparison with the different texts of other series, two connections between it and them were uncovered in passing: scent being diffused[105] and the item specification of incense.[106]

What is evident is that there is a confluence between shared characteristics and the way in which texts were anciently organized, as perceived through the recurrence of series of texts. Because the series considered thus far have been seen to be homogeneous in the manner described, and because on account of their homogeneity one may understand the texts concerned to be of a certain type, it follows that the process carried out here maintains a degree of faithfulness to the ancient typological sensibility. To phrase things bluntly, the members and attributes of this type of text are "authentic", more developed out of and conforming to the perceivable ancient groupings, and less a modern structure arbitrarily superimposed upon the ancient data.

To consider this last point in greater detail, the aim has been to discover shared characteristics among ancient groupings. To identify a type and its characteristics through approaching the texts as anciently gathered together is to engage in an "indirect constructive inference"[107] as to the shape of that type. It is indirect because there is no ancient critical discourse as to the composition and structure of types of religious texts; in spite of that absence, the process remains in touch with the ancient sensibility by following the indicator of recurring series.[108] In this way, the series serve as guidelines as to what texts belong to a type.

In this mode of pursuing the ancient type, one starts by assuming that the components of a given series are related, and then proceeds to find their relations. The opposite mode would be to pay no attention to recurring series, but rather would notice relations among texts and group them together on that basis alone. One might, for example, notice that the phraseology *ỉm ỉr.t ḥrw* "take the Eye of Horus" is quite

---

[107] See Fowler 1982, p. 52.

[108] See Parkinson 2002, pp. 34 and 108.

common, and therefore assume that it serves to mark a set of texts. However, while a great many texts of this chapter's type possess this phraseology, not all of them do. In Sequence 23, for example, the very first text does not have it at all, nor does the second text in the series, nor do thirty-two other texts in it. Indeed, *none* of the shared content of Sequence 23 is found in *all* of its component texts. What this fact illustrates is that not all of the traits characteristic of a type need be shared by every embodiment of it;[109] the lack of universality of characteristics is not a phenomenon peculiar to Pyramid Texts or to Egyptian texts in general:[110] it is an inevitable dimension of the process of genre identification. As a consequence, multiple points of contact are needed to identify types.

Naturally the purpose of identifying types, their characteristics, and their members is to provide a basis for interpreting specific exemplars, because types or genres provide a functional context within which a given text is experienced,[111] whether by a modern or ancient audience. And thus the meaning of each of the texts of Sequence 23, for example, is constructed in part by its membership within the type. The recognition of the type to which a text belongs is critical, because it is the general field of reference by means of which the specificity of a text is intelligible, while failure to recognize it can lead to misunderstanding.[112]

To signal in advance merely two utilities of the typological process, the identification of the members and characteristics of Old Kingdom types will constitute a concrete overview of the aggregate features of the corpus, and thus a detailed description

---

[109] See Fowler 1982, pp. 38 and 41.

[110] See Parkinson 2002, p. 34.

[111] See Fowler 1982, p. 38.

[112] See Parkinson 2002, p. 36.

of the structure of mortuary literature in that period. Moreover, by the rigor of the results, one is able to identify specific members of the same types appearing in the Middle Kingdom, too. In letting one make evidentially supported statements concerning the relationship between the two stages, the identification of types will provide insight into the history of the mortuary literature tradition.

2. FURTHER TEXTS WITH MATCHING CHARACTERISTICS

Because not all Pyramid Texts are attested within a recurring series, and because so far the investigation of texts has been confined to the same, one might suppose that still other members of the type remain to be identified. That supposition is borne out through an examination of texts without regard to their belonging to any recurring series. There are about thirty-nine more Pyramid Texts[113] bearing the performance structure and motifs characteristic of the type, as identified through examination of texts in Sequence 23 and the series related to it.

In adding these texts to the type, one now takes a step away from identifying its characteristics of performance structure and motifs and moves toward putting these characteristics to use; that kind of practical application is also what will occur at the end of this chapter, when Coffin Texts are examined. In the meantime, adding these thirty-nine Pyramid Texts to the type serves to accomplish three things. First, their inclusion in the typological structure serves the interests of comprehensiveness. Second, it helps show that membership in a type is not dependent upon belonging to a recurring series. And third, in considering texts beyond those that belong to recurring series to which I have drawn attention, the degree of distinctiveness of the characteristics will be implicitly

[113] PT 14-18, 20-21, fPT 57K-S, 59A, PT 97, 99-100, 103, 200-203, 417-418, 449, 597-598, 621, 623, 637, 680, fPT 741-742, 744, 751, CT 530 (for the occurrence of this text in M, see Pierre-Croisiau 2004, pp. 267 and 277 Fig. 14).

shown: for if it were to turn out that the motifs so far discussed also freely occurred in texts of the types to be discussed in following chapters, then they could not be said to be distinctive. Because such instances are by far the exceptions, they are nevertheless footnoted in all the references to motifs to follow—not because they are important, because as may be seen from what has just now been said they manifestly are not, by virtue of their constituting mere exceptions to the rule, but in the interests of "scholastic honesty", if it may be said. To speak of the exceptional appearances of these motifs in any greater detail is to award undue attention away from my point, which rests not on the incidental but on the actual structure that it defies: the frequency of evidence and its proportional preponderance.

But, at the risk of committing this very sin from another angle, some few preliminary words may be said about these "loose" texts, these thirty-nine not found in Old Kingdom recurring series but containing motifs found characteric of texts that are. First, the absence of these texts from any Old Kingdom series does not mean that they had not been anciently grouped with Old Kingdom texts; indeed, most of them seem to have been. Setting aside five of them that appear only in damaged and fragmentary contexts,[114] virtually[115] all of the rest are immediately juxtaposed to others of the same type.[116] By that juxtaposition one may conclude that they had been grouped together.

---

[114] PT 103, fPT 741-742, fPT 744, and CT 530.

[115] The two anomalies are PT 621 and PT 680.

[116] PT 14-21 (less PT 19, which is lost) on N/S/N; fPT 57K-S on Nt/S/N, in between Subsequences 27 and 31; fPT 59A on Nt/S/N, in between Subsequences 31 and 32; PT 97 on N/S/N, after Subsequence 41; PT 99-100 together on N/S/N; PT 200 on W/P/N, after PT 25 and before PT 244; PT 418 and PT 201-203 together on N/S/E; PT 417 on T/Ser/S, after PT 416 and before PT 418; PT 449 on P/S/Ne, after bPT 635A; PT 597 on N/S/E, after PT 414; PT 598 on M/S/E, after PT 24, and on N/S/E, after PT 29 and before Sequence 30; PT 623 on N/S/W, after PT 622; PT 637 on N/S/N, before Sequence 123; fPT 751 on Nt/S/N, before Sequence 138.

Moreover, only six of these texts are attested in more than one exemplar.[117] In other words, they are texts that perforce cannot be found in a recurring series, by virtue of the very definition of a recurring series. They do not recur; they therefore cannot appear in any recurring series.

As for the six in multiple copies, it is interesting to observe that they are juxtaposed to texts of the same type. The Egyptians put them next to texts of the same kind, but it is clear that their relationship to those texts was not sequentially fixed. These small few texts lie at one end of the spectrum.

At the other end of it lies the majority of texts of the present type: in multiple copies that do occur in a sequentially fixed relationship to other texts of the same type. With them, the texts of recurring series, one presumes that the fixity of their sequential ordering was dictated by tradition or canon; they not only belonged together, but they belonged together in a certain order. These two factors led to the repetition of series of texts in the first place. But there is a middle ground between the six loose texts on the one hand and the recurring series on the other: some components texts of recurring series are found recombined with different texts to produce new recurring series, as discussed and documented already in detail. The ramifications of the manipulation of order will be touched upon again in the next section, when a rationale for the dynamic driving the organization of these texts is advanced by way of two speculations. First, the sequential organization is driven by the traditionality of ritual. Second, the flexibility that runs counter to that order is a cultural tension opposite to that kind of traditionality; it is innovation, or creative editing, the manipulating of rites within the larger framework of a ritual field of performance. It is a question of invention in this corpus going on outside

---

[117] The six exceptions are fPT 57R, PT 418, PT 449, PT 597-598, and PT 637.

the pyramids even as texts were being brought in to them: it is a question of mortuary service physically performed by priests in the process of change and flux and modification in the pyramids. And with these two speculations as pictures of what I see, I imagine the rituals represented by these texts as well as the texts themselves being modified, growing, and alive contemporaneous with the end of the Old Kingdom. It is not a question of which texts are old or were older; it is a question of the Pyramid Texts being a manifestation of a living tradition, not a codified and stultified "canonized" religion, such as most forms of Judaism, Christianity, Islam with their fixed, canonized sets of texts. It is a tradition constantly shifting and changing because of the choices of priests performing their rites and composing the utterances of the rites. It is a living canon, a "dynamic canon", a "dynamic canonicity".

But to return to these thirty-nine loose texts and now rigorously cite their associations with the component texts of the recurring series discussed above, they show many instances of a command that the beneficiary take the Eye of Horus (*im ỉr.t ḥrw*),[118] and it is found in the brow (*ḥ3.t*) of the beneficiary[119] as in the brow of the god (*m ḥ3.t*

all.[138] Meanwhile, none of their Old Kingdom exemplars[139] shows any sign of editing away from the first, nor do any show a maintained first person. With no reason to understand the texts as having originally possessed the personal performance structure, one may assume that the sacerdotal structure exhibited by them is original.

3. Conclusions Concerning the Type

It has been seen that virtually all of the components of Sequence 23 possess intertextual connections with other texts within it, and that they furthermore share these motifs with texts of other recurring series. Still more connections were drawn out among the different texts of these series, with only one of their components lacking an intertextual connection with the others. As these texts have the same performance structure and share a set of motifs, they may be accepted as members of a type. Texts of this type are dominated by themes involving the Eye of Horus: it is received by the deceased, employed as an instrument and acted upon, placed in relation to the god Seth, and manipulated by an officiant speaking of himself in the first person. An offering context is evident in the deceased being exhorted to take and maintain other items and in multiple references to priestly actions involving the manipulation of items. The items to be manipulated are indicated in specifications of foodstuffs, ritual implements such as altars and incense, and regalia. Last of all, it may be correctly said that the motifs constitutive of these themes are distinctive to the type; they are not found dispersed indiscriminately throughout the Pyramid Texts but rather are concentrated in these

---

[138] PT 16, fPT 742.

[139] However, CT 530 does show exemplar disagreement between two of its Middle Kingdom exemplars, at VI 121e (T1C): *id.t nṯr r ỉwf.w=f* "with the censing of the god at his flesh" versus VI 121e (BH1Ox): *id.t nṯr r ỉwf.w=ṯ* "... your flesh". Concerning the complications of the editing of person in the Middle Kingdom, see above Chapter One n. 23.

texts.[140] To express this last point more concretely, it is exceptionally rare that any of these motifs appears in texts of the subsequent chapters; in that respect, they are *distinctive* to the type.

C. OFFERING RITUAL TEXTS

1. RELATIONS WITH OFFERING LISTS

When Maspero "discovered" texts inscribed in the later Old Kingdom pyramids, he was struck by the intimate connection many of them had with the items of offering lists of the sort one finds in a number of Old Kingdom tombs,[141] a connection consistently observed in the fundamental studies of offering lists appearing thereafter.[142] One of the most important kinds of offering lists, that of the sort[143] first appearing in the

---

[140] For exceptions, see above nn. 70, 92, 120, 123-124, 130-131, and 133-134.

[141] Maspero 1897, pp. 276-277. On the discovery of the Pyramid Texts, see Ridley 1983, p. 79.

[142] See Dümichen 1884, pp. 8 and 12-43; Bollacher 1911, pp. 37-40; de Garis Davies and Gardiner 1915, pp. 76-77; Junker 1934, pp. 69-96, within an account of Old Kingdom mortuary service beginning at p. 62; Barta 1963, esp. pp. 47 and 61 (at n. 57); Schott 1963, p. 103 with n. 4; Altenmüller 1971, pp. 76-90 and 278-279; and Lapp 1986b, esp. pp. 186-189.

[143] The "Listentyp A" of Barta 1963, pp. 47-50. The list in question is attested in a royal context no earlier than Sahure, as observed by Schott 1963, p. 103 with n. 3; see Borchardt et al. 1913, pl. 63. In connecting Pyramid Texts to offering lists, Baines 2004, pp. 22 and 28, is incorrect in associating the earliest attestation of Pyramid Texts to the reign of Sahure, since Debeheni certainly predates him; see the preceding note and Baines 1997, p. 133, for his dating of Debeheni's decoration from "the end of the 4th (Debeheni, Urk. I, 18-21...) to the early 5th dynasty".

early Dynasty Five[144] tomb of Debeheni (LG 90[145]), are tabular representations of the rites of the offering ritual,[146] a segment of mortuary service—representations with entries consisting only of the specification of items to be manipulated and priestly actions to be performed. And these entries correspond to elements of Pyramid Texts including those of the sort under discussion. In Sequence 23,[147] the items and actions specified in its ninety-one texts correspond nearly exactly to the third through ninetieth entries in Debeheni's list,[148] beginning with *sṯ-ḥ3b* "ceremonial-scent oil"[149] specified at the end of PT 72 and going on to finish in the sequence with *ḥnk.t* "a Henket-presentation"[150] at the end of PT

---

[144] The correct date of Debeheni's tomb is "end of Dynasty Four to early Dynasty Five"; the reasons for it are given at Barta 1963, p. 47; see also Hays 2002, p. 154 n. 8, and the following note. Kloth 2002, pp. 38-39, attempts to push Debeheni's date to the middle of Dynasty Five: "Die inschrift berichtet von der Errichtung des Grabes durch Mykerinos, und folglich wurde auch der (auto-)biographische Text selbst an das Ende der 4. Dyn. datiert. Mehrere Argumente sprechen jedoch für eine Datierung nicht vor die Mitte der 5 Dyn". More precisely, only one of her points can speak for such a date, and then only weakly, since it is based on the comparative dating of a type of decoration found in Debeheni's tomb: observing that scenes of the Butic burial occur in Debeheni, Kloth asserts that such scenes are not documented before the second half of Dynasty Five. If this kind of comparative dating were valid, then by another of her points (Kloth 2002, p. 39), where it is observed that Debeheni's representation of other events at the burial is similar to that of Tjeti (Kloth's Dok. 83), it would be necessary to make Debeheni's tomb contemporaneous with the latter, and thus date it to the beginning of Dynasty Six—about two centuries after the tomb's bestowal to Debeheni by Menkaure. The absurdity of the proposition undermines the utility of this kind of comparative dating and underscores the fact that the dating of the advent of a type of decoration is dependent on the dating of the tombs bearing it, and not the reverse.

[145] For the tomb, see Hassan 1943, pp. 159-184, esp. p. 176 Fig. 122 for the scene in question.

[146] Similarly, Willems 2001, p. 350; Willems 1988, p. 203; and Hassan 1948, p. 157.

[147] For an item-by-item comparison of Wenis's corresponding Pyramid Texts to offering lists of this kind, including Debeheni's, see Junker 1934, pp. 85-96.

[148] Items A3-A90 of the Type A list; see Barta 1963, pp. 47-50. Excepting items A22-24, which are damaged in Debeheni (see Barta 1963, p. 48; and Junker 1934, p. 87), the sole discrepancy is with the presence of PT 93, which does not always specify an item (e.g. not in W) and has no direct match in the Type A list. Note that PT 94 and 95 together correspond to item A25 (see Pyr 64a).

[149] PT 72 Pyr 50b (W).

[150] PT 171 Pyr 100f (W).

171. The most direct conclusion may be paraphrased from Gardiner: in the Pyramid Texts corresponding to the lists' entries, the predicative statements represent the "recitative dimension" of rites involving the manipulation of the objects specified both at the ends of the texts and in the lists.[151] Thus in one of our example texts from Sequence 23, bread is handled in conjunction with an address to the deceased:

PT 88 Pyr 60b (W)

60b *wsir W. m-n=k ir.t ḥr*
60b *ḫw n=k ti=f s*(*i*)
60b *t-wt*

60b O Osiris Wenis, take the Eye of Horus;
60b prevent that he (*sc.* Seth) trample it!
60b *wt*-bread.

The *wt*-bread, one may understand, is representative of the Eye of Horus in this text: here as elsewhere, the ubiquitous command to take the Eye of Horus is really a command to the deceased that he receive an item or action being offered.[152] Thus even in texts that do not have a correlate to lists of the sort first attested in the tomb of Debeheni, the same formulation may be identically interpreted:

PT 193 Pyr 110 (N)

---

[151] See de Garis Davies and Gardiner 1915, p. 76. On the four possible elements of an ancient Egyptian ritual representation, see Altenmüller 1974, p. 9; the elements are the ritual's recitation (the text), its title, notes or instructions, and a pictographic image; an offering list generally presents only one of these elements (the specification being the instruction), while offering ritual texts provide two (the specification and the recitation). It is technically incorrect to say, as at Baines 2004, p. 24, that offering ritual texts are an expansion of offering lists, merely adding verbs to the listed items; rather, offering ritual texts like offering lists give a simple, non-predicative enumeration of nominal items and actions, but to each of these they add a layer of information, predicative statements separate from the items. The description of Baines is also conceptually incorrect, since it implies that offering ritual texts were developed out of offering lists; on the contrary, they are both representations of the same complex (the offering ritual), with one form of representation simply being more complete than the other.

[152] Similarly J. P. Allen 1988, p. 39.

110 *ḏd-mdw*
110 *wsir Ne. m-n=k ir*(*.t*) *ḥr*
110 *d3p*(*=i*) *ṯw im*
110 *d*(*3*)*b 2*

110 Recitation.
110 O Osiris Neferkare, take the Eye of Horus;
110 let me present thereby to you.
110 Two figs.

The pair of figs mentioned at the end of the text are emblematic of the Eye of Horus, and as such the deceased is commanded to take it.

That the items specified at the ends of texts of this type are to be manipulated becomes evident when actions are specified in conjunction with them, as in the following:

PT 43 Pyr 33 (W)

33a (*i*)*m ir.ti ḥr km.t ḥḏ*(*.t*)
33a *iṯ n=k sn*(*i*) *r mḫnt=k*
33a *sḥḏ=sn ḥr=k*
33b *ḥḏ km f3.t*

33a Take the Eyes of Horus, black and white;
33a take them to your forehead,
33a that they make your face bright!
33b A white jar; a black jar. Lifting.

One may consequently imagine that the black and white jars, each corresponding to Eyes of Horus, here likewise black and white, are to be lifted in association with the recitation.

Naturally one may ask after the identity of the one doing the lifting, not to mention the speaking. Throughout this chapter it has been stated without explanation that it is a priest who is involved. That this is the case is explicit in an instruction found

attached to the beginning of a Middle Kingdom version of one of the texts of this type—*ḏd-mdw in ḫr*(*i*)-*ḥ*(*ꜣ*)*b.*(*t*) "recitation by the lector priest"[153]—and a reciter's involvement in the presentation of the items to be taken by the deceased is often made explicit by his first person reference to the fact.[154] In this light, then, the several instances of the motif of the speaker bringing the Eye of Horus are to be understood: making reference to himself, a priest has brought an item, a recitation is made, and the specified item is presented to the deceased. In combining references to speaker and beneficiary with actions performed by the former for the latter, the sacerdotal performance structure is vividly fleshed out with the manipulation of the items regularly specified in these texts: the recitations' words spring to life with deeds performed concurrently with their utterance.

Both the manipulation of items and speaking are evident in pictorial depictions typically juxtaposed to offering lists, beginning with Debeheni's, where officiants are shown making recitations and presenting vessels and bread,[155] with the same sorts of actions being performed by figures accompanying the offering list in the sanctuary of Pepi II's pyramid temple.[156] The juxtaposition of the offering list's words to the images of

In texts of the present type, a first person officiant appears also at PT 20 Pyr 11a-12b; PT 25 Pyr 18c; PT 29 Pyr 20a; PT 37 Pyr 30a; PT 39 Pyr 31a; PT 48 Pyr 36c; fPT 71F Pyr 49+6; fPT 71H Pyr 49+8b; fPT 71I Pyr 49+9; PT 100 Pyr 67b; PT 106 Pyr 69a-70a; PT 193 Pyr 110; PT 623 Pyr 1756; fPT 634 Pyr 1793; bPT 635A Pyr 1794a-b; PT 637 Pyr 1800b-c; fPT 744 Pyr 2274; and fPT 751 Pyr 2281.

[155] See Lapp 1986b, p. 147 Fig. 26 (1, 2, and 3).

[156] See Jéquier 1938, pl. 61. Lapp 1986b, pp. 185-186, offers a slightly different reconstruction.

priests can be compared with the juxtaposition of a photograph to its caption; between the latter[157] as with the former,[158] there is an inextricable relationship: the lists and images together represent mortuary service;[159] they are representations of the performance of cult for the deceased.

Based on the correspondence between offering lists and Pyramid Texts of the type under discussion, and based on the pictorial information of priests conducting rites for a deceased beneficiary in association with such lists, the significance of the texts could not be more clear: they are firmly situated in mortuary service; they represent a series of rites performed by priests on behalf of the deceased. And given that the texts are dominated by an offering ritual topos,[160] in which an item is manipulated by a priest, while the royal beneficiary is asked to take the Eye of Horus of which that item is an emblem, it is fair to refer to them as *offering ritual texts*.

As fair as that term is, an ancient term may be more appropriate. Four decades ago Schott observed the explicit association of the god Thoth (the lector priest *par*

---

[157] See Barthes 1977, p. 16, on the inextricable relationship between the photograph and its caption.

[158] See Assmann 1987, p. 40, where it is averred that canon and habitus bind image to writing and writing to image, "die Bildhaftigkeit der Schrift" and "die Schrifthaftigkeit des Bildes". On the habitus, see Bourdieu 1998, p. 170.

[159] Based on the axiom of Arnold 1962, p. 4, concerning "Bindung einer Szene an den Ort" of its performance, one may assume that it was in the place of representation that the things represented were carried out. On this room serving as cultic offering space, see Arnold 1977, pp. 4-5, owing to the presence of the falsedoor there; similarly Barta 1967, pp. 50-51, though also making reference to the character of the reliefs in the sanctuary of Pepi II. .

[160] As J. P. Allen 1994, p. 12, observes, that they are ritual texts is obvious, because they are intended to accompany offerings. That they are ritual texts is held also by Altenmüller 1974, p. 8, on the basis of the ubiquitous *ḏd-mdw* "recitation" instruction.

excellence[161]) with offering lists beginning in the Middle Kingdom,[162] as captions then refer to it as *zš.w pw ỉr.n ḏḥw.tỉ* "this writing which Thoth made".[163] And based upon this association, the term *zš n*(*i*) *mdw-nṯr mḏ3.t n*(*i*)*t ḏḥw.tỉ* "the hieroglyphic writing, the Book of Thoth"[164] in a Coffin Text is interpreted by Willems to refer precisely to the offering list.[165] Confirmation—or rather, reverse permutation—is found in a recent discussion by Mathieu through his associating the term *mḏ3.t nỉt ḏḥw.tỉ* with the term *mḏ3.t nṯr* "Book of the God", the god in question being understood by him as Thoth.[166] In

---

[161] The god's sacerdotal attribute has been recognized for a long time, as by Boylan 1922, p. 143; Schott 1963, p. 107 with nn. 1-2; Helck 1992, pp. 144-145; Assmann 2000, p. 40; and Hays 2002, pp. 164-165 with nn. 85 and 88. In the offering ritual texts of this chapter, priests ministrating to the deceased are addressed as Thoth at PT 17 Pyr 10b (N): *ḏḥw.tỉ d n=f tp=f ỉr=f* "O Thoth, place for him his head at it"; and fPT 71F Pyr 49+6 (Nt): *ḏḥw.tỉ ỉn sw* "O Thoth, bring it!" In a resurrection text (on which see the next chapter), an officiant identifies himself as the god, at PT 468 Pyr 905a (P): *ỉnk ḏḥw.tỉ* "I am Thoth" (note that exemplar N shows : *ỉnk ḥr* "I am Horus"). In resurrection texts in the Coffin Texts, officiants continue to take that role, as at CT 50 I 230f—231 a-b (B12C): *ḏỉ=ỉ m3=ỉ ṯw | ỉnk ḏḥw.t*[*y | z3*] *z3*[*=k*] "let me cause myself to see you, for I am Thoth, [the son of your] son". The god's priestly role is also expressed at CT 102 II 106e (B1C): *ḏỉ=k tpỉ-mḏ m-ḫnt wr mỉ ḏḥw.tỉ* "may you give (an offering to me) at the decade festival, before the Great One just as Thoth (does)"; and his association with lector priests at CT 590 VI 210f-g (S2P): *ỉn ḏḥw.tỉ ỉn ḫrỉw-ḥ3b.t | šdd.w sw m šm.wt m dw3.wt* ... "it is Thoth who brought the lectors, those who recite it in the actions at dawn ..."

[162] See Schott 1963, pp. 104-110. As observed by Grimm 1986, p. 106, offering lists could also receive the label *dbḥ.t-ḥtp ʿpr.t* "the outfitted offering request", lit. "the equipped what is requested of offering(s)".

[163] Schott 1963, p. 105 IIi (S5C): *ỉr n=k ḫ.t ḫft zš.w pw ỉr.n ḏḥw.tỉ n wsỉr m pr mdw-nṯr* "let the ritual be done for you according to this writing which Thoth made for Osiris in the house of the god's word".

[164] CT 225 III 240b (B2Bo).

[165] Willems 2001, p. 350. For a prospectus on the forthcoming publication of the Demotic Book of Thoth, evidently of Roman date, and certainly of content contrastive to offering lists and offering ritual texts, see Jasnow and Zauzich 1995, pp. 89-90.

[166] Mathieu 2004, 252; see also Dobrev et al. 2000, 277. In addition to the evidence adduced there, one may add the intimate association between the lector priest and the *mḏ3.t nṯr*, as at Pap. Berlin 3029 (= de Buck 1938a) 14-15: *ḫrỉ-ḥ3b.t ḥry-tp zš-mḏ3.t-nṯr* "the chief lector priest, the scribe of the god's book," in light of Thoth's identity as the lector priest of the gods, concerning which see Schott 1963, 107 with n 2.

the present context the latter phrase is of paramount significance, for it was found painted in large, hieratic figures on the support blocks behind the dressing stones of the *north*[167] wall of the sarcophagus chamber of the Old Kingdom pyramid of the queen Ankhesenpepi II; in all probability, the signs were to announce the intention of inscribing texts of that designation on the dressing stones.[168] And, as noted above,[169] it is precisely on that wall that recurring series of offering ritual texts regularly appear.

But now being returned to the burial chambers, one is suddenly struck by a rupture: while it is easy to imagine that the rites represented by offering lists and their accompanying pictorial depictions were performed above-ground, in the subterranean sarcophagus chamber it is much more difficult to do so. At the most, the performance of rites in the burial chambers[170] would have ceased from the moment that stone plugs were set in place in the cramped corridors leading down to them. Indeed, whether such rites were ever performed there at all, what is clear is that the copies of texts chiselled on the dressing stones cannot have served the same function as whatever copies were employed by priests: they are pictorially depicted holding and reading from scrolls,[171] not from walls.

---

[167] See Dobrev et al. 2000, p. 288, Figs. 7-9.

[168] Similarly, Dobrev et al. 2000, p. 276.

[169] See above n. 47.

[170] That some kind of offering ritual might have been performed in the sarcophagus chamber is indicated by the presence of a probably First Intermediate Period letter to the dead on a bowl included among offering pottery deposited with a corpse, together with the fact that the probable context of transmitting letters to the dead was an offering ritual, as argued by Willems 2001, pp. 345-352.

[171] See Lapp 1986b, pp. 180-192, Figs. 56-78.

Moreover, in the context of the actual performance of the offering ritual by living priests, a text serves as a cue to the words to be pronounced; in the attested context of a text as inscribed in the total darkness of rooms occupied only by the dead, its function is necessarily something else again: the ritual cue transferred to the wall has been transformed into the static, physically textual[172] representation of ritual action, its efficacy dependent upon the magical power of the unspoken, written word.[173] Their role is not as a mnemonic, but is to serve as "actualisations monumentales", to borrow a phrase of Vernus.[174]

Inside the tomb, no priest speaking of himself in the first person addresses the deceased; no priest lifts objects to him; no living eyes in the darkness read the carved lines to remember what is to be said during the course of a rite. The text has gone from being a script for a rite to being purely a representation of it, its function now independent of its performance by humans.

---

[172] As the sacred text in its physical manifestation synthesizes the real and imaginary of human experience, it is neither exclusively textual nor exclusively physical; compare Meskell 2004, p. 44.

[173] Ritner 1993, pp. 36-38, establishes the link between Egyptian magic and writing. See also Sethe 1908-1922, vol. iv, p. 124. The efficacy of the unrecited word is implicit in the Dynasty Four inscription of Neferma'at (Urk I 7, 11): *swt ir nṯr.w=f m zš n zin=f* "he is one who made his gods (i.e. hieroglyphs) into a writing that cannot be erased" and is explicit at PT 262 Pyr 333b-c (T): *n iw.n=f is ḏs=f | in wp.wt=ṯn in.t sw mdw-nṯr siˁ sw* "it is not that of himself he comes; it is your message (i.e. spell) which brings him; it is the hieroglyphs which make him rise up." At the same time, the efficacy of the spoken word is present at PT 437 Pyr 795b-c (P): *ḏd rˁ sʒḫ.w=f P. pn... | szn n=k ˁʒ.wi gbb pr=k ḥr. ḫrw inp sʒḫ=f ṯw m ḏḥw.ti* "what Re said is that he would make Pepi an *ʒḫ* ... the doors of Geb are spread open to you, even that you go forth at the voice of Anubis, that he make you an *ʒḫ* as Thoth".

[174] Vernus 1996, p. 144. Baines 2004, p. 21, covers the four-fold purpose of the texts in general: as decoration; as script for recitation in the next world; as inherently performative through their sheer existence; as a mark of social status.

2. OFFERING RITUAL TEXTS AS A TRADITION

Thus, so far as may be seen, the first root of the invention of the mortuary literature tradition was in the transferral of texts from one setting in life to another.[175] The origin of these texts in ritual, by nature a formalized and repetitive construct,[176] helps explain the significance of recurring series. Their fixed order and composition was predicated by the traditional character of the rituals they represented. And yet, with the variability of the total inventory of offering ritual texts in each pyramid, with the overlaps observed in series such as Sequences 2 and 5 and Sequences 5 and 23, and with the groups of offering ritual texts not attested in any recurring series, it is evident that the rituals were subject to modification, presumably not only in their inscriptional representation in the sepulchral chambers but also in their performance in above-ground cult places. What one observes is a process of adopting and adapting pre-existent material,[177] with the play between the static and the variable underscoring the living character of the tradition as it first became manifest. Offering ritual texts helped forge a tradition because texts of this type were inscribed in each of the pyramids from Wenis on, but it was a flexible tradition, continually enlivened by modifications in composition and order.

From the recurrence of the texts of Sequence 23 in the tomb of the Middle Kingdom official Senwosretankh, from the Middle Kingdom transmission of further

---

[175] Compare Mathieu 1999, pp. 13-22.

[176] On formalization as a characteristic of ritual, see Rappaport 1999, p. 29; on degrees of formalization and repetition as characteristics, see Tambiah 1981, p. 119.

[177] Compare Bell 1997, p. 83.

instances of shorter segments of Sequence 23,[178] and from passing mention made above to other Middle Kingdom sources bearing other recurring series of offering ritual texts, it is self-evident that the type was transmitted after the Old Kingdom: the tradition continued. And inasmuch as the tradition's dynamic of change is an indication of its life at its advent in the earlier period, then so also did it enjoy continued life in the later, for the same dynamic was manifest then as well. To continue with Sequence 23 as a touchstone, there are sequences not attested before the Middle Kingdom that take some of its components and recombine them with others (in the same way that Sequences 2 and 5 were seen to share some of its texts),[179] and there are new sequences consisting entirely of components of Sequence 23 but in different order.[180] The recombination and rearrangement of its texts in the Middle Kingdom concretely show that arrangements of offering ritual texts remained subject to editorial modification; the susceptibility to modification is a token of the tradition's dynamism.

The Middle Kingdom editors of mortuary literature heartily helped themselves from the platter of Old Kingdom offering ritual texts: of the two hundred and forty or so

[180] Sequence 11 consisting of PT32 PT25 on Sarenenutit Table and M1Ba/FR; Sequence 24 consisting of PT72-77 PT25 on B2Bo/H and Pediniese/427-434; Sequence 25 consisting of PT72-77 PT81 on M1Ba/FR and Sq A. In this context, note may also be made of a further sequence not consisting of any components of Sequence 23, also newly attested in the Middle Kingdom: Sequence 21 consisting of fPT71G fPT57A-D on Sq3C/FR and Sq1Sq/S/E.

texts identified in this chapter, about two hundred were copied onto Middle Kingdom sources in more or less verbatim form.[181] And a tangible measure of the importance of some of them to the Middle Kingdom officials making use of them is in their tremendously high frequency of attestation. For example, PT 77—*r³ n*(*i*) *mrḥw.t* "an utterance of unguent"[182]—is attested no less than twenty-five times.[183] Considering that only three Coffin Texts[184] are more frequently attested than it in the Middle Kingdom,[185] it is difficult to exaggerate its importance.

A further indication of the vibrant character of the tradition is in the production of variants. Newly attested in the Middle Kingdom, these texts are closely related to Pyramid Texts in content and structure, but their modifications are extensive enough to warrant them being regarded as separate texts rather than more or less exact copies of older ones. For example, CT 64 may be compared to the text of which it is a variant, PT 32:

PT 32 Pyr 22-23 (W)		CT 64 I 275-276b (T2C)

PT 32 Pyr 22-23 (W)

22a This libation of yours, O Osiris, this libation of yours, O Wenis,
22a which went forth because of your son, which went forth because of Horus—
22b I have come, even bringing you the Eye of Horus,
22b that your heart be refreshed in having it,
22b I bringing it
22b under you and your sandals.
23a Take the efflux which came forth from you
23a ceaselessly (lit. without your heart becoming tired of it).
23b Recite four times. Come! Let the voice be sent forth to you!
23b Libation and Netjeru-natron, two pellets.

CT 64 I 275-276b (T2C)

I 275b-c This your libation, O my father, this your libation, O Osiris,
I 275d-e which came to you from your son, which came to you from Horus--
I 275f I have brought it to you
I 275g that you may make your heart sweet by it
I 275h I have brought you the Eye of Horus
I 275i that you may make your heart sweet by it
I 275j like that which you smite
I 275j under your sandals.
I 276a Indeed I am for you even as your *interpreter,[186]
I 276b giving water to you in the Wag ceremony and Dhehutit ceremonies.
I 276c Giv[ing water] to an *3ḫ*.

[186] Following Assmann 2002, p. 341, with "Dolmetscher".

On top of the completely different endings for these libation recitations, the list of modifications to their initial clauses is long—the replacement of vocatives (*wsir* > *it*(=*i*)*; h3 N.* > *wsir*) and verbs (*pr.w* > *iw*), the addition of a dative (-- > *n*=*k*), the conversion of a predicative verb form to a non-enclitic particle (*iw.n*(=*i*) > *m-k*), the conversion of a noun phrase to a pronoun (*ir.t ḥr* > *s*(*i*)), and more. They are not the same text. And yet structure and meaning is paralleled to such an extent that their genealogical relationship is unmistakable. With such genetic affinities present in several other Coffin Texts,[187] one has a further indication of the tradition's continued activity in the Middle Kingdom. It was not a matter of the mere mechanical transmission of offering ritual texts from the Old Kingdom; the authors of these texts newly attested in the Middle Kingdom were familiar with the old ones, and they were producing new ones based on them. It was a living tradition.

Very closely allied to the phenomenon of the production of variants of Old Kingdom offering ritual texts was the generation of completely new texts of the same type, as indicated by their possession of motifs distinctive to it and by their being of the same performance structure. The following will serve as illustration:[188]

This text has three motifs found among offering ritual texts: a command that the beneficiary take the Eye of Horus (*ỉm ỉr.t ḥrw*; twice), a statement to the effect that it is to be put in his mouth (*rdi m rꜣ*),[189] and the specification of various foodstuffs. The first is of course nearly ubiquitous to offering ritual texts. The second motif is not especially common, occurring in only two Pyramid Texts, with neither of them so similar as to justify naming CT 923 as a variant of one or the other of them.[190] The extensive itemization in CT 923 offers a glimpse as to the function of this text: the items match those specified in PT 161-167, 169-172: while the items to be manipulated remain the

[190] PT 39 Pyr 31a-b (W): *W. m-n=k ỉr(.t) ḥr z.t=f r=s ỉn(.n=ỉ) n=k s(ỉ) d n=k s(ỉ) m rꜣ=k \| zrw šmꜥ zrw mḥ* "O Wenis, take the Eye of Horus, to which he went; To you have I brought it; put it into your mouth! | *Incense-beads of Upper Egypt; *incense-beads of Lower Egypt." PT 122 Pyr. 77c-d (W): *wsỉr W. m-n=k ỉr.t ḥr d.t(=ỉ) n=k m rꜣ=k \| ỉdꜣ.t ḥꜣ=k 4* "O Osiris Wenis, take the Eye of Horus, which I would put in your mouth for you. Four Idat-cakes around you."

same, they are to be offered in bulk—*nn r-ꜣw.w* "these at length"—and a single recitation is to take the place of the more variegated recitations proper to each item in their corresponding Pyramid Texts. With these statements and a handful more afterwards, CT 923 is not a variant of any single offering ritual text; it is a new text dominated by motifs characteristic of that type.

In the recombination and rearrangement of offering ritual texts to yield new series, in the production of variants of Old Kingdom offering ritual texts, and in the generation of other texts of this type, it is clear that the tradition invented with the inscription of offering ritual texts in the pyramids lived on into the Middle Kingdom.

D. SUMMARY

Offering ritual texts as a type are characterized by a sacerdotal peformance structure and a set of distinctive motifs, these motifs centering on themes of the beneficiary's receiving the Eye of Horus, with it being acted upon by him, put into relation with the god Seth, and manipulated as an offering by an officiant speaking of himself in the first person. The Eye of Horus is emblematic of various actions and items specified in these texts, including foodstuffs and inedibles. As many of these texts are intimately related to offering lists, and as these offering lists are representative of offering rites performed during mortuary service, it is evident that they were adapted from a different setting in life for inscription in the tomb. In their subterranean setting, their function was to actualize in stone the rites they represented, their efficacy residing solely in their inscriptional character and not in their performance by priests. The ritual script made into a literary reification of ritual is the first portion of the invention of the mortuary literature tradition. In dynamic motion in the Old Kingdom, that tradition continued vibrantly in the Middle Kingdom.

CHAPTER THREE

RESURRECTION TEXTS

A. SEQUENCE 84

The west wall of the sarcophagus chamber of the pyramid of Pepi II includes the long series of texts PT 446-448, 450-451, 367-368, 589-590, 426-434, 443-444, 454, 425, 455, 452-453, and 356; it is tangibly identifiable as a unit through the repetition of all of its texts in identical order in the tomb of Neith, appearing there also on the sarcophagus chamber's west wall.[1] This recurring series, called Sequence 84, is evidently the product of a conscious grouping, because its recurrence shows that its texts are transmitted together rather than individually, and because they are homogenous in character: they share characteristics of content, and they may be understood as pertaining to the same performance structure.

One of the shorter component texts of Sequence 84 can serve as a starting point for consideration of the characteristics shared among the component texts of the series.

636a O Osiris Merenre,
636a-b this is Horus within your embrace saving[2] you,
636c (it) being *3ḫ* for him again because of you, in your name of 'horizon, you in whom Re ascends.'
636d You have wrapped your arms around him, even around him;
636d he will not be far from you,
637a Horus not permitting that you suffer.
637a-b Horus has placed your enemy under your feet that you live:
637b Horus has given you his children,
637c that they set out bearing you, none of them failing to raise you up.[3]
638a Your mother Nut has spread herself over you, in her name of 'Shet-Pet':[4]
638b she has caused that you be a god to your opponent, in your name of 'god,'
638c protecting you from everything adverse, in her name of 'Great Protectress,'[5]
638d for you are the eldest of her children.
639a Geb is satisfied with you, for he loves you,
639a-b he having protected you, he having given you your head,
639b having caused that Thoth join you,
639b with what is against you coming to an end.

---

[2] See Griffiths 1951, pp. 32-37 for the sense of *nḏ* as "to save".

[3] Lit. "without one of them turning back while raising you up".

[4] See Billing 2002, pp. 91-93, for the association of *š.t-p.t* with natron and its bestowal, and a theological explanation of it as the night sky.

[5] Or "Great Joiner"; for translating *ḫnm.t wr.t* in this fashion, compare the translation "die große Vereinigerin" for the same epithet at Altenmüller-Kesting 1968, p. 83. For further justification of such translations, in addition to the term's interpretations as "sieve" and "pillow", see Billing 2002, pp. 179-180.

Since the beneficiary figures into PT 368 solely as addressee, the text conforms to the sacerdotal performance structure. Without exception, the same holds true for the other component texts of Sequence 84: altogether, twelve strictly speak to the beneficiary in the second person, as here,[6] two both refer to him in the third and address him in the second,[7] ten refer to him only in the third,[8] and two make no reference or address to him at all.[9] Since none of Sequence 84's components show the first person, nor do any offer signs of editing of person, there is no reason to believe that their performance structure ever differed from their inscribed forms. Consequently, the components of Sequence 84 may be regarded as having the same performance structure as was seen with offering ritual texts.

And yet the shared content of the texts of Sequence 84 distinguishes them from offering ritual texts. All but two[10] of the components of Sequence 84 bear one or more intertextual connections with their fellows, with the motifs building themes of the reconstitution of the corpse and the beneficiary's resurrection, achieved through the protective and recuperative activities of divinities—especially Nut and Horus—yielding the beneficiary's perfected state and exalted identity.

---

[6] PT 356, 367-368, 425-426, 447, 451-454, 589-590.

[7] PT 450 and 455.

[8] PT 446, 448, 427-429, 431-432, 434, and 443-444.

[10] PT 426 and 433. However, a connection between PT 426 and other texts of the present chapter is drawn out below at n. 119.

A cross-section of the motifs characteristic of the series are found in PT 368: The reconstitution of the corpse is explicitly indicated toward the end of the text, when a male god joins (*iʿb*, *dmḏ*)[11] the beneficiary,[12] and perhaps implicitly when Nut protects him, here indicated by the verb *ḥnm* "to protect, join, embue", though in other texts of the series the verbs *sdḫ* "to conceal" or *ḫwi* "to protect" can be employed.[13] Her protective and reconstitutive role are more clearly manifest in the verbal imagery of her spreading herself over the deceased (*pšš nw.t ḥr*).[14] And in embuing virtue, she makes him a god to his enemy (*rḏi/dw nw.t m nṯr n ḫfti/stš*),[15] with her benevolence justified by his being the

---

[11] Strictly involving the verbs *iʿb* and *dmḏ* with the beneficiary himself as direct object and a specifically male god as agent, this motif may be distinguished from others, such as the beneficiary himself being drawn together (*dmḏ, iʿb, inq*) specifically by a goddess, or he himself being drawn together (*dmḏ, iʿb, inq*) by an unspecified agent, or the beneficiary's body or body-parts being drawn together (*inq*), gathered together (*dmḏ*), joined (*iʿb*), collected (*sꜣq*), or bound up (*ṯz, dmꜣ*).

[12] Also at PT 356 Pyr 577b (T): *rḏi.n ḥr dmḏ ṯw nṯr.w* "Horus has caused that the gods join you"; PT 367 Pyr 635a (M): *dmḏ.n=f ṯw* "he (*sc.* Horus) has joined you"; and PT 448 Pyr 830a (P): *iʿb {i} P.* "join Pepi, (O Thoth)".

eldest of her children (*wrr ỉmỉ ms.w nw.t*)[16]—in other words Osiris. In another text of the sequence, her own exalted virtue is indicated by the phraseology *ȝḫ n* "it is *ȝḫ* for", just as in PT 368 it is applied to Horus.[17] That god figures prominently throughout the series; in this text and in others he is said to save the beneficiary (*nḏ ḥrw*),[18] and to specifically put his enemies under him (*rḏỉ/dw ḫr*).[19] In association with these gods and their actions, the beneficiary's exalted status and identity receive extensive attention, when a divine being is said not to be distant from him (*bỉȝỉ/ḥr r*),[20] with negative attributes pertaining to him being eliminated (*tm/ḥtm ỉrỉt*),[21] and through the direct expression of his identity in the "name formula",[22] the phrase "in your/his name of" (*m rn=k/rn=f*).[23] In short, there is a

network of connections linking PT 368 to a sum total of thirteen other members of Sequence 84.

In its plethora of relations to the other components of Sequence 84, PT 368 exemplifies the interrelated character of the texts of the series. They are related together not only by belonging to the same ancient grouping but also through sharing content. Outside of PT 368, there are yet more connections among the texts of this series, contributing to the themes of resurrection and reconstitution, with divine actions performed for the beneficiary, especially by Horus and Nut (whose own attributes are clarified), and with the beneficiary's status and identity developed. Above all, there are exhortations to the beneficiary that he arise (*ḥ*), as with *ḥ3 P. pw ḥ* "O Pepi, arise!"[24] Literally a resurrection formula, such statements complement further references to the reconstitution of the body: the beneficiary's limbs (*.wt*) or bones (*qs.w*) are joined together (*ib*) by various agents, including himself and others,[25] and he is commanded to receive his head (*šzp tp*).[26] The beginning of Nut's involvement with the processes of the

---

[24] PT 452 Pyr 841a (P). The motif also occurs at PT 451 Pyr 837a-b (P): *i.rs tz tw | ḥ* "awaken! Raise yourself! Arise!"; PT 453 Pyr 844a (P): *ḥ ir=k* "arise!"

[25] PT 367 Pyr 635a (M): *ib.n n=k ḥr .wt=k* "Horus has joined your limbs to you"; PT 447 Pyr 828b (P): *ib=s n=k qs.w=k* "let her (*sc.* Nut) join your bones to you"; PT 450 Pyr 835b (P): *ib=s n=k qs.w=k* "let her (*sc.* Nut) join your bones to you"; PT 451 Pyr 840b (P): *ib n=k qs.w=k šzp n=k tp=k* "join your bones to yourself!"; and PT 452 Pyr 843a (P): *šzp n=k tp=k ib n=k qs.w=k* "receive your head! deceased's revival is marked by her coming to him as his mother (*i nw.t/mw.t*),[27] and her physical protection is again visually evoked when she is said to fall upon him (*ḫr ḥr z3*).[28] Finally, her personal attributes are developed when she is said to be within her mother (*m mw.t*),[29] to be powerful (*sḫm*),[30] and to have appeared as king of Lower Egypt (*ḫʿi m bi.ti*).[31]

Before considering the beneficiary's characteristics as further developed by the texts of Sequence 84, it may be noted that aggressive action by Horus is again evident, as with *ir.n ḥr ir=f* "when Horus acted against him (*sc.* Seth)",[32] and that god's actions are

[36] PT 367 Pyr 635b (M) and PT 590 Pyr 1610b (M): *n ḥnn.t(i) im=k* "there being no discord in you", understanding *ḥnn.ti* (see the orthography of the word in the same motif at PT 364 Pyr 617b) to be a masculine singular nisba built from a nomen actionis *ḥnn.t*; alternatively, with J. P. Allen 1984, §486b, one may understand *ḥnn.ti*as a passive *sḏm.ti=f* form, with unexpressed subject.

[37] PT 451 Pyr 837b (P): *wꜥb=k wꜥb kꜣ=k* "may you be pure, your Ka be pure"; Pyr 839a (P): *wꜥb.t(i) wꜥb kꜣ=k* "be pure, and may your Ka be pure"; PT 452 Pyr 841a (P): *wꜥb=k wꜥb kꜣ=k* "may you be pure, and your Ka be pure".

[38] PT 447 Pyr 829c (P) and PT 450 Pyr 836c (M): *srwḏ=k pr=k m-ḫt=k ḫw=k ms.w=k m-ꜥ iꜣkb* "that you make your house flourish after you, and that you keep your children from sorrow". On the activity of mourning in the Pyramid Texts, see Abou Ghazi 1968, pp. 157-164.

Since all told twenty-two of twenty-four texts in Sequence 84 share the expressions identified above,[39] it is clear that they are related to one another in content. And yet, although they share the sacerdotal performance structure with offering ritual texts, they do not share these intertextual connections with them.[40] Thus, even as that content draws the texts of Sequence 84 together, it distinguishes them from other texts.

B. TEXTS OF MATCHING CHARACTERISTICS

The two pyramids bearing Sequence 84 date toward the end of the Old Kingdom, but that sequence's characteristics of performance setting and motifs are broadly distributed throughout the earlier sources. A first indication of that wider distribution is in attestations of shorter segments of Sequence 84: subsequences of it are found on the west walls of the sarcophagus chambers of the earlier pyramids of Pepi I[41] and Merenre,[42] and later on a fragment from the pyramid of Ibi,[43] in Middle Kingdom sources including

---

[39] See above n. 10.

[40] For reference to exceptional appearances of the motifs discussed in this chapter in texts of other types, see below n. 286.

[41] Subsequence 121 consisting of PT367-368; Subsequence 122 consisting of PT426-434; Subsequence 127 consisting of PT443-444; Subsequence 132 consisting of PT452-453 PT356; and Subsequence 133 consisting of PT454 PT425 PT455. In addition, at least two subsequences of Sequence 84 appear in AII/S/W: Subsequence 126 consisting of PT433-434 and Subsequence 134 consisting of PT455 PT452-453.

[42] Subsequence 128 consisting of PT447-448 PT450-451; Subsequence 121 consisting of PT367-368; and Subsequence 135 consisting of PT589-590 PT426-434 PT443-444 PT454 PT425 PT455 PT452-453.

[43] With Subsequence 121 consisting of PT367-368 on Ibi/Frag. W.

tombs and coffins,[44] and beyond.[45] Thus identically ordered segments of Sequence 84 enjoy a considerable frequency of attestation outside the bounds of Pepi II and Neith. Moreover, the segments maintain a spatial affinity for each other; in Pepi I, for instance, the segments are found mixed in with several other sequences, subsequences, and non-recurring series,[46] and yet they still occur on the same wall surface; the positioning of segments of Sequence 84 in close proximity to other segments shows that they belong together.

A further detail from the same wall surface in Pepi I reveals an important detail concerning the affinity of texts that are found grouped together. Among the other sets of texts on that west wall are two recurring series consisting entirely of texts found in Sequence 84—but they occur in these series in *different* order and are shorter in length.[47] Such re-arrangements of *different* order reach forward to the pyramids of Merenre (again sarcophagus chamber, west wall) and Ibi (on the same fragment as before)[48] and into the

---

[44] Subsequence 129 consisting of PT447-448 on Sq10C/L; Subsequence 130 consisting of PT448 PT450-451 on T1C/S/S; Subsequence 131 consisting of PT451 PT367 on L-MH1A/L; Subsequence 121 consisting of PT367-368 on L3Li/B; Subsequence 123 consisting of PT428-430 on Sq7C/xFR-xB; Subsequence 125 consisting of PT431-434 on M1War/B; Subsequence 126 consisting of PT433-434 on S1C/xB; Subsequence 127 consisting of PT443-444 on S1C/xH-xF;

[45] Subsequence 124 consisting of PT430-432 on C 41071/L.

[46] Marked in bold, the subsequences of Sequence 84 appear within the context of the following sets of texts on P/S/W, in this order: Sequence 81 consisting of PT422 PT365 (occuring also at N/S/W); Sequence 71 consisting of PT365-366 (occurring also at T/A/W and M/S/W); and Sequence 82 consisting of PT423 PT371-372 PT424 (occurring also at Nt/S/W-S); followed by a non-recurring series consisting of PT370 PT425, and then **Subsequence 121 and 122**, followed by a long, non-recurring series beginning with PT435 and ending with PT442, and then **Subsequence 127**, followed by PT445. After these, there is Sequence 85 consisting of PT446 PT428 PT447-448 (occurring also on Sq5Sq/L); Subsequence 146 consisting of PT448-449; and Sequence 88 consisting of PT450-453 (occurring also on T1C/S/S); followed by **Subsequence 132 and 133**.

[47] With Sequence 85 consisting of PT446 PT428 PT447-448 on P/S/W (occurring also on Sq5Sq/L); and Sequence 88 consisting of PT450-453 on P/S/W (occurring also on T1C/S/S).

[48] With Sequence 87 consisting of PT450-451 PT589-590 PT426-431 on M/S/W and Ibi/Frag. W.

Middle Kingdom.[49] Thus, as the component texts of the sequence do *not* always appear together in the same order, it is clear that the sequential relationship between the texts is not inviolable.

In their atomization, mixing, and rearrangement is glimpsed the complexity of the distribution of Sequence 84's component texts: the series is not a self-contained and independent composition with a fixed beginning, middle, and end; rather, it is a grouping of texts drawn together at the end of the Old Kingdom from smaller units formerly found dispersed, sometimes with differing order, and afterwards split apart and rearranged to construct new series of texts. The fluid configuration of the sequence's shorter segments suggests that the intelligibility of Sequence 84's components is not strictly dependent upon a fixed number of texts in a certain order. Moreover, their susceptibility to recombination with other series of texts provides a glimpse of their interrelation with other portions of the corpus.

1. Recurring Series with Matching Characteristics

There are dozens of recurring series composed of texts not found in Sequence 84 but nevertheless possessing the attributes that characterize it. Importantly, these related series reach back to the earliest pyramid with texts, that of Wenis. To speak of its series related to Sequence 84 and of the others first attested in the Old Kingdom, the majority occur in the sarcophagus chamber, with a few more in addition to Sequence 84 appearing

---

[49] With Sequence 73 consisting of PT367 PT356 on T1C/S/S and L-MH1A/L; Sequence 85 on Sq5Sq/L, mentioned above as occurring on P/S/W; Subsequence 136 consisting of PT446 PT428 PT447 on Sq4Sq/L; Sequence 86 consisting of PT448 PT451 on L3Li/B and Sq10C/BO; Subsequence 137 consisting of PT451 PT589 on Sq10C/BO; Sequence 88 on T1C/S/S, mentioned above as occurring on P/S/W; Sequence 89 consisting of PT451-453 PT367 on L3Li/B and T1C/S/S; and Subsequence 145 consisting of PT428 PT447-448 PT450-451 on Sq5Sq/L.

on the west wall,[50] some opposite it on the east wall,[51] a few on the north (alongside offering ritual texts),[52] and many on the south.[53]

That the walls of the sarcophagus chamber were not absolutely restricted in respect to what sort of text might occur on them is evidenced, first of all, by the fact that all of these sequences bear relations to one another beginning with their intertextual connections to Sequence 84, and second by the fact that still other recurring series could

---

[50] Sequence 81 consisting of PT422 PT365 on P/S/W and N/S/W; Subsequence 192 consisting of PT365 PT373 on N/S/W and AII/S/W; Subsequence 197 consisting of PT370-371 on N/S/W. In addition, there are two recurring series containing components of Sequence 84 along with texts related to it by content: Sequence 83 consisting of PT443-445 on P/S/W and AII/S/W; Subsequence 150 consisting of PT588 PT446 on Nt/S/W and Sq5Sq/L.

[51] Sequence 116 consisting of PT596 PT355 on N/S/E and M/S/E; Sequence 117 consisting of PT600-601 on N/S/E and M/S/E; Sequence 126 consisting of PT659 PT604 on P/S/E and N/S/E; Subsequence 165 consisting of fPT665A-C fPT666 fPT759 fPT666A-B fPT667 fPT667A-C on Nt/S/E. In addition, there are two recurring series containing components of Sequence 84 along with texts related to it by content: Subsequence 190 consisting of PT356-357 on P/S/E, T/S/E, and Sq5Sq/BO; Subsequence 205 consisting of PT593 PT356-357 on M/S/E.

XVI-XX, and C 41002/int. side walls; Subsequence 168 consisting of PT675-676 on Ibi/FragCc i; Subsequence 191 consisting of PT364 PT677 on Ap/Frag 8+24 and Mutirdis/S/E. In addition, there is a recurring series containing one component from Sequence 84 along with a text related to it by content: Subsequence 194 consisting of PT366-367 on Oudj/Fr. Sec. 1, and TT 353 (Tm)/A (ceiling).

their respective sarcophagus chambers,[62] while none of these series appears in a descending passage or corridor leading down into a pyramid's subterranean chambers. Altogether, the eighty-three related series distributed across these surfaces contain eighty-three texts.[63]

A concrete example will illustrate Sequence 84's connections with other recurring series. Appearing on the west wall of the antechamber of the pyramid of Teti and on the west wall of Ankhesenpepi II's sarcophagus chamber is Subsequence 196, consisting of PT 370-372. Although none of these three texts appears in Sequence 84,[64] they possess multiple points of textual contact with it, beginning with expressions already found to be characteristic of the latter. The center text of the subsequence is as follows:

PT 371 Pyr 648-650 (T)

650c *ḫnt ib n*(*i*) *ḥr ḫr=k m rn=k n*(*i*) *ḫnt*(*i*)*-imn.tiw*

648a Recitation.
648a O Osiris Teti, Horus has placed you in the *ḥꜣ.ti*-heart of the gods:
648b he has caused that you seize the *ṯwi.t*-white crown, the Lady:
648c Horus has found you,
648c (it) being *ꜣḫ* for him with you.
648d Go forth against your enemy,
648d for you are one greater than him.
649a Horus has caused that he lift you, in your name of 'great lifted one':
649b he has saved you from the hand of your enemy:
649c he has saved you as one who is to be saved in his time.
649d Geb has seen your form:
649d he has set you in your place.
650a Horus has stretched your enemy under you for you,
650a being older than him:
650a you came forth before him.
650b You are the father of Horus, the one who begot him (Horus), in your name of 'begetter';
650c Horus is happy with you, in your name of 'Foremost of the Westerners.'

Altogether, PT 371 has four points of contact with the texts of Sequence 84: ministrating to the deceased is Horus, to whom is again applied the phraseology *ꜣḫ n si* "it is *ꜣḫ* for", and who saves the beneficiary (*nḏ ḥrw*) and puts his enemies under him (*pḏ ḫr*); and the beneficiary's identity is expressed through the name formula "in your/his name of" (*m rn=k/rn=f*).

PT 371 is not alone in its relationship, since its two fellows in Subsequence 196 have their own connections with Sequence 84: the deceased is joined together (*dmḏ*) by male divinities;[65] Horus puts the beneficiary's enemies under him (*dw ḫr*);[66] that god is

[65] PT 370 Pyr 645a (M): *rḏi.n ḥr dmḏ ṯw nṯr.w* "Horus has caused that the gods join you".

[66] PT 372 Pyr 651c (T): *d.n=f kw ḥr sꜣ=f* "he has put you upon his (*sc.* your enemy's) back"; and see Pyr 651d (T): *ir s.t=k ḥr=f* "make your place upon him (*sc.* your enemy)"; and Pyr 652a (T): *pr* "ascend (*sc.* onto him, your opponent)".

the Ka of the beneficiary (*kꜣ ḥrw*);[67] the beneficiary's identity is expressed through the name formula "in your/his name of" (*m rn=k/rn=f*);[68] and a divinity is said not to separated (*wpi*) from him, i.e. not to be distant.[69] As Subsequence 196 possesses expressions found to be characteristic of the components of Sequence 84, it is clear that these expressions transcend the bounds of the latter.

But the two series show further relations beyond expressions found repeated in Sequence 84. In both, the beneficiary is exhorted to awaken (*i.rs*),[70] he is satisfied (*ḥtp*) with ritual performed for him,[71] and, as a counterpart to others not being distant from him, the beneficiary is himself not to be distant from divine beings (*imi ḥr ir*).[72] Sequence 84's three additional points of contact with Subsequence 196 help show how its components participate in a broader semantic field.

Indeed, as exemplified by its relations with Subsequence 196, Sequence 84 is linked by a veritable network to the eighty-three recurring series mentioned above,[73] beginning with their possession of its characteristic motifs. In these other series as well, there are above all exhortations to the beneficiary that he arise (*ḥ*),[74] with this exceptionally well attested resurrection formula complementing motifs having to do with the reconstitution of the corpse, including exhortations that he receive his head (*šzp tp*),[75]

On the Haunebu, see Bontty 1995, pp. 45-58.

have power over the gods (*sḫm m nṯr.w*).[119] As a result, the beneficiary does not go dead, but goes alive (*šm ꜥnḫ n šm mwt*)[120]—which is to say that he does not truly die.[121]

In sum, Sequence 84 is related to dozens of other recurring series through a network of textual points of contact: first, by expressions found to be characteristic of its own components; and second, by expressions found only once in it but again in the other series. Together, the broad distribution of these motifs helps show how Sequence 84 participates in a wider semantic field. By virtue of the characteristics held in common among these texts, one may regard them as members of a type. Because membership in the type and its characteristics were identified while being guided by ancient groupings, some degree of faithfulness to the ancient typological sensibility may be assumed to have been maintained.

The second step taken above was intended to show Sequence 84's connections to these other series beyond the motifs found repeated in it. But, after granting that the component texts of these series represent members of a type, a concomitant result of the procedure is the augmentation of our knowledge of the type's inventory of characteristics.[122] That knowledge may be further expanded, since, besides possessing

---

[119] In Sequence 84 at PT 426 Pyr 776b (P): *n sḫm=k m nṯr.w kȝ.w=sn ist* "precisely because you have power over the gods and their Kas". In the recurring series related to it at PT 364 Pyr 620a (T) (Sequence 92; Subsequence 191): *sḫm=k im=sn* "you having power over them"; PT 649 Pyr 1830b (N) (Sequences 124-125): *sḫm=k im=*[*sn*] "that you may have power over [them]".

[120] In Sequence 84 at PT 450 Pyr 833a (P): *šm n=k ꜥnḫ=k n šm.n=k is m*(*w*)*t=k* "go alive! You cannot go dead!" In recurring series related to it at PT 213 Pyr 134a (W) (Sequence 112; Subsequences 71, 153-154, 156): *n šm.n=k is m*(*w*)*t.ti šm n=k ꜥnḫ.*[*t*(*i*)] "you cannot go dead; go alive".

[121] See Zandee 1960, pp. 54-55, for *šm* "to go" as a synonym for *mwt* "to die".

[122] In fact, this is merely a quasi-tautological rephrasing of the argument, but expressed from the point of view of its conclusion: because the texts are related by shared expressions, they are said to be of a certain type; thus the characteristics of the type—the criteria of assignment to it—are these same expressions.

points of contact with Sequence 84, the recurring series related to it share motifs among themselves. In other words, they are related to one another just as they are related to Sequence 84, with some of their connections not held in common with the latter.

To rigorously support the preceding paragraph, to further materialize the ties between the component texts of the other series, and to expand our knowledge of the attributes of the type of text under consideration, these other motifs will now be identified. They further develop the themes of the beneficiary's resurrection and the restructuring of the corpse, along with other actions of gods and priests for him, and the deceased's identity, actions, and condition.

To begin, the beneficiary is exhorted to resurrect himself by commands that he awaken and turn about (*wḥ, inn*)[123] and, in parallel to commands that he raise himself (*ṯzi ṯw/ṯni kw*), others are said to raise him (*ṯzi/ṯni*).[124] Indications of the reconstitution of the corpse are present in the beneficiary's taking or being presented with his own or Osiris's efflux (*rḏw*).[125] His reconstitution can be performed by *himself*, through his collecting his

[185] PT 223 Pyr 216a (W) (Subsequences 63-64): *siꜥ kw n*(*=i*) "make yourself rise up to me (*sc.* priest as Horus)" (see Edel 1955/1964, §871, concerning the position of the pronominal dative); PT 357 Pyr 586a (T) (Sequences 68, 114, 190, 205): *siꜥ kw n ḥr* "make yourself rise up to Horus (*sc.* the priest)"; PT 370 Pyr 645c (M) (Subsequences 196-197): *siꜥ kw n ḥr* "make yourself rise up to Horus (*sc.* the priest)".

ascend (*pri*),[186] rise (*šwi*),[187] and go up as the eye of the sun god (*pri m ỉr.t rˁ*),[188] (and it should be stressed that, since they are imperatives and jussives, these few motifs are all addressed directly to the deceased, rather than situating him in the first or third person, in contrast to similar but much more plentifully attested motifs to be encountered in Chapter Five). A final indication of the upward motion of the beneficiary is implicit in exhortations that he grasp, receive, or take the hand (*nḏri/šzp/iṯi*) in respect to the imperishable stars (*i.ḫm.w-sk*).[189]

---

[186] PT 218 Pyr 162b (W) (Sequence 112; Subsequences 153-159): *pr* "ascend"; PT 222 Pyr 208a (W) (Sequence 112; Subsequences 79, 153-154): *pr=k* "may you ascend"; Pyr 209a, 210a (W): *pr=k hꜣ=k* "may you ascend and descend"; PT 412 Pyr 733c (T) (Subsequence 200): *pr=k n rˁ* "ascend to Re"; PT 537 Pyr 1301a (P) (Sequence 127; Subsequence 164): *pr=k m ḥr dꜣ.t*(*i*) *ḫnti i.ḫm.w-sk* "may you ascend as Netherworld Horus, the one before the imperishable stars"; fPT 667 Pyr 1935a (Nt) (Sequence 127; Subsequences 164-165): *pr=k* "may you ascend"; fPT 667B Pyr 1950c (Nt) (Sequence 127; Subsequences 164-165): *pr=k r=k* "may you ascend"; PT 690 Pyr 2099b (N) (Sequences 129, 134): *pr=k m ỉwnw* "may you ascend from Heliopolis". Contrast the motif where the beneficiary is said to ascend to the sky (*pri r p.t*), as this does not occur in the second person; see below at n. 53.

[187] PT 612 Pyr 1734a-b (M) (Sequence 119; Subsequence 162): *šw ỉr=k r ỉr*(*.t*) *rˁ ỉ*(*r*) *rn=k pw ỉr.n nṯr.w* | *n*(*ỉ*) *ḥr dꜣ*[*.ti n*(*ỉ*) *ḥr sk sn*] "rise to the Eye of Re, to this your name which the gods made, of 'Netherworld Horus,' [of 'Horus who destroys them']"; fPT 666 Pyr 1925a (Nt) (Sequence 127; Subsequences 164-165): *šw r=k ỉr p.t m-ˁb sbꜣ.w ỉmỉw p.t* "rise to the sky in the company of the stars who are in the sky"; fPT 717 Pyr 2231a-b (N) (Sequence 133; Subsequence 170): *šw {r=k} ỉr=k ỉr p.t m-ˁb nṯr.w n rn=k <p>w /// | /// sk sn {z}<ˁ>bš sn* "rise to the sky among the gods, because of <th>is your name [of] /// ['Horus] who destroys them,' 'who drowns them'".

[188] fPT 666 Pyr 1919b (Nt) (Sequence 127; Subsequences 164-165): *pr=k ỉm <m> ỉr*(*.t*) *rˁ ỉs* "and ascend thereby <as> the Eye of Re"; fPT 717 Pyr 2225c (N) (Sequence 133; Subsequence 170): *pr=k ỉm=sn m ỉr.t rˁ* "ascend by them as the Eye of Re".

[189] PT 412 Pyr 724d (T) (Subsequence 200): *nḏr=k ỉr ˁ i.ḫm.w-sk* "may you take the hand of the Imperishable Stars"; PT 611 Pyr 1726c (M) (Sequence 119; Subsequence 162): *šzp=k ˁ n*(*ỉ*) *i.ḫm.w-sk* "and receive the hand of the Imperishable Stars"; fPT 665 Pyr 1900c (Nt) (Sequence 127): *iṯ=k ˁ=k ỉr i.ḫm.w-sk* "and you take your hand away to the Imperishable Stars"; fPT 665C Pyr 1915c (Nt) (Sequence 127; Subsequences 164-165): *šzp=k ˁ i.ḫm.w-sk* "and receive the hand of the Imperishable Stars"; bPT 716B Pyr 2223d (N) (Sequence 133; Subsequence 170): *nḏr=k ˁ n i.ḫm.w-sk* "and take the hand to the Imperishable Stars".

The dangers of his travels are expressed in exhortations that he beware (*z3i*) a person or place[190] or a body of water (*z3 š*).[191] But he receives protection (*ḫw.t*) through entering (*ʿq*) into it,[192] or as Horus he has the protection of his eye (*z3 ỉr.t*).[193]

Reflections of the beneficiary's exalted position are found in motifs where he is pure in the horizon (*wʿb m 3ḫ.t*)[194] and is more powerful than (*sḫm ỉr*) a god or gods.[195]

---

[190] PT 224 Pyr 221b-c (T) (Subsequences 63-64): *z3 tw | dr=k pw ỉm(i) t3* "beware this end of yours which is in the earth"; fPT 665 Pyr 1905c-1906a (Nt) (Sequence 127): *mdw n=k nn | z3.t(i)wny 3s.t ỉs* "let this one say to you, 'beware (you two),' as Isis"; fPT 666B Pyr 1930e-1931a (Nt) (Sequence 127; Subsequences 164-165): *z3 tw rmṯ.w ỉptf n(i)t pr b3 ḥr.t d3.t | m rn=sn pw n(i) d3.t(i)wt* "beware the people, those of the house of Ba, terrible and transgressing, in this their name of 'transgressors'". In this context, one may consider the command to the beneficiary in the offering ritual text PT 68 Pyr 47d (Nt): *z3 ỉm(i)=k sfḫḫ.w ỉm=f* "beware! May you not let go of it!"

[191] PT 214 Pyr 136a (W) (Sequence 112; Subsequences 71, 153-154, 156): *z3=k š* "may you beware the lake"; PT 466 Pyr 885 (P) (Sequence 92): *z3 tw š wr* "and beware the Great Lake".

[192] PT 611 Pyr 1727b (M) (Sequence 119; Subsequence 162): *ỉ.ʿq r=k ỉr pr ḫw.t* "enter into the house of protection"; fPT 666 Pyr 1922a (Nt) (Sequence 127; Subsequences 164-165): *ʿq.t(i) m <pr> ḫw.t* "being entered into <the house of> protection"; fPT 717 Pyr 2229a (N) (Sequence 133; Subsequence 170): *ʿq.t(i) m pr ḫw.t* "being entered into the house of protection".

[193] PT 220 Pyr 195d (W) (Sequence 112; Subsequences 153-154, 156): *ḥr pw šn m z3 ỉr.t=f* "he is Horus, encircled by the protection of his Eye"; PT 221 Pyr 198d (W) (Sequence 112; Subsequences 79, 153-154): *n twt ỉs ḥr šn m z3 ỉr.t=f* "for you are Horus, encircled in the protection of his Eye".

[194] PT 216 Pyr 151a (similarly 151b, 151c) (W) (Sequence 112; Subsequences 71, 153-154, 156): *wʿb ʿnḫ m 3ḫ.t* "let the Living One be pure in the horizon"; PT 222 Pyr 208c (W) (Sequence 112; Subsequences 79, 153-154): *wʿb=k m 3ḫ.t* "you being pure in the horizon".

[195] PT 215 Pyr 144a (similarly 144b) (W) (Sequence 112; Subsequences 71, 153-154, 156): *sḫm.n=k ỉr=f* "having become more powerful than him"; PT 222 Pyr 204c (similarly 206c) (W) (Sequence 112; Subsequences 79, 153-154): *m(i) tw ỉr=k b3.tỉ sḫm.tỉ r nṯr.w šmʿ 3ḫ.w=sn ỉsṯ* "you are a Ba, more powerful than the gods of Upper Egypt, and their *3ḫ*s".

Finally, the deceased interacts with the world of the living through being assured that his son is upon his throne (*zꜣ ḥr ns.t*),[196] and, besides the beneficiary and at turns various gods mentioned above, the crowns can be addressed.[197]

To summarize the present chapter up to this point, it was first of all found that most of the component texts of Sequence 84 shared content with the others of that series, with that content being characteristic of the series by virtue of their repetition within it. Examination of other recurring series showed that they also possessed these characteristics and shared still other expressions with Sequence 84. From that, and from still more motifs shared among the texts of the related series, the texts may be understood as members of a type.

Because the membership of the type and its characteristics were identified from the starting point of ancient groupings, it may be assumed that some degree of faithfulness to the ancient classificatory sensibility has been maintained. And a mark of that is in the homogeneous character of the texts gathered together in this type: of the eighty-three texts from the recurring series related to Sequence 84,[198] there are only four for which were noted no distinctive intertextual connections with the others.[199]

---

[196] PT 225 Pyr 223a (N) (Subsequence 63): *zꜣ=k ḥr ns.t=k* "that your son be upon your throne"; PT 422 Pyr 760a (P) (Sequence 81): *ꜥḥꜥ zꜣ=k ḥr ns.t=k ꜥpr m ir.w=k* "may your son arise upon your throne, equipped in your form (*sc.* of Horus)"; PT 557 Pyr 1388a (P) (Sequence 102): *iwꜥ.w=k ḥr ns.t=k* "with your heir upon your throne".

[197] PT 220 Pyr 194b (similarly 194c, 195d, 195e) (W) (Sequence 112; Subsequences 153-154, 156): *iw.n=f ḫr=ṯ n.t iw.n=f ḫr=ṯ nzr.t* "to you has he come, O Red Crown; to you has he come, O Fiery One"; PT 221 Pyr 196a-b (W) (Sequence 112; Subsequences 79, 153-154): *ḥi n.t ḥi ini ḥi wr.t | ḥi wr.t-ḥkꜣ.w ḥi nzr.t* "hail, Red Crown! Hail, Ini-crown! Hail, Great Crown! Hail, Great of Magic! Hail, Fiery One!"; Pyr 198a (W): *ḥi ini* "hail, Ini-crown".

[198] For their listing, see above n. 63.

[199] Specifically PT 464, bPT 1013, and the fragmentary PT 663 and bPT 1007.

Meanwhile, concerning the two texts of Sequence 84 that were not found to possess such connections with their fellows of that series, only one remains without an immediate link to the others.[200] In short, the assemblage of motifs collected above may be regarded as textual characteristics of a type.

However, among the type's characteristics is its performance structure. Of the eighty-three texts in the recurring series related to Sequence 84, fifty-four of them exclusively address the beneficiary in the second person,[201] ten only speak of him in the third,[202] and nineteen switch between the second and third.[203] Meanwhile, there are none that show an original first person pronoun or a true[204] sign of editing away from the first. As there is no evidence that any of them were originally in the first person, the component texts of the series related to Sequence 84 may be understood as possessing the sacerdotal performance structure.

2. Further Texts with Matching Characteristics

Because not all Pyramid Texts are attested as components of a recurring series, while the examination thus far has been restricted to the same, it may be supposed that there are other members of the type as yet unidentified. That this is so may be seen

Finally, he interacts with the world of the living in making his gate flourish (*srwḏ ꜥrr.wt*),[281] with mourning ceasing (*tm/nḥm i3kb*).[282]

Having reviewed the connections between these seventy-odd texts and the others of the type, their performance structure may be considered. Thirty-six only address the beneficiary in the second person,[283] fourteen only speak of him in the third,[284] and twenty-two situate him in both, switching between the two persons.[285] Meanwhile, none shows any sign of editing away from the first, nor do any show a maintained first person. As with Sequence 84 and the recurring series related to it, they may all be interpreted as possessing the sacerdotal performance structure.

3. Conclusions Concerning the Type

It was shown that the overwhelming majority of the component texts of Sequence 84 possess intertextual connections with other texts in that series, which at this point should seem hardly surprising. More important is the fact that these motifs are shared with the texts of other recurring series. Still more connections were drawn out among the sum total texts of these series, with virtually none of their component texts lacking an

intertextual connection with the others. Their mutual ownership of a set of motifs, together with shared performance structure, led to the texts being accepted as members of a type. The overarching significance of this procedure is to have identified the characteristics distinctive of a type anciently regarded as such, as evidenced by these texts being grouped together.

The texts of this type above all deal with the beneficiary's self-resurrection and the reconstitution of his corpse on the part of gods and himself. They also are replete with mention of the specific actions and attributes by an array of gods for him: Nut and Geb act to protect and exalt him, these two gods being puissant and possessing royal traits; Horus operates as savior, as subjugator of the beneficiary's foes, and, with his children, as his supporter or bearer; Seth is seen to be one who acts against the beneficiary, and as such is to be brought under his control; the creator god Atum encloses the beneficiary and merges with him, with the two rising together as the sun; the beneficiary's sisters Isis and Nephthys greet him, find him, and love him; and Anubis, the god of embalming, attends to him and acts for him. A ritual context is prominent, with narrative allusions made to the performance of dance and calendrical ceremonies, and to the deceased's positioning at the offering place. The texts also deal with other actions of the beneficiary besides his self-resurrection and self-reconstitution, in particular his rejection of the buried state and exhortations to him that he go up. His condition is such that he is equipped with protection, devoid of fault, and is in a state of purity. Furthermore, he is identified as a divine jackal and Horus, and he is given various other identies—celestial, chthonic, and divine. Last, he is incorporated among the gods, and they are satisfied with him. The motifs constitutive of these themes are not found dispersed indiscriminately throughout

the Pyramid Texts but rather are concentrated in these texts.[286] In other words, it is exceptionally rare that these motifs appear in texts of other types; they are distinctive to this one.

While offering ritual texts were termed as such by virtue of their being dominated by motifs involving imperatives to the beneficiary that he take the Eye of Horus, with the Eye typically symbolized in items ubiquitously specified, the texts of the present type are dominated by imperatives to the deceased that he arise (*ḥ*ʿ),[287] awaken (*rs*),[288] and raise himself (*ṯzi ṯw*).[289] Indeed, the number of such statements is so great that Mathieu holds that these three appeals serve to mark an entire genre—except that he cites only a fraction of the total number of texts with these motifs,[290] and, as observed above,[291] not all members of an ancient type possess all of its characteristics. Consequently, to suppose that merely these three motifs also serve to define a type would fail to account for the clear associations among all the texts of Sequence 84 or any other recurring series discussed in this chapter, because not every component has them. Nevertheless, Mathieu's statement certainly does justice to the prominence of these particular motifs.

[289] See above nn. 96 and 206.

[290] Mathieu 2004, p. 255, citing only PT 365, 366, 437, 451, 460, 497, fPT 603, 604, bPT 665A, bPT 665B, bPT 667B, bPT 667D, 675, fPT 723, bPT 1009, holding that a second critical feature is their incipit position. As shown in this chapter, the motifs do not occur merely at the beginning of texts.

[291] See above at nn. 109-110.

As their significance is literally resurrection, they happily dovetail with a group of twelve texts termed the "resurrection ritual" by J. P. Allen, based on the correspondences between two series of texts recurring between Wenis and Senwosretankh.[292] As with Mathieu's assertion, Allen's label is provocative, since all twelve were identified as members of this chapter's type by a different procedure. Interestingly, Mathieu supposed the existence of a set of texts based on a limited number of motifs, and Allen supposed the existence of a set based on two short sequences; neither of them dealt with the same texts, but both sets are to involve resurrection. One could do worse than to extend this prominent significance to the texts identified in this chapter.

C. RESURRECTION TEXTS

1. RELATIONS WITH OFFERING RITUAL TEXTS

On the basis of their close association with offering lists, it was suggested in the preceding chapter that mortuary service was the original cultural setting of offering ritual texts, prior to their being inscribed in tombs. In view of that association, statements made by an officiant referring to himself in the first person fleshed out our picture of the rites, not only in vividly revealing the actions of the officiants as they manipulated the items regularly specified in such texts, but also in underscoring the texts' sacerdotal structure in respect to their verbal performance.

As has been seen, resurrection texts share that sacerdotal structure: their performance is dependent upon someone other than the beneficiary. And as that beneficiary is deceased, their performance naturally falls into the milieu of mortuary service, like offering ritual texts. Indeed, in resurrection texts the reciter sometimes

---

[292] PT 213-222 and 245-246; see J. P. Allen 1994, pp. 9-12 (Sequences D and E) and 15-17; and J. P. Allen 1988, pp. 38-39.

makes reference to himself in the first person,[293] and, as with offering ritual texts, the content of these particular statements is useful in clarifying the setting of the texts' performance—but with a difference. While several give clear indications of an offering ritual topos by allusions to the presentation of the Eye of Horus[294] and to giving bread—as with *ꜥḥꜥ ḥr gs=k i3b.i d ṯw ḥr gs=k wnm.i | šzp n=k t=k pn rḏi.n(=i) n=k ink z3=k iwꜥ=k* "arise from upon your left side; set yourself upon your right side! This is this Rentjen, the presentation. Let me present you with this your bread, just as Horus presents him with his Eye. This is this Rentjen, your Wag-offering".

[296] With the single possible exception of PT 436 Pyr 788a (M): *rḏi.t qbḥ* "giving libation", understood by Grimm 1986, p. 105 with n. 48, to be an instruction for the performance of a ritual action, but as a title by Faulkner 1998, p. 143. The first option is probably correct, since the noun phrase precedes the recitation mark.

absence of such instructions, the texts of the present type may be understood as purely oral.[297]

The difference in manner of performance may be illuminated through consideration of two resurrection texts, PT 357 and 364. The first of them consists of three addresses to the deceased, each initiated by the vocative *hꜣ*, and in one of these addresses a series of intriguing statements are made:

PT 357 Pyr 590-592 (T)

590a *hꜣ wsir T. pw*
590a *m gꜣ.w*
590a *m ʿš.w*

[297] In that respect, a text of the present type may be correctly called "ein Sprechritus (rite oral), der nicht kultische Handlungen begleitet, sondern selbst eine kultische Handlung darstellt und in der Rezitation vollzieht", to apply a description given by Assmann 1986, col. 1002, to sets of texts called by him "mortuary liturgies" (Assmann 1990), "Totenliturgien" (Assmann 2002, Assmann 2001b), and "Verklärungsliturgien" (Assmann 1986). (See also the less careful formulation of Assmann 1990, p. 21: "Liturgies consist of recitations and perhaps accompanying performances, while rituals consist of performances with concomitant recitations".) Based on the further qualification to this description in a note by Assmann 1986, col. 1006 n. 58, "Die ihrerseits von nicht-sprachlichen Handlungen (bes. Räucherungen und Libationen) begleitet sein können", Willems 2001, p. 356, challenged the description's utility, seeing "little point in differentiating ritual acts accompanied by recitations from recitations accompanied by cultic acts". Phrased in that fashion, one can only agree. And, perhaps for its weakness, Assmann 2002 and Assmann 2000 refrain from similar formulations. In the context of the resurrection texts of the present work, there is fortunately no need for such a qualification. However, with Assmann 1986 and Assmann 1990, such a qualification was necessary since the intent was not to describe individual texts belonging to a type but to describe the overall character of longer series of texts, with some of these series being heterogeneous in composition. Thus, while most component texts of mortuary liturgies are indeed purely recitational, some liturgies also contain texts that involve the physical manipulation of items—above offering ritual texts drawn from the Pyramid Texts. Notable are PT 94-95 appearing within Assmann's "Liturgie CT.4" (see Assmann 2002, pp. 490-491), maintaining their item specifications even within their mortuary liturgy context in TT 353. A further heterogeneous mortuary liturgy identified by him likewise includes some offering ritual texts, namely Assmann's "Liturgie NR.3" (see Assmann 2002, p. 19), from the unpublished Pap. BM 10819 (concerning which, see Quirke 1993, pp. 17, 51, and 80; Dorman 1988, p. 83 with n. 73; Assmann 1984, pp. 284-285; Assmann 1986, col. 999; Assmann 1990, pp. 26-27; and Assmann 2000, pp. 92 and 98-101): PT 25, parallel to vo. 115-119 (BM Photo 197550), the parallel noted by Assmann 1990, p. 44; PT 32 (with extensive additions), parallel to ro. II 20-23 (BM Photo 197545), the parallel noted by Assmann 1990, p. 44; compare also ro. II 8-11 (BM Photo 197546), which gives PT 32 with only minor differences; PT 94-95, parallel to vo. 44-47 (BM Photo 197541); and PT 196, parallel to vo. 48-49 (BM Photo 197541). In summary, while the description of Assmann 1986, col. 1002, is not uniformly suited to the description of all members of mortuary liturgies, it is fortuitously apt as a description of this chapter's resurrection texts.

590a O Osiris Teti,
590a do not lack;
590a do not cry out.
590b Geb has brought Horus to you,
590b that he reckon their (*sc.* the gods') hearts to you:
590c he having fetched all the gods to you at once
590c with none of them having escaped from him.
591a Horus has saved you, once and for all:[298]
591b Horus has wrested his Eye from Seth:
591b he has given it to you.
591c As for this his sweet eye, make it return to you;
591c reckon it to yourself!
591c Ah, oh, (it) is *given to you!
592a Isis has joined you,
592b even with Horus happy with you, in your name of 'Foremost of the Westerners'.
592c It is Horus who will redeem what Seth did against you.

This passage is rich in expressions characteristic of resurrection texts: the beneficiary does not lack (*imi gȝi*); Geb brings Horus (*ini gbb ḥrw*); Horus twice saves the deceased (*nḏ ḥrw*), a goddess draws him together (*iᶜb ȝs.t*), he is identified with the "in your name of" formula (*m rn=k ni*), and Seth's adversarial action is mentioned (*iri stš ir*). And yet there is an instance of a motif regarded as characteristic of offering ritual

[298] Lit. "that he saves you does not *repeat".

texts—making the Eye of Horus return (*sḫt ỉr.t ḥrw*). In fact, it is the sole instance of this particular motif falling outside of an offering ritual text, and it appears here for good reason: it falls within an extensive quotation of the recitations of three texts of another type entirely: from "as for this his sweet eye" to "ah, oh, (it) is *given to you", PT 357 is citing statements made in the offering ritual texts PT 194-196:

112 Ah, oh, (it) is *given to you!
112 [Two] Henket-items.

As may readily be seen, PT 357's citations of these texts are virtually verbatim, with the only difference being replacement of *ỉr*(*.t*) *ḥr tn* at Pyr 111a with *ỉr.t=f ỉtn* in the corresponding passage of Pyr 591c—a very minor difference indeed. The citations are all the more striking since PT 194-196 consistently appear together in that order, as in Sequence 26 and Subsequence 62,[299] recurring series homogeneously consisting of offering ritual texts. In directly drawing from a set of texts inextricably bound to the offering ritual, PT 357 connotes[300] their context.

More will be said on the nature of these citations in a moment, including their obvious differences, but first a similar situation may be observed as with PT 364. Consisting of five addresses to the deceased, similarly initiated by vocatives with the particle *ḥ3*, the longest of them contains the citations in question:

612a O Osiris Teti,
...
613c Horus has bound himself to you,
613c him not separating from you:
614a Horus has made you live, in this your name of 'Andjeti.'
614b Horus has [given] you his enduring Eye:
614c he has given it to you that you be strong,
614c that every opponent of yours be terrified of you:
614d <Horus> has filled you completely with his Eye, in its name of 'god's offering'.
615a Horus has gathered the gods for you,
615b they not being distant from you, at the place where you went:
615c Horus has gathered the gods for you,
615d they not being distant from you, at the place where you drowned.
616a-b Nephthys has drawn together all your limbs for you, in this her name of 'Seshat, Lady of Building:'
616c she has made them well for you,
616d you being given to your mother Nut, in her name of 'sarcophagus':
616e she has drawn you together, in her name of 'coffin'.

The excerpt is rich in expressions characteristic of resurrection texts: gods are thrice said not to be apart from the deceased (*n wpi/bi3i ir*), he is identified with the "in your name of" formula (*m rn=k ni*), Horus twice gathers gods (*ip/ḫmꜥ ḥrw nṯr.w*) for him, and he is drawn (*inq*) together by the goddesses Neith and Nut. But again there are exceptional instances of motifs from offering ritual texts, and again they occur within the citations, this time from PT 197-198:

PT 197 Pyr 113 (N)

113a *ḏd-mdw*
113a *wsir Ne.*
113a *ir(.t) ḥr tn rwḏ.t d(=i) n=k s(i)*
113a *imim=k*
113b *nr n=k ḫft(i)=k*
113b *t dw3 m-ḏr=f*

113a Recitation.
113a O Osiris Neferkare,
113a as for the enduring Eye of Horus, let me give it to you that you be strong,
113b that your opponent be terrified of you.
113b Morning bread beside him.

PT 198 Pyr 114 (N)

114 *ḏd-mdw*
114 *wsir Ne.*
114 *mḥ.n kw ḥr tm.ti m ir.t=f m-tp w3ḥ.t*

114 Recitation.
114 O Osiris Neferkare,
114 upon the oblation has Horus filled you completely with his Eye.

While their origin is unmistakable, PT 364 makes considerable modification to its citations from these offering ritual texts. Indeed, it was on the basis of such changes as that between "as for the enduring Eye of Horus, let me give it to you" in PT 197 and "Horus has [given] you his enduring Eye" in PT 364 that Schott argued for perceiving two different temporal strata in the development of Egyptian myth. While offering ritual texts were clearly of a ritual character, texts like PT 364 were narratives drawn from the ritualistic material of mortuary cult through the replacement of first person statements by the names of gods. Thus, for example, the first person in PT 197 (a priest filling the role of a god according to Schott) is supposed to have been replaced with the name of Horus in PT 364 (not a priest, but the god as such).[302] And thus did ritual take a step toward myth. In rejecting Schott's interpretation, Assmann draws upon PT 364 as his argument's chief evidence, observing that, properly speaking, in function the text is not precisely a

[302] See Schott 1964, pp. 37-42, with these two passages cited at his p. 38; "die dramatische Texte" mentioned by him correspond to the present work's offering ritual texts, and "die Hymnen mit der Namensformel" include texts like PT 364. To complicate matters, it is implied that the ritualistic statements converted into narratives were employed in divine cult, presumably on the level of Homeric Hymns.

narrative, a sequentially arranged account of events; rather, its mode is the achievement of a result through the illocutionary form of the direct address, as evidenced by the repetition of the second person throughout.[303] PT 364 is not a story, but an oral rite intended to make its audience into an *3ḫ*.

To Assmann's valid objection may be added another: the second offering ritual text cited within PT 364 *already* narrates the activities of Horus in the third person. As that narrative is present within an offering ritual text, it shows that the supposed conversion from ritual statement to mythic statement has already been achieved—in a ritual text. Thus, Schott is undoubtedly correct that, as has been long recognized,[304] the roles of deities such as Horus were performed by human priests in mortuary service, with the result that the statement in PT 198 that "Horus has filled you completely with his Eye" must be a reference to priestly action. Moreover, he is also undoubtedly correct that statements like this are narrations; however, what they narrate is not a myth or a fragment of a myth, but rather the prior accomplishment of that priestly action. Uttered within the context of an offering ritual, in which most every manipulated item is a foodstuff

---

[303] See Assmann 1977b, pp. 22-23, with PT 364 presented as an example of the Egyptian mode of "verklären" versus "erzählen", inasmuch as it is dominated by repeated references to the deceased in the second person. Though not referenced there, the discussion of Assmann 1977b is the context of Assmann 2002, pp. 30-31. Although the position of Assmann 1977b concerning myth and narrative (see esp. pp. 20-21) are critiqued by Baines 1991, pp. 89-92, his criticisms do not address the distinction between "verklären" and "erzählen".

[304] See already Blackman 1998a [1918], pp. 121-123; and, for example, Sauneron 2000, p. 67, for the roles of Isis and Nephthys played by priestesses, on which see further Münster 1968, pp. 23 and 53-70. On the role of Horus adopted by officiants in mortuary cult, see already Rusch 1917, p. 76 n. 2; and Assmann 1976, pp. 40-41; Assmann 2001a, p. 51; and Hays 2002, pp. 164-165 with nn. 85-86. For Thoth's relationship to the priesthood, see above n. 161.

emblematic of the Eye of Horus, the conclusion is inexorable that the "filling" (*mḥ*) refers to the ethereal consumption of food and liquids by the deceased.[305]

It is precisely because the function of this statement is to summarize an act or actions already accomplished that PT 198 lacks the specification of an item; it is a purely oral reference to accomplished rites that included a physical component. So also with PT 357 and 364: in orally citing from offering ritual texts while omitting the specification of items to be manipulated, they connote the performance of the corresponding rites, but they do not prescribe the performance of accompanying physical actions. Nevertheless, in citing from offering ritual texts, in making allusion to actions carried out during their performance, and in sharing the same performance structure, it may be presumed that resurrection texts shared the same general context as offering ritual texts: mortuary service.

Interpreting resurrection texts as being originally performed within the context of mortuary service helps explain later features of their display. In the Middle and New Kingdoms, resurrection texts can be found juxtaposed to scenes of mortuary service of precisely the same character as those discussed in the preceding chapter, complete with ritualists and offering lists. The first example of this kind occurs with PT 223 in the cultic

---

[305] Even more generally, the Eye of Horus as oil—something that is not eaten—is said to be the instrument of filling the deceased, as at PT 72 Pyr 50b (W): *mḥ.n(=i) n=k ỉr.t=k* (*m*) *mḏ.t* "(with) oil have I filled your eye for you"; PT 637 Pyr 1801a (N): *ỉ.mḥ(=i) ṯw ỉm=s* "let me fill you with it"; Pyr 1800b-c (N): *ỉw.n(=i) ḫr=k ḏd-ṯ | ỉ.mḥ(=i) ṯw m mḏ.t pr.t m ỉr.t ḥr* "I also have come to you, even that I fill you with the oil which went forth from the Eye of Horus". The general relationship of the Eye of Horus to fullness and emptiness is indicated at PT 605 Pyr 1682b (N): *mḥ.n ḥr ỉr.t=f šw.t m ỉr.t=f mḥ.t* "after Horus filled his empty eye with his full eye", and as the *mḥ.t* "the full one", it in turn is within the deceased, as at PT 48 Pyr 36c (W): *mḥ.t ỉm=k* "let the full one be in you". For the Eye of Horus being eaten, see PT 46 Pyr 35c (W): *wnm=k* "that you may eat (it)"; PT 123 Pyr 78a (W): *wnm=k* "and eat (it)"; PT 219 Pyr 192b (W): *wnm.t.n=k ỉr.t* "what you have eaten is the Eye"; CT 935 VII 136o (A1C): *ḫwn ỉmỉ ỉr*(*.t*) *ḥr wnm n=k sw* (let me give you) "the pupil which is in the Eye of Horus; eat it". See also PT 90 Pyr 61a (W): *nḏs wnm.t.n stš ỉm=s* "little is what Seth ate of it"; PT 145 Pyr 88c (W): *nḏs wnm.t.n stš ỉm=s* "little is what Seth ate of it"; CT 935 VII 136m (A1C): *nḏs.t wnm.t.n stš ỉm=s* "little is what Seth ate of it".

area of a Middle Kingdom tomb at Meir.[306] The same text appears in similar context in the cultic area of the New Kingdom tomb of Rekhmire at Thebes, together with the resurrection texts PT 222 and 224.[307]

Tellingly, PT 224 in the latter case receives the title *r³ n(i) ꜥq r wḏb ḫ.wt* "utterance of going in to the reversion of offerings".[308] The title underscores the relationship of the text to the offering ritual, since the reversion of offerings occurs at the very climax of the offering ritual[309] and is represented by the offering ritual text PT 199.[310] Thus, in being performed at the "going in to the reversion of offerings", PT 224 is being presented as being performed prior to that rite. Another resurrection text is temporally positioned adjacent to the offering ritual with a Middle Kingdom copy of PT 213, which on the coffin M1C receives the title *r³ n(i) s³ḫ.w m-ḫt wḏb ḫ.wt* "utterance of *s³ḫ.w* after the reversion of offerings".[311] Thus one sees that, at least in later periods, some resurrection texts were performed before and after portions of the offering ritual and are inscribed in juxtaposition to depictions of mortuary service.

2. RESURRECTION TEXTS AS A TRADITION

Assuming the original setting of resurrection texts to be mortuary service, one must consequently see that they, like offering ritual texts, underwent a transformation in

[311] This title being noted by J.P. Allen 1994, p. 17.

setting; the ritual script became a representation of rites. And similarly to offering ritual texts as with all other types, the complex of resurrection texts transferred to the burial chambers of Old Kingdom pyramids was not fixed in composition and order, since the static phenomenon of recurring series was in tension with the variability of the total inventory of texts. With resurrection texts it was a matter of a living tradition, enlivened from pyramid to pyramid by modifications in composition and order.

If variability in composition and order is an indication of the type's living nature, then the type continued to live in the Middle Kingdom, for the same dynamic was manifest then as well. To continue with Sequence 84 as a touchstone, there are sequences not attested before the Middle Kingdom that take some of its component texts and recombine them with others,[312] and there are new sequences consisting entirely of components from it but in different order.[313] The recombination and rearrangement of its texts show that arrangements of resurrection texts continued to undergo editorial adjustment, with that adjustment constituting a sign of later engagement with the same material.

The Middle Kingdom editors of mortuary literature drew liberally from the palette of Old Kingdom resurrection texts: of about one hundred and eighty texts identified in

---

[312] Sequence 72 consisting of PT366 PT368 on KH1KH/S, and Ps/inner coffin, and Tchannehibu/inner coffin; Sequence 74 consisting of PT368 PT373 on KH1KH/S and Nesuizet/xL; Sequence 75 consisting of PT368 PT593 on Sq10C/BO and Sq3Sq/L; Sequence 115 consisting of PT593 PT447 on Sq3Sq/L and Sq5Sq/BO; Subsequence 189 consisting of PT356-357 PT364 on Sq13C/L; Subsequence 195 consisting of PT368-369 on Sq13C/L; Subsequence 201 consisting of PT593 PT356-357 PT364 PT677 PT365 PT373 CT516 PT422 PT374 CT517 PT424 PT366 on B10C/L; Subsequence 202 consisting of PT593 PT356-357 PT364 PT677 PT365 PT373 CT516 on Sq4C/BO and S/S/E--C/W-E--S/N; and Subsequence 228 consisting of PT429-430 PT588 PT431-432 on S1C/xL.

[313] Sequence 73 consisting of PT367 PT356 on T1C/S/S and L-MH1A/L; Subsequence 136 consisting of PT446 PT428 PT447 on Sq4Sq/L; Sequence 86 consisting of PT448 PT451 on L3Li/B and Sq10C/BO; Subsequence 137 consisting of PT451 PT589 on Sq10C/BO; Sequence 89 consisting of PT451-453 PT367 on L3Li/B and T1C/S/S; Subsequence 145 consisting of PT428 PT447-448 PT450-451 on Sq5Sq/L.

this chapter, nearly half were copied onto Middle Kingdom sources in more or less verbatim form.[314] An indication of their importance to the Middle Kingdom officials making use of them is in their tremendously high frequency of attestation. Above all, PT 213—called *r3 n(i) s3ḫ.w m-ḫt wḏb ḫ.wt* "utterance of *s3ḫ.w* after the reversion of offerings" in one Middle Kingdom source[315]—is second in frequency of attestation[316] to just one Coffin Text, CT 355.[317]

Another sign of the tradition's life is in the production of Middle Kingdom versions of Old Kingdom resurrection texts, but with modifications extensive enough to warrant their being viewed as variants rather than more or less verbatim copies. For example, PT 659 may be compared to its variant, CT 65, the latter receiving the title *rḏi.t mw t.w n 3ḫ m3ʿ.w* "giving water and bread to a true *3ḫ*"[318] in one exemplar:

PT 659 Pyr 1860-1869 (N)

1860a Recitation.
1860a Indeed, this your going,
1860b indeed these your goings,
1860c are the goings of Horus in seeking his father Osiris.
1861a Let his bearers go, his runners hurry,
1861b his announcers hasten!
1862a Go to Re,
1862a and say to Re, Upraised of Arm in the East,
1862b that he is come as a god.
1862b Let Neferkare thus stand at the Two Chapel Rows of the horizon,
1863a and may you hear <his> words, O Re, (he) being a god, being Horus of Mestit:
1863b 'I am your brother,
1863b being Soped.'
1864a Behold: he is come;
1864a behold: he is come;
1864b behold: your brother is come;
1864b behold: Mekhentirti is come.
1865a If you do not know him,
1865a-b then pass the night in his embrace until your efflux ends,
1865c (he) being your one of the calf, being this Herdsman.
1866a Receive these white teeth of yours in a bowl;
1866b go around them with an arrow, in this their name of 'arrow.'
1867a Your foreleg is in the Thinite nome;
1867a his hindleg is in Nubia.
1867b Descend as the jackal of Upper Egypt, as Anubis Master of the Herdsman's Tent!
1868a-b May you stand at the Great Stair [as Geb, foremost of] his Ennead.
1869a Let your heart be yours;
1869a your Ka be Neferkare's!
1869b Let Neferkare provide your house;
1869b let Neferkare make firm your gates.

CT 65 I 276d-279 (T2C)

I 276e I have brought you, O my father:
I 276f I have brought you, O my father!
I 276g-7a Go to the Mounds of those of Pe
I 277b and pass through the Mounds of those of Nekhen!

I 277c O my father, Horus is your scribe,
I 277d Seth is your *sole one,
I 277e your hands at your meal.
I 277f May you ascend to the sky;
I 277g may you not give to them!
I 277h May you go these your goings,
I 277i as Horus goes in seeking his father Osiris;
I 278b let your bearers go, your runners who are in the earth hurry
I 278c and say to Re, the one upraised of brow in the East,
I 278d that you have ascended as a god,
I 278e that you have gone as a god,
I 278f that you have descended as a god,
I 278g you being *fragrant in this your name of
I 278g Sopedu.
I 278h It is Anubis, Wepwawet,
I 278i and Mekhentinirti
I 278i-9a who much make you well,
I 279b who put him with your calves for you:
I 279c he is the one who guards them for you upon earth.
I 279d Your foreleg is in the Thinite nome;
I 279e your lower leg is in Nubia:
I 279f your Ba is behind you;
I 279f your might is before you,
I 279g they having been set upon you.
I 279h I am your heir; I am your survivor.

The modifications are numerous: CT 65 attaches a new beginning and a different end, removes and modifies sections from the middle and adds others. And yet the new text maintains the same order of passages, no matter how altered the overall text has become, with the result that the two texts are still recognizably related. The production of variants like CT 65[319] is a further indication that the tradition of resurrection texts continued to live in the Middle Kingdom.

[319] CT 28 (< PT 595); CT 42 (< bPT1013 PT646 bPT645A); CT 66 (< bPT 1009); CT 73 (< PT 532); CT 327 (< PT 457); CT 349 (< PT 247); CT 516 (< fPT 721); CT 754 (< PT 670); CT 833 (< PT 436).

Finally, new texts were generated in the Middle Kingdom that possess motifs and the performance structure characteristic of the resurrection type. CT 835 can serve as illustration:[320]

CT 835 VII 36a-h (T1C)

VII 36a-b *wsir N. pn | n rḏi.n ḥr znw=k*
VII 36c *rḏi.n n=k ḥr ḫft(i)w=k ḫr=k*
VII 36d *rḏi.n n=k ḥr nṯr.w*
VII 36e *šms=sn kw*
VII 36f *sḫm*[*=k*] *im=sn*
VII 36g *nn ibꜣ im=sn*
VII 36h *m-k ḏḥw.ti iʿb sn*
VII 36h *i.tm ir*(*i*)*t=sn*

VII 36a O Osiris N., Horus does not permit that you suffer,
VII 36c Horus having put your enemies under you for you,
VII 36d Horus having given you the gods,
VII 36e that they serve you,
VII 36f that [you] have power over them,
VII 36g there not being one who would dance among them.
VII 36h Behold Thoth, who joins them (*sc.* your limbs[321]),
VII 36h that what pertains to them may cease.

Half of the texts's clauses constitute motifs characteristic to Old Kingdom resurrection texts: Horus places the beneficiary's enemies under him (*rḏi ḥrw ḫfti ḫr*),[322] he has power over the gods (*sḫm m nṯr.w*),[323] a god joins his limbs (*iʿb sn*),[324] and

[320] Other examples of this kind include CT 42, 44-45, 47-48, 50-51, 63, 72, 74, 235, 520, 523, 833, 838, 840, and 850.

[321] See PT 368 Pyr 639b (M): *rḏi.n=f iʿb ṯw ḏḥw.ti i.tm ir*(*i*)*t=k* "he (*sc.* Geb) having caused that Thoth join you, with what is against you coming to an end".

[322] See above n. 19.

[323] See above n. 119.

[324] See above n. 25.

negative attributes pertaining to them are eliminated (*tm irit=sn*).[325] And yet, as they are not combined in this fashion before, CT 835 does not represent a variant of any single resurrection text; it is a new text replete with motifs characteristic of the older type.

D. SUMMARY

Texts of the resurrection type are characterized by a sacerdotal peformance structure and a set of distinctive motifs, especially dealing with the resurrection of the deceased and the reconstitution of the corpse. They are also concerned with the specific actions and attributes of the divinities Nut, Geb, Horus, Seth, Atum, Isis, Nephthys, and Anubis, resulting in the beneficiary's divine and perfected state, with him incorporated among the gods. In addition to allusions to embalming and the rejection of the buried condition, there are references to the performance of ritual, physical acts. These last may be understood as simply that—as allusions, as references, as verbal evocations of such acts—since, unlike offering ritual texts, there is little to speak of in respect to the specifications of items to be manipulated and actions to be performed by the officiants reciting the texts. Rather, on those grounds, resurrection texts may be regarded as purely oral in their manner of performance. But since they were performed by officiants for the deceased, they may be regarded as originally participating in the same mortuary service setting as offering ritual texts. Consequently, their transfer to a tomb setting may be understood in a similar light. In the recombination and rearrangement of texts to yield new series, in the production of variants, and in the generation of new resurrection texts, it is evident that the tradition invented with the inscription of resurrection texts in the pyramids lived on into the Middle Kingdom.

[325] See above n. 21.

SECTION TWO

TEXTS ORIGINALLY OF PERSONAL STRUCTURE

CHAPTER FOUR

APOTROPAIC TEXTS

A. SUBSEQUENCE 210

The sarcophagus chambers of two Middle Kingdom tombs at Saqqara, Sq1Sq and Sq2Sq, present an identical series of texts on their north-to-west and west walls respectively: Sequence 150, consisting of CT 397 PT 226-243.[1] The first text of this series, a ferryman text[2] first attested in the Middle Kingdom,[3] may be regarded as an independent composition, since it twice elsewhere appears completely bounded—marked off from the texts alongside it by graphically depicted water.[4] In Sq1Sq and Sq2Sq, the separation of CT 397 from PT 226-243 is brought about by the presence of a title just before the presumably more ancient texts. Since no other paratextual indication of

---

[1] Additionally, Subsequence 225, consisting of CT397 PT226-231, occurs on T1Be/BO. Subsequence 226, consisting of CT397 PT226-229, occurs on T3L/FR; CT 397 at the head of this subsequence is truncated in mid-statement, at V 81c (T3L 163): *ir.t*(*i*)=*f*(*i*) *n*=*t*(*n*) *n sk* "as for that which he will make for you, ... will not perish"; PT 226-229 interrupt at this point, with CT 397 continuing where it left off, beginning with the omitted suffix-pronoun subject of *sk*, at V 81c (T3L 173): *=s n ḥtm<=s> m ỉ3 pn ḏ.t* "it..., nor will <it> be destroyed in this land for ever." The disjointed nature of the interruption indicates a copyist's random mistake rather than an intelligible, intentional modification. One may note also that PT 230 appears after the second portion of CT 397 on T3L.

[2] By virtue of its graphic boundaries, it is described as a "Bild-Text-Komposition", on a par with the Book of Two Ways, by Hermsen 1995, p. 76 with n. 19.

[3] A text at Ibi/S/S (Aba 587-596) is related to CT 397, as observed by Bickel 2004, pp. 91 and 113; Bidoli 1976, pp. 27 and 34, refers to the Ibi text as a prototype of CT 397; no doubt based on Kees 1955, pp. 176-185, T. G. Allen 1950, p. 59, refers to it as "BD 99 «Einl.»". The Ibi text is followed by the ascension text PT 475.

[4] On the coffins Sq1C and M2C; see CT V 75, nn. *3 and *4. In Sq1C, CT 397 appears on BO, while Subsequence 212 consisting of PT226-240 appears on B. Compare Sq2C/B, where the same subsequence is followed by CT 397.

content occurs in the sequence, the title, *r³ n*(*i*) *ḫsf rrk m ḫrit-nṯr* "utterance of repelling the Rererek-serpent in the necropolis," evidently embraces all of the older texts under its heading, in addition to separating them from CT 397.

Even though the word *rrk* is not attested in Old Kingdom exemplars of Pyramid Texts,[5] PT 226-243 appear together in that order already in the pyramid of Wenis, sarcophagus chamber west wall, as well as on three later sources.[6] The title is appropriate to the texts of this series, labelled Subsequence 210, since their principal concern is the warding-away of hostile creatures, especially serpents.

Virtually all of them are addressed to hostile entities. Vocatives specifically to serpents occur in at least six texts, where they are called by generic names (*ḥiw* "Hiu-serpent"[7] and *ḥpnw* "Hepenu-serpent"[8]) and epithets[9] of varying degrees of obscurity, such as *ḥri-ri.t=f* "one who is over his *door",[10] and *imi-nʿw.t=f* "one who is in his

---

[5] See the list of serpent-names at Meuer 2002, pp. 273-276. Additionally, although the term *ḫrit-nṯr* is well attested in the Old Kingdom outside of the pyramids, it is exceptionally rarely attested within them, with the sole instance of it known to me being at fPT 721 Pyr 2242a (N): *pḫr n=k imiw ḫrit-nṯr* "those who are in the necropolis serving you".

[6] The subsequence occurs also at S/S/E, Bek, and TT 33.

[7] PT 226 Pyr 225c (W) and PT 236 Pyr 240a (W); and perhaps also as suffix to *ikin* at PT 238 Pyr 242a (W): *t nỉ tk.n=k ikin-ḥii* "the bread cast down by the one whom you attacked, O Ikin-serpent" and Pyr 242b (W): *t=k nt*(*i*)*=k nỉ tk.n=k ik*(*i*)*n-ḥii* "is your bread which is yours, cast down by the one whom you attacked, O Ikin-serpent", although the passage is far from clear; on *ikin-ḥii*, see Leitz 1996, p. 416, or read *ikny* with Borghouts 1971, p. 101 n. 184. On the term *ḥiw* as "serpent" and its typhonian connotations emerging in the Coffin Texts, see Ward 1978, pp. 26-29; and Westendorf 1970, pp. 147-148.

[8] PT 227 Pyr 227b (W). Presumably to be distinguished from the later *ḥnp*-serpent, according to Sauneron 1989, p. 153.

[9] For insight provided by these kinds of epithets (or "'sprechende' Namen) on the character of these and other serpents, see Meuer 2002, pp. 277-279.

[10] With coiled-serpent determinative at PT 234 Pyr 238a (W).

thicket",[11] and *iš.w inb qꜣʿ.w ḏb.t* "one whom the wall spat out, brick-vomit".[12] Since these epithets do not always receive a determinative,[13] further instances of vocatives by epithet may indicate serpents in still other texts (*mtw.ti* "poisonous one",[14] *ꜣw* "long one",[15] *nti ti* "one who is trampled",[16] and *tf i.tm im* "spitter who does not lament"[17]). But at least two of the texts address a scorpion (*srq.t*),[18] with two more addressing the gods

---

[11] With coiled-serpent determinative at PT 240 Pyr 245a (W). Compare Pap. Tur Hier 54003 R 9: *ḥfꜣw imi iꜣ.t=f sptḫ.w imi-nꜣii.t=f* "O Hefau-serpent who is in his mound, O stretched-out serpent who is in his thicket".

[12] PT 241 Pyr 246a (W); identified as a serpent by Meuer 2002, pp. 273, and 275-276. Compare the expression to CT 461 V 334b (B3L): *iš=i tr ḏb.t m i{mi}<z> n(i) it n(i) mn* "let me spit out the block from the tomb of the father of (name)".

[13] Being omitted from *imi-nʿw.t=f* in W but present in T.

[14] PT 232 Pyr 236a (W). For how poison is dealt with in this type of texts, see Meuer 2002, pp. 279-280. For poison's responsiveness to magicians and gods, see Sauneron 1989, p. 12 n. 6, and Pap. Turin Hier 54003 R 9-10 (Rocatti 1970): *ḥfꜣw ... | ... pšn mtw.t=k* "O Hefau-serpent, ... dispersed is your poison", Pap. BM 9997 IV 10-11 (Leitz 1999, pl. 4): *ḥkꜣ*[*.w=i r*] | *ḫft.*(*i*)*w=i r nḥm ʿ n*(*i*) *mtw.t n*[*ḥꜣ.w-ḥr*] "[my] magic [is against] my enemies, to take away the action of the poison of the Ne[haher]-serpents", and Pap. Brooklyn 47.218.48+85, 2, 19-20 (Sauneron 1989, §41): *mdw.t=f r sḫr mtw.t=k m s.t=s* "his (*sc.* Re's) speech will knock down your poison from its place".

[15] PT 235 Pyr 239a (W). The reading *ꜣw* is through the tripling of the *ꜣ*-bird, so as to form a pseudo-plural vocalization, in this passage and at PT 232 Pyr 236b. *tiw*-birds alternate with *ꜣ*-birds among exemplars at PT 281 Pyr 422a and c (WT) and PT 286 Pyr 427a (WTP). The *ꜣw*-serpent possibly appears also at PT 285 Pyr 426d (W), though there employing the biliteral *ꜣw*. There is reason to understand that the word's referent is a serpent, owing to the parallelism of the statement containing it at PT 232 Pyr 236b: *ꜣw mw.t=f zp-2* "O Au-(*serpent) of his mother, O Au-(*serpent) of his mother" with PT 287 Pyr 428a: *nni mw.t=f nni mw.t=f* "O Neny-serpent of his mother, O Neny-serpent of his mother"; for the identification of the *nni* as a serpent, see the ophidian determinative at PT 382 Pyr 670c: *nnii* "Neny-serpent".

[16] PT 235 Pyr 239b (W).

[17] PT 237 Pyr 241a (W).

[18] PT 227 Pyr 227b (W) and PT 230 Pyr 234a (W). The scorpion is not universally hostile in the Pyramid Texts; see Stoof 2002, pp. 106-107. For the scorpion and other hostile beings in the type of text under investigation, see below and Meuer 2002, p. 279.

Khaytau (*ḫ ꜥii-tɜw*)[19] or Hem (*ḥm*).[20] Thus *rrk*, though typically receiving an ophidian determinative,[21] in context may be understood not exclusively as exactly that kind of creature but rather as any hostile beast of a more or less unreal kind.[22] Understanding *rrk* in this way helps explain why the serpent determinative is omitted from it in several instances of the aforementioned title.[23]

An indication of the danger posed by the creatures of these texts surfaces briefly in one motif, where the creature is said to swallow something, as with *ꜥm.n=s wr.t | ꜥm.n ns ḥḏ.t wr.t* "for it (*sc.* the White One[24]) has eaten the Great One (*sc.* the crown of Lower Egypt), the tongue of the White One having eaten the Great One".[25] Presumably because of the danger, vigilance against them is expressed in four texts, through *mɜɜ* "to see" and

---

[19] PT 238 Pyr 242c (W). On the deity's origin at Byblos, see Stadelmann 1975, col. 902; on *ḫ ꜥi-tɜw* representing the transcription of a god of Lebanon, see Schneider 2000, pp. 215-216.

[20] PT 243 Pyr 248b (W): *i ḥm t(i)f* "O Hem, run away". The god occurs also at PT 556 Pyr 1382b-c (P): *nis r=f it(=i) wsir P. ir ḥm | ir sm.t(i)* "my father Osiris Pepi thus making summons to Hem and to Semti".

[21] See Wb ii 440.2 and Van Der Molen 2000, p. 283.

[22] The word does not appear among the many different terms for serpents in Pap. Brooklyn 47.218.48+85, a late quasi-scientific treatise on serpents, on which see Sauneron 1989, pp. 145-165. Borghouts 1999, p. 156, holds for a "cosmic character" for serpents in the texts under discussion.

[23] At L-MH1A (before Subsequence 215, consisting of PT226-228), L1NY (before Subsequence 211, consisting of PT226-241), T1Be (after CT 397 of Subsequence 225, consisting of CT397 PT226-231), and T3Be (before Subsequence 85, consisting of PT226 and 228).

[24] *ḥḏ.t* here constituting the name of a serpent according to Meuer 2002, p. 275.

[25] PT 239 Pyr 243a-b (W). The motif of swallowing occurs also at PT 228 Pyr 228b (W): *ꜥm.n=f n=f i.nsb.n=f* "for it has swallowed for itself the one whom it had licked". For *i.nsb.n*, compare PT 166 Pyr 98c (W): *m-n=k ir.t ḥr i.nsb.t.n=sn* "take the Eye of Horus, which they licked".

ḥr "sight", as with *ḥr ḥr=k* "sight is upon you."[26] But the majority of motifs involve their repulsion and suppression, precisely the sort of activity indicated by *ḫsf* in the subsequence's Middle Kingdom title. Above all, the repelling is accomplished by imperatives to lie down, slither away, or fall down (*sḏr*, *zbn*, *ḫr*, and possibly *ḫbḫ*) in five or six[27] of the eighteen texts of the subsequence, as well as exhortations that the hostile creature be overturned or on its back (*pnˁ*, *ḥr tz*, *stȝz*).[28] At the same time, the verb *šni*, "to encircle," is employed to indicate restraint or binding in two spells, as with *šn p.t šn tȝ šn mḏr ḥȝ rḫi.t* "the sky is encircled: the earth is encircled: the one who goes around the masses is encircled",[29] while the sense of binding may underlie the word *bi*, as with

---

[26] PT 240 Pyr 245a (W), following Leitz 1996, p. 406 (on Pyr 238a), as opposed to Ogdon 1989, p. 66, who understands the expression to mean "upon your face". The other instances of this motif appearing at PT 226 Pyr 226b (W): *mȝ tw rˁ* "and let Re see you"; PT 228 Pyr 228a (W): *ḫr ḥr r ḥr* "if sight fall upon (lit. to) sight"; and PT 234 Pyr 238a (W): *ḥr ḥr=k* "sight is upon you". On this motif, see Meuer 2002, p. 287.

[27] PT 226 Pyr 225c (W): *sḏr zbn* "lie down! Slither away!"; PT 229 Pyr 229c (W) and PT 233 Pyr 237b: *i.ḫr zbn* "fall down! Slither away!"; PT 237 Pyr 241b (W): *sḏr* "lie down!"; and PT 240 Pyr 245b (W): *zbn* "slither away!" One may add PT 227 Pyr 227c (W): *ḫbḫ* {*n*}<*tȝ*> "slither into <the earth>" (see Mathieu 1996, p. 290 with n. 5 for the correction). On *sḏr*, *zbn*, and *ḫr*, see Meuer 2002, pp. 282-283, and 285; and Ogdon 1989, pp. 63-65.

[28] PT 226 Pyr 226b (W): *pnˁ* "be overturned"; PT 227 Pyr 227c (W): *pnˁ tw* "overturn yourself"; PT 234 Pyr 238a (W): *hȝ ḥr tz=k* "down on your back (lit. descend onto your vertebra)"; PT 240 Pyr 245a (W): *stȝz.ti* "lie down on your back". On the meaning of *stȝz* as "to be upon the back", see Wb iv 357 (*stȝs*) and 362 (*sts*); and Meuer 2002, p. 283 with n. 1; for the sense of "to be stretched out", see Vernus 1991, p. 29 n. 30.

[29] PT 230 Pyr 233b (W). The other two instances being from PT 226, at Pyr 225a (W): *šn nˁw in nˁw* "N'au-serpent is encircled by N'au-serpent" and Pyr 225b (W): *šn bḥz ḫȝbw pr m ḥzp* "the calf of the hippopotamus is encircled"; for the meaning of *bḥz ḫȝbw*, see Lacau 1951, pp. 13-19; and Leitz 1996, pp. 393-394. On *šni* in the Pyramid Texts, see Anthes 1961, p. 87, who understands its meaning as "umschließen, festhalten, in magischem Bann halten". On the hostile dimension of the act of encircling, see Ritner 1993, pp. 64-66.

kbb hi(*w*) *ti.ti bi.ti* "be *restrained, O Hiu-serpent, being trampled and *bound",[30] although interpretations of the passage's semantic content get no farther than guesswork. The hostile being is the direct or indirect object of violence as by trampling (*ti*) in the passage cited just now and in a vocative mentioned above,[31] or by being otherwise attacked, as with *ḥfꜣw pzḥ ḫtḫt pr* "the Hefau-serpent is bitten throughout the house".[32] All but one[33] of the texts of Subsequence 210 possess one or more of these motifs. The manner in which they are deployed may be illustrated by a concrete example.

PT 227 Pyr 227 (W)

227a *ḏd-mdw*
227a *ḥsq*(=*i*) *m tp kꜣ km wr*
227b *ḥpnw ḏd*(=*i*) *nn r*=*k*
227b *ḫsr-nṯr srq*(.*t*) *ḏd*(=*i*) *nn r*=*k*
227c *pnꜥ ṯw*
227c *ḫbḫ* {*n*}<*tꜣ*>
227c *ḏd.n*(=*i*) *nn r*=*k*

---

[30] PT 236 Pyr 240a (W). The other instance in this subsequence being PT 237 Pyr 241a (W): *tf i.tm im i.b.w* "O spitter who does not lament, who is *bound". The structure of the statement, consisting of vocative plus attributive participle with negative complement, with additional attributive participle, is paralleled by PT 499 Pyr 1070a: *i tf i.tm mhii* "O spitter who does not forget". The existence of the verb *bi* may be induced from comparison of similarly structured statements bearing it under various orthographies: PT 285 Pyr 426d (W): *ḥ*(*w*) *ti i.bi.ti*; Pyr 426c (W): *ḥ*(*w*) *ti i.bi*; PT 236 Pyr 240a (W): *kbb hi*(*w*) *ti.ti bi.ti*; and PT 281 Pyr 422a (W): *kw kbb h*(*iw*) *ꜣw bi*; and PT 237 Pyr 241a (W): *tf i.tm im i.b.w*. Together with the phraseology appearing alongside it, the word *bi*, whatever it means, links these texts together.

[31] As well as probably at PT 243 Pyr 248a (W): *ḥts.wi ḥts.wi n ḏꜥm.wi zp-2 t is ti rw r*=*k* "two Hetes-scepters, two Hetes-scepters for the Djam-staves—twice—are as the bread which the lion trampled against you."

[32] PT 242 Pyr 247b (W); Meuer 2002, p. 275, treats *pzḥ* as an attributive participle rather than stative, yielding "beissende Schlange". The motif of the serpent being attacked occurs also at PT 227 Pyr 227a (W): *ḥsq*(=*i*) *m tp kꜣ km wr* "I will cut off even the head of the Great Black Bull-serpent (lit. I will cut off from the head...)" (on *kꜣ km wr* as a serpent, see Leitz 1996, pp. 396-397; and Meuer 2002, p. 275 with n. 6); and PT 230 Pyr 231a-b (W): *pzḥ.n W. tꜣ pzḥ.n W. gbb | pzḥ.n W. it n*(*i*) *pzḥ sw* "Wenis's having bitten the earth, Wenis's having bitten Geb, was Wenis's having bitten the father of the one who bit him". On this motif, see Meuer 2002, pp. 286-287.

[33] The exception being PT 231.

227a Recitation.
227a I will cut off even the head of the bull, the Great Black One!
227b O Hepnu-serpent, against you do I say this!
227b O god-beaten one, O scorpion, against you do I say this!
227c Overturn yourself;
227c slither into <the earth>,[34]
227c for I have said this against you!

PT 227 fits into a category of performance situation different than what is found for offering ritual texts and resurrection texts. In this text, the beneficiary speaks on his own behalf in the first person, and thus, from the point of view of the text, he is the one performing it. Two other texts of the recurring series similarly place the beneficiary in the first person, with *m ḫm w*(*i*) "do not forget me" in one[35] and *nii*(*=i*)[36] *nw pr m r3=k r=k ḏs=k* "I will cast down this which goes forth from your mouth against you yourself" in another.[37] In view of these instances of the beneficiary speaking for himself, when two texts refer to him in the third person,[38] they can be understood as having been edited away from the first according to the practice observed in Chapter One, especially since they are transmitted together with three texts preserving the first person. The performance

[34] See above n. 27 on the correction.

[35] PT 232 Pyr 236c (W).

[36] Compare Pap. Tur Hier 54003 R 1-8 R 7: *ni.w=i n=k sw* "and I will cast him down for you".

[37] PT 241 Pyr 246b.

[38] PT 230, as at Pyr 231a-b (W): *pzḥ.n W. t3 pzḥ.n W. gbb | pzḥ.n W. it n*(*i*) *pzḥ sw* "Wenis's having bitten the earth, Wenis's having bitten Geb, was Wenis's having bitten the father of the one who bit him" and PT 240, as at Pyr 244b (W): *ḫnd.n W. ḥr. zbn*(*.t*) *ḥr* "Wenis has trodden upon the *serpent-track of Horus" (on the latter passage, compare PT 378 Pyr 663b-c (T): *ṯbw.t ḥr ḫnd.t nḫi | nḫi n*(*i*) *ḥr ḥrd nḫn* "the sandal of Horus is that which treads the Nekhi-serpent, the Nekhi-serpent of Horus the Young Child" and PT 313 Pyr 503a (W): *zbn.t ḥr zp-2 zbn*(*.t*) *W.* [*i*]*m m bḫḫ pn ḫr*(*i*) *ikn.t nṯr.w* "the *serpent-track of Horus (twice) is the *serpent-track of Wenis, there in this fire which bears what the gods draw out".

structure of these three likewise helps situate the remaining texts of the subsequence, which make no reference to the beneficiary.[39] In short, because of the maintenance of the first person in some of the texts of the subsequence, and because of the tendency in the Pyramid Texts to edit texts away from the first, there is basis for interpreting all of them as personal recitations. In this respect, they are distinguishable from texts of sacerdotal structure, offering ritual and resurrection texts, and they are further distinguishable from them by their shared content. Even as this content distinguishes the texts from those of the preceding chapters, it also serves to draw the texts together; combined with a common performance situation, it is suggestive of a third type of text.

B. TEXTS OF MATCHING CHARACTERSTICS

Since Subsequence 210 appears in just one Old Kingdom pyramid, its identity as a recurring series is apparent only through consultation of post-Old Kingdom sources, when it is attested in the Middle Kingdom tomb of Senwosretankh and in the Late Period.[40] A later date holds also for its shorter segments: these also are attested only in

[39] PT 226, 228-229, 231, 233-239, and 242-243.

[40] See above n. 6.

the Middle Kingdom and afterwards.[41] Despite the fact that the identity of Subsequence 210 as a recurring series is discernible only through consideration of later material, the characteristics of its component texts are nevertheless not unique to its sole Old Kingdom source of attestation.

1. Recurring Series with Matching Characteristics

A first indication of their wider Old Kingdom distribution is the transmission of three of the component texts of Subsequence 210 alongside different texts in other recurring series from the pyramids: Sequence 97[42] and a subsequence of it,[43] and Sequence 135,[44] all three appearing on the antechamber, east wall. Their affinity in being transmitted together is matched by their affinity in content. A concrete example can illustrate how the different texts in these series are related to those of Subsequence 210.

---

[41] In the Middle Kingdom at Subsequence 212 consisting of PT226-240 on Sq1C/B and Sq2C/B; Subsequence 211 consisting of PT226-241on L1NY/L; Subsequence 213 consisting of PT226-230 on M7C/B; Subsequence 215 consisting of PT226-228 on L-MH1A/B; Subsequence 216 consisting of PT226-227 on Q1Q/S/E; Subsequence 219 consisting of PT229-240 on Q1Q/S/E; Subsequence 221 consisting of PT230-238 on L-PW1A/B. Note also Subsequence 85 consisting of PT226 PT228 on T3Be/B, exclusively containing texts found in Subsequence 210, but in different order, and two subsequences beginning with CT 397: Subsequence 225 consisting of CT397 PT226-231 on T1Be/BO; and Subsequence 226 consisting of CT397 PT226-229 on T3L/FR. After the Middle Kingdom at Subsequence 214 consisting of PT226-229 on Psamtik/2; Subsequence 215 consisting of PT226-228 on Teperet/X and Pediniese/110-18; Subsequence 217 consisting of PT227-233 in Psamtiknebpehti; Subsequence 218 consisting of PT227-228 on Pedineit/1, and Pediniese/110-18, and Tchannehibu/4; Subsequence 220 consisting of PT229-230 in Ahmose; Subsequence 222 consisting of PT232-234 on Pediniese/347-50; Subsequence 223 consisting of PT233-234 on Sq B/Z; and Subsequence 224 consisting of PT237-242 on Sq B/A. Note also some recurring series exclusively containing texts found in Subsequence 210, but in different order: Sequence 44 consisting of PT226 PT228-229 on Nesuqedu vault and Sq B/Y; Subsequence 85 consisting of PT226 PT228 on CJ 50246; Sequence 45 consisting of PT226 PT236 on Pedineit/1 and Tchannehibu/4; Sequence 46 consisting of PT234 PT242 on Pediniese/6 and Ps./9-11.

[42] See below.

[43] Subsequence 140, containing PT 233 in the series PT233 PT284-287 PT280 PT292 on P/A/E.

[44] Containing PT 240 and 227 in the series bPT729B PT240 PT227 fPT730 bPT502B bPT502D fPT731 bPT502E-F fPT732 on N/A/E and M/A/E.

Sequence 97 appears on the east wall of the antechamber of the pyramids of Merenre and Pepi II, and consists of PT 499, 289, 500, 297, 233, 284-287, 280, 292. Naturally the two series share the full contents of PT 233, as this text also appears as a component of Subsequence 210, but plenty of relations are to be found within the other texts of Sequence 97 as well. To bring focus upon its first text:

PT 499 Pyr 1070a-b (P)

1070a *ḏd-mdw*
1070a *ḥ3=k i tf i.tm mhii*
1070b *st3z*
1070b *z3w tw ⸢ḥ⸣ mds=i*

1070a Recitation.
1070a Back, O spitter who does not forget!
1070b Lie down on your back!
1070b Beware, lest my knife arise!

In this short text, the vocative *tf i.tm mhii* "spitter who does not forget" recalls *tf i.tm im* "spitter who does not lament"[45] of Subsequence 210, and the imperative *st3z* "lie down on your back" of PT 499 is equivalent in value to a hortatory stative, *st3z.ti*, found in Subsequence 210.[46]

PT 499 is not unique in its connections to Subsequence 210: most of Sequence 97's eleven texts show motifs already encountered. Vocatives specifically to serpents

[45] See n. 17 above.

[46] See n. 28 above.

occur in several texts[47] and once to a hostile non-serpent, with *mꜣ ṯif* "O lion, run away!"[48] Vigilance is expressed,[49] creatures are repelled by imperatives to lie down, slither away, or fall down (*sḏr*, *zbn*, *ḫr*),[50] there is a reference to a serpent being restrained or bound (in this case by *nṯi* instead of *šni*)[51] and a possible instance where a

---

[47] PT 285 Pyr 426b (W): *i ii* "O (eye)-injurer"; (on *ii* in this passage, compare Leitz 1996, p. 418); Pyr 426c (W): *ḥw.t ḫzii ḏ.t twr* "O storm of the vile one, O cobra, O reject"; Pyr 426d (W): *ꜣw* "O Au-(*serpent)"; PT 287 Pyr 428a (W): *nni mw.t=f nni mw.t=f* "O Neny-serpent of his mother, O Neny-serpent of his mother"; PT 500 Pyr 1071b (P): *imn wr pr m ꜥ.t imn.t* "O great hidden-(serpent), who came forth from the Hidden Chamber"; perhaps also PT 286 Pyr 427a (W): *ꜥbš.w m ꜣw š.w ṯmṯ iṯ hnw.w* "be drowned as the Au-(*serpent) of the lakes, O Tjemetj-*serpent"; Pyr 427c (W): *ꜣw šii ꜣw šii* "O Au-(*serpent) of the *lakes, O Au-(*serpent) of the *lakes", although the meaning of the text is far from clear; and perhaps also at PT 292 Pyr 433a (W): *n*(*i*) *tk tk=k n*(*i*) *tk.i ik*(*i*)*n-hi*(*w*) "that which was cast down of the one who was attacked, the one whom you attacked, is that which was cast down by the one who was attacked, O Ikin-serpent", although the meaning and rendering of the passage is far from clear.

[48] PT 287 Pyr 428b (W), where *mꜣ* has a lion-determinative. Meuer 2002, p. 273, understands this word to refer to a serpent. But compare the present passage with PT 288 Pyr 429c: *ṯif miw* "run away, O cat!"; and in the same light one may interpret PT 391 Pyr 687b: *miw miw* "O cat, O cat!" See also CT 369 V 31d (B2L): *iw wšꜥ.n=k qs.w miw.t ḥwꜣꜣ.wt* "and you have chewed the bones of the cat of putrefaction," where *miw.t* receives an animal-skin determinative. For other references to lions in the type of text under investigation, see PT 243 Pyr 248a: *ḫts.wi ḫts.wi n ḏꜥm.wi zp-2 t is ti rw r=k* "two Hetes-scepters, two Hetes-scepters for the Djam-staves—twice—are as the bread which the lion trampled against you"; PT 284 Pyr 425d: *pf rw m-ḫnw pn rw* "one lion within the other lion"; PT 294 Pyr 436b: *wḏḏ n=f zꜣw ṯw rw pr wḏ n=f zꜣw ṯw rw* "for whom it was commanded 'Beware, O lion!', for whom the command went forth, 'Beware, O lion!'"; PT 394 Pyr 690: *rw ḫꜣ rw n ꜥnḫ* "lion behind lion, for life"; and PT 551 Pyr 1351b: *rw* "O (forepart of a) lion!"; PT 551 Pyr 1351b: *pḥ.wi* "O rear (of a lion)!"; and possibly PT 281 Pyr 422b: *rw n*(*i*) *phti rw n*(*i*) *ptti phti ptti* "the lion of Pehti, the lion of Petjti, Pehti Petjti". Apotropaic texts specifically against lions are attested in the New Kingdom Pap. Turin 1999, as observed by Borghouts 1999, p. 165 with n. 63.

[49] PT 297 Pyr 441b (W): *mꜣ ṯw mw.t=k nw.t* "and let your mother Nut see you".

[50] PT 289 Pyr 430b (W): *i.ḫr zbn* "fall! Slither away!"; PT 297 Pyr 441a-b (W): *i.ḫr=k m ḥs=k zbn=k m wzš.t=k | i.ḫr sḏr zbn* "may you fall into your excrement; may you slither into your urine! Fall! Lie down! Slither away!"; and possibly also PT 286 Pyr 427b (W): *k*(*w*) *bn.w zbn.w ḥz n.wt* "then, O Benu, who slithers away, praised of the Red Crowns".

[51] PT 285 Pyr 426b (W): *i ii b*(*ꜣ*)*b*(*ii*) *nṯ sšꜣw* "O (eye)-injurer, O Babay, O you whom Shesau bound".

serpent is attacked,[52] and the word *bi*—however one wishes to translate it or not—appears in a configuration similar to what was encountered before.[53]

Subsequence 210's connections to Sequence 97 extend further; they are linked by five more textual points of contact. Enemies of the deceased are exhorted to go away (from the speaker) through imperatives, such as *ṯif* "to run away",[54] the verb *ḫr* "to fall" occurs with a serpent in the third person, as with *ḫr k3 n sḏḥ ḫr sḏḥ n k3* "the bull(-serpent) is fallen because of the Sedjeh-serpent; the Sedjeh-serpent is fallen because of the bull(-serpent)",[55] with this passage exhibiting also the discursive figure of reciprocal violence, another feature in common to both series.[56] More violence is signalled by the figure of the goddess Mafdet (*m3fd.t*), who acts aggressively for the beneficiary,[57] and both series contain texts with passages playing with the consonants *t*, *n*, and *k*, as with *t ni*

---

[52] PT 286 Pyr 427a (W): *ʿbš.w m 3w š.w ṯmṯ* "be drowned as the Au-(*serpent) of the lakes, O Tjemetj-*serpent"; for *ʿbš* "to drown" in a hostile sense, see PT 397 Pyr 692c: *ʿbš sw ʿbš sw* "drown it! Drown it!"

[53] PT 285 Pyr 426c (W): *ḥ(w) ti i.bi* "who would smite, who would trample, being *bound"; Pyr 426d (W): *ḥ(w) ti i.bi.ti* "smite and trample, being *bound". See above n. 30.

[54] PT 243 Pyr 248b (W) (Subsequence 210): *ḥm ṯ(i)f* "O Hem, run away" and PT 287 428b (W) (Sequence 97): *m3 ṯif* "O lion, run away!"

[55] PT 289 Pyr 430a (W) (Sequence 97). PT 233 Pyr 237a (W) (Subsequence 210): *ḫr ḏ.t pr.t m t3* "let fall the cobra which rose from the earth".

[56] PT 230 Pyr 233a (W) (Subsequence 210): *pzḥ nʿw in nʿ.t pzḥ nʿ.t in nʿw* "the N'au-serpent is bitten by the female N'au-serpent: the female N'au-serpent is bitten by the N'au-serpent"; PT 284 Pyr 425c (W) (Sequence 97): *ḥw zp3 in ḥw.ti ḥw ḥw.ti in zp3* "the centipede was smitten by He of the House, just as He of the House was smitten by the centipede"; PT 289 Pyr 430a (W) (Sequence 97): *ḫr k3 n sḏḥ ḫr sḏḥ n k3* "the bull(-serpent) is fallen because of the Sedjeh-serpent; the Sedjeh-serpent is fallen because of the bull(-serpent)".

[57] PT 230 Pyr 230c (W) (Subsequence 210): *tmm r3 n(i) šms.t in m3fd.t* "may the mouth of she who serves be shut by Mafdet"; PT 297 Pyr 440b-d (W) (Sequence 97): *n3š.wt nn iw.t(i) ḥr=k | m3fd.t ḫnt(i)t ḥw.t-ʿnḫ | i.ḥ(w)=s ṯw ir ḥr=k p3ḫ=s ṯw ir ir.t(i)=k* "the proscription of this one is come upon you, namely Mafdet, Foremost of the House of Life; let her strike you upon your face; let her scratch you in your eyes".

tk.n=k ikin-hii | t=k nt(*i*)*=k ni tk.n=k ik*(*i*)*n-hii*.[58] In short, the two series are connected in more ways than by just the motifs found repeated in one of them. With a network of connections between the components of Subsequence 210 and those of Sequence 97, one may see how the texts operate within a semantic field extending beyond the boundaries of the series holding them.

But the components of Subsequence 210 and Sequence 97 still constitute only a portion of a larger body of texts, since even more ancient groupings are related to them. There is, first of all, Sequence 135 mentioned above, to which may be added especially thirteen other recurring series attested in the Old Kingdom with no texts in common with Subsequence 210 at all;[59] in the pyramids of kings these are consistently found on the

---

[58] PT 238 Pyr 242a-b (W) (Subsequence 210): "the bread cast down of the one whom you attacked, O Ikin-serpent, is your bread, that which is yours, cast down of the one whom you attacked, O Ikin-serpent". PT 292 Pyr 433a (W) (Sequence 97): *n*(*i*) *tk tk=k n*(*i*) *tk.i ik*(*i*)*n-hi*(*w*) | *t=k nt*(*i*)*=k n*(*i*) *tk.n=k ik.n h*(*iw*) "that which was cast down by the one who was attacked, the one whom you attacked, is that which was cast down by the one who was attacked, O Ikin-serpent, is your bread which is yours, cast down by the one whom you attacked, the one whom the Hiu-serpent attacked", although the meaning and rendering is far from certain. J.P. Allen 1988, p. 38, comments upon the "abracadabra" character of such statements.

[59] Subsequence 102 consisting of PT281-283 on T/A/E; Subsequence 104 consisting of PT285-289 on T/A/E; Subsequence 105 consisting of PT286-287 on Nt/S/E; Subsequence 106 consisting of PT290-291 on T/A/E; Subsequence 107 consisting of PT295-296 on T/A/E; Sequence 53 consisting of PT280 PT292-293 on P/A/E and T/A/E; Sequence 54 consisting of PT283 PT285 on T/A/E and Nt/S/E; Sequence 55 consisting of PT290 fPT727 on N/A/E and M/A/E; Sequence 56 consisting of PT298 PT295 on N/A/E and Nt/S/E; Sequence 77 consisting of PT375-377 on P/D/E and T/A/E; Subsequence 141 consisting of PT499 PT289 on P/A/E; Subsequence 171 consisting of bPT502B bPT502D on P/A/E; Sequence 136 consisting of fPT731 bPT502E-F fPT732 bPT502H on P/A/E and N/A/E. From the Late Period, there is additionally Subsequence 103 consisting of PT284-285 in TT 33.

east wall of the antechamber (with one exception[60]), embracing over thirty texts altogether.[61] These series possess motifs found to be characteristic of Subsequence 210.

Thus there are vocatives specifically to serpents[62] and other hostile beings.[63] Vigilance expressed,[64] creatures are repelled by imperatives to lie down and slither away

---

[60] See the preceding note for Sequence 77, as it occurs on P/D/E in addition to T/A/E. Note that the pyramid of Neith, being a queen's pyramid, is not bicameral and thus has no antechamber.

[61] Including the texts of Sequences 97 and 135, there are a total of thirty-three texts in the specified series, namely PT 280-293, 295-298, 375-377, 499-500, bPT 502B, 502D-F, 502H, fPT 727, bPT 729B, and fPT 730-732.

[62] PT 281 Pyr 422d (W) (Subsequence 102): *nʿii nʿii* "O N'au-serpent, N'au-serpent" (on the *nʿii* serpent, see Sauneron 1989, p. 148); PT 288 Pyr 429a (W) (Subsequence 104): *hki hkr.t* "O Heki-serpent, O Hekeret-serpent"; PT 291 Pyr 432a (W) (Subsequence 106): *dr ḥkn.w=k bȝȝ-ḥḏ in. pr m fnṯ* "praise of you is expelled, O Baahedj, by the one who goes forth as the Fenetj-serpent" (on the *bȝȝ-ḥḏ* as "heller Baubewohner (eine Schlange)", see Leitz 1996, p. 420); Pyr 432b (W): *nḥm ḥkn.w=k bȝȝ-ḥḏ in pr m fnṯ* "praise of you is removed, O Baahedj, by the one who goes forth as the Fenetj-serpent"; PT 293 Pyr 434a (T) (Sequence 53): *imn* "O Imen-serpent" (with serpent-determinative); Pyr 434c (T): *imn* "O Imen-serpent"; Pyr 435b (W): *hiw* "O Hiu-serpent"; PT 296 Pyr 439b (W) (Subsequence 107): *ḥmṯ sn ni ḥmṯ.t* "O Hemetj-serpent, brother of a Hemetj-serpent" (see Meuer 2002, p. 274, for the identification of the *ḥmṯ* as a serpent); PT 298 Pyr 443c (W) (Sequence 56): *hiw sḏr kȝ zbn* "O Hiu-serpent, lie down! O Bull-(serpent), slither away"; bPT 502B Pyr 1073a (P) (Sequence 135; Subsequence 171): *ht.tii ht.tii šm ḥr. fḏ=f qȝb.w* "O Hetety, O Hetety who walks upon his four coils"; Pyr 1073b (N): *hiw* "O Hiu-serpent"; fPT 727 Pyr 2255b (Nt) (Sequence 55): *hiw* "O Hiu-serpent"; bPT 729B Pyr 2257a (N) (Sequence 135): *hiw sḏr hpn zbn* "O Hiu-serpent, lie down! O Hepenu-serpent, slither away!" Pyr 2257b (N): *imi-nȝw.t=f* "O One Who Is in His Thicket"; fPT 731 Pyr 2259 (N) (Sequences 135-136): *i gg* "O *staring-serpent" (compare PT 538 Pyr 1302a (P): *<n>gȝ{n} i.gȝ* "O *staring long-horned bull (*sc.* Seth), and see Borghouts 1973, pp. 140-142 with n. 9); PT 732 Pyr 2260 (N) (Sequences 135-136): *ptpt ȝ hpnw hip.ti imn.i* "Ah, one who is trodden, O Hepenu-serpent, O Hipeti-serpent, O Imeni-serpent" (see Meuer 2002, p. 274, for the identification of *hip.ti* as a serpent).

[63] PT 282 Pyr 423a (W) (Subsequence 102): *i ḫȝz.t tn* "O Khazet"; Pyr 423b (W): *ḫȝz.t tn* "O Khazet"; Pyr 423c (W): *ḫʿitȝ.w* "O Khaytau"; PT 283 Pyr 424b (W) (Sequence 54; Subsequence 102): *i iṯṯ* "O you who seizes" (or read *iṯ* with the same meaning); PT 288 Pyr 429c (W) (Subsequence 104): *miw* "O cat" (see above n. 48); PT 375 Pyr 660c and 661a (T) (Sequence 77): *ḏwʿ ṯsb.w* "O knife of the castrator"; fPT 730 Pyr 2258 (N) (Sequence 135): *mzḥ* "O crocodile".

[64] PT 290 Pyr 431a and 431b (W) (Sequence 55; Subsequence 106): *ḫr ḥr ḥr ḥr* "if sight fall upon sight".

(*sḏr*, *zbn*),[65] and they are the objects of violence.[66] The verb *nṯi* "to bind" appears again, though evidently with *mw* "water" as object,[67] and, last, the word *bi* appears in a configuration similar to what was encountered before.[68]

And yet there are even more connections between Subsequence 210 and these other recurring series—just as there were between it and Sequence 97—constituting what may be understood as additional motifs characteristic of the type. By imperatives, enemies of the deceased are exhorted to go away from the speaker, as with *ṯif* "to run away",[69] *zi* "to go",[70] *nʿi* "to go",[71] and *pri* "to go out".[72]

---

[65] PT 293 Pyr 435b (W) (Sequence 53): *sḏr* "lie down"; PT 298 Pyr 443c (W) (Sequence 56): *hiw sḏr kꜣ zbn* "O Hiu-serpent, lie down! O Bull-(serpent), slither away"; bPT 502B Pyr 1073b (P) (Sequence 135; Subsequence 171): *m*(*ii*) *sḏr m pr mw.t=k wn.t*(*i*) [*hiw*] *sḏr* "come! Lie down in the house of your mother, as you are! [O Hiu-serpent], lie down"; bPT 729B Pyr 2257a (N) (Sequence 135): *hiw sḏr hpn zbn* "O Hiu-serpent, lie down! O Hepenu-serpent, slither away!"; Pyr 2257b (N): *zbn ḫr nw* "slither away because of Nu".

[66] fPT 732 Pyr 2260 (N) (Sequences 135-136): *ptpt ꜣ hpnw hip.ti imn.i* "Ah, one who is trodden, O Hepenu-serpent, O Hipeti-serpent, O Imeni-serpent".

[67] bPT 502H Pyr 1076 (P) (Sequence 136): *P. i.sp.i ṯmi sn nṯi mw* "Pepi is the one who lashed together and *formed, who untied and bound together the water".

[68] PT 281 Pyr 422a (W) (Subsequence 102): *kw kbb h*(*iw*) *ꜣw bi* "then the Hiu-serpent is *restrained and the Au-(*serpent) *bound".

[69] PT 288 Pyr 429c (W) (Subsequence 104): *ṯif* "run away".

[70] PT 288 Pyr 429a (W) (Subsequence 104): *i.zi r=k* "go"; PT 377 Pyr 662e (T): *i.zi r=k ir=s* "go then".

[71] PT 281 Pyr 422d (W) (Subsequence 102): *nʿii nʿii* "go, go".

[72] fPT 731 Pyr 2259 (N) (Sequences 135-136): *pr n=k m wḫ*(*ꜣ*).*t* "go out into the darkness".

The verb *ḫr* "to fall" occurs again with a serpent in the third person, with[73] or without[74] the discursive figure of reciprocal violence, and the goddess Mafdet (*mꜣfd.t*) acts violently for the beneficiary in two more texts.[75] Finally, present in both Subsequence 210 and these related series are two additional motifs, where a pelican is said to fall into water (*ḫr ḥm-psḏ.t m mw/ḥꜥp*),[76] and the origin of serpents is localized as the earth (*pri m tꜣ*).[77] In short, the series are connected to Subsequence 210 in more ways than just the expressions found to be characteristic of that particular series. As there is a network of connections between these other recurring series and the components of Subsequence 210, one sees its texts engaged in a semantic field extending beyond the boundaries of any single text or series; from this point of view the subsequence's texts represent a portion of a wider ranging type, expanded now to include the texts of the recurring series related to it.

---

[73] fPT 727 Pyr 2254a (Nt) (Sequence 55): *ḫr kꜣ n sḏḥ ḫr sḏḥ n k*A "the bull-serpent is fallen because of the Sedjeh-serpent; the Sedjeh-serpent is fallen because of the bull-serpent".

[74] fPT 727 Pyr 2254c (Nt): *ḫr r=f zꜣ-tꜣ* "thus let the Zata serpent fall".

[75] PT 295 Pyr 438a-b (W) (Sequence 56; Subsequence 107): *stp mꜣfd.t ir nḥb.t in=f-ḏi=f wḥm=s ir nḥb.t ḏsr-<tp>* "let Mafdet pounce upon the neck of the Inifdjif-serpent, and repeat (it) at the neck of the serpent raised of <head>" (or translate "sacred of <head>", as with the meaning attributed to the name by Borghouts 1971, p. 89 n. 148, and Hoffmeier 1985, p. 43); PT 298 Pyr 442c (W) (Sequence 56): *i.šꜥ=f tp=k m ds pn imi ḏr.t mꜣfd.t ḥr<it-ib ḥw.t-ꜥnḫ>* "let him (*sc.* Re) cut off your (serpent's) head with this Des-knife which is in the hand of Mafdet, <resident in the House of Life>".

[76] PT 226 Pyr 226a (W) (Subsequence 210): *ḫr ḥm-psḏ.t m mw* "let the Hem-pesdjet pelican fall into the water"; PT 293 Pyr 435a (W) (Sequence 53): *ḫr ḥm-psḏ.t m ḥꜥp* "and the Hem-pesdjet pelican fall into the Nile".

[77] PT 233 Pyr 237a (W) (Subsequence 210): *ḫr ḏ.t pr.t m tꜣ* "let fall the cobra which rose from the earth"; PT 298 Pyr 442a-b (W) (Sequence 56): *ꜣḫ.t=f tp=f | ir hfꜣw pn pr m tꜣ ḫri ḏbꜥ.w W.* "with his *ꜣḫ.t*-diadem upon him, against this Hefau-serpent, which rose from the earth, which is under the fingers of Wenis".

Along with the expansion of the identification of its member texts, the type's inventory in respect to our knowledge of its catalog of characteristics has also increased, through finding additional points of contact shared between Subsequence 210 and the other recurring series. And that catalog may be expanded a bit more upon comparing the component texts of the other series to one another, because they are further interrelated in content beyond the expressions found only in Subsequence 210. There are vocatives to the god Babay,[78] perhaps not uniformly in a hostile relationship to the deceased, but the theme of the remaining motifs, as before, is the repelling or attacking of foes, as with exhortations to a hostile being that it turn from the beneficiary or reverse its direction, through expressions such as the prepositional *ḥꜣ=k* "back!" and the imperatives *ỉfn* and *ḥmỉ* "turn back!"[79] Threats are evident also with imperatives from the verb *zꜣw* "beware!"[80] And aggressive action or control is evident with the beneficiary's hand or

Turn back"; PT 314 Pyr 504a (W): *ḥꜣ=k* "back"; PT 377 Pyr 662e (T): *ḥmỉ* "fall back"; PT 499 Pyr 1070a (P): *ḥꜣ=k* "back"; PT 500 Pyr 1071b (P): *ḥꜣ=k* "back!"

[80] PT 280 Pyr 421b (W): *zꜣ ṯw* "beware"; PT 294 Pyr 436b (W): *wḏḏ n=f zꜣw ṯw rw pr wḏ n=f zꜣw ṯw rw* "for whom it was commanded 'Beware, O lion!', for whom the command went forth, 'Beware, O lion!'"; PT 499 Pyr 1070b (P): *zꜣw ṯw* "beware"; PT 500 Pyr 1071c (P): *zꜣw ṯw* "beware!"

fingers (*ḏr.t/ḏbꜥ.w*) upon a being,[81] or when a creature is outright attacked by the beneficiary as indicated through the verb *ỉki* "to attack, thrust".[82]

In interim summary, it was observed that a number of the components of Subsequence 210 shared content with other texts in that series, and on those grounds it was supposed that the texts of the series were characteristic of a type. A form of confirmation was obtained through consideration of other recurring series possessing these characteristics, and the supposition was further supported through identifying more intertextual connections among them, placing Subsequence 210 within a larger body of related texts, which body houses a broader spectrum of shared motifs. Accepting all of these texts as a type, I expanded its inventory of textual characteristics from those simply found repeated in Subsequence 210 to include motifs shared among it and all of the recurring series related to it.

A degree of faithfulness to the ancient classificatory sensibility may be assumed, since the typological structure was built up from the starting point of ancient groupings. As a mark of the homogeneous character of the component texts gathered from the groupings, of the fifty-one texts of Subsequence 210 and the recurring series related to it,[83] only four have no distinctive intertextual connections with the others.[84] In short, the

---

[81] PT 297 Pyr 440a (W): *ḏr.t n(i)t W. ỉw.t(i) ḥr=k* "the hand of Wenis is come upon you"; PT 298 Pyr 442a-b (W): *ȝḫ.t=f tp=f | ỉr ḥfȝw pn pr m tȝ ḫrỉ ḏbꜥ.w W.* "with his *ȝḫ.t*-diadem upon him, against this Hefau-serpent, which rose from the earth, which is under the fingers of Wenis".

[83] For the listing of the thirty-three texts of the related series, see above n. 61.

[84] Specifically PT 231, the fragmentary bPT 502D, and bPT 502E-F.

assemblage of motifs cited above may be said to constitute textual characteristics of a type.

But among a type's characteristics is also its performance situation. Toward the beginning of the present chapter, it was shown how the texts of Subsequence 210 can be understood as falling within the personal recitation category, and such is likewise the case with the thirty-three texts in the recurring series related to it. While eight of them situate the beneficiary in the third person,[85] and fifteen make no reference to him at all,[86] seven preserve the first person,[87] with three more showing signs of editing away from the first—in vacillation to the first person[88] and in recarvings.[89] Since nearly a third of the texts indicate an original first person, one has grounds to assume that the practice of editing was simply carried out elsewhere completely. By that assumption, the texts of the recurring series shown to be related to Subsequence 210 may be understood as personal recitations.

2. Further Texts with Matching Characteristics

As thus far the examination of texts has been restricted to those appearing in recurring series, it may be supposed that not all texts appropriate to the type have been identified, because a substantial number of Pyramid Texts are not attested in any recurring series, and at least with texts of a sacerdotal structure it has proven to be the

case that types of texts are not restricted to recurring series. That this holds true for the type currently under consideration is shown through examining texts without regard to their belonging to any series: there are about thirty more texts that may be ascribed to the present type,[90] since they may be seen to possess the motifs and performance situation characteristic of it.

Virtually all of them are addressed to hostile entities, most often specifically serpents,[91] but also other hostile creatures, such as bulls (*ngꜣ, kꜣ wr, i.gꜣ*),[92] as well as the

[100] PT 381 Pyr 669a (T): *šn.n=f ḥw.ti* "having encircled He of the House"; Pyr 669b (T): *šn ḥw.ti in zp3* "He of the House having been encircled by the centipede". Only one text of a different type bears this motif, the ascension text PT 524 Pyr 1236c (P): *šn.n P. w3.wt stš* "Pepi has encircled the ways of Seth".

[101] PT 378 Pyr 666b (T): *z3 T.* "beware of Teti"; PT 380 Pyr 668b (T): *z3w tw wr.wi* "beware the Two Great Ones"; PT 393 Pyr 689d (T): *z3w tw t3* "beware of the earth"; Pyr 689d (T): *z3w tw* "beware"; PT 395 Pyr 691a (T): *z3w tw t3* "beware of the earth"; Pyr 691a (T): *z3w tw* "beware"; Pyr 691b (T): *z3w tw it=k wtt* wsir "beware of your father, whom Osiris begot"; Pyr 691b (T): *z3w tw* "beware"; PT 398 Pyr 693b (T): *z3w tw ḫftiw* "beware the enemies!" Only two texts of different type show this motif: the resurrection text fPT 666A Pyr 1929c (Nt): *z3 tw* "take care"; and the ascension text PT 271 Pyr 391a (W): *z3 tw wḏ n=f* "beware the one who is commanded (*sc.* Horus)"; Pyr 391b (W): *z3 tw ii.n=f* "beware the one who dealt an (eye)-injury (*sc.* Seth)!"

[102] PT 378 Pyr 663b-c (T): *tbw.t ḥr ḫnd.t nḫi | nḫi n*(*i*) *ḥr ḫrd nḫn* "the sandal of Horus is that which treads the Nekhi-serpent, the Nekhi-serpent of Horus the Young Child"; Pyr 664b (T): *ḫnd.n=f ḥr=k* "upon you has he trod"; PT 385 Pyr 673c (T): Sa tp "let head be cut off"; Pyr 673c (T): *ḥ3k sd* "and tail be cut off"; Pyr 675b (T): *sḏm.k3 mrb.t=f imit tp=k* "then his *ax which is in your head will listen"; Pyr 676a (T): *stp* "Leap up"; Pyr 676a (T): *i.nḏr sw* "grasp him"; Pyr 678c (T): *inin.n tw stš* "Seth has cut you up"; PT 388 Pyr 681e (T): *tbb.n ḥr r3=f m tbw=f* "Horus has *shattered his mouth even with his sandal"; PT 397 Pyr 692c (T): *ʿbš sw ʿbš sw* "drown it; drown it!"

[103] PT 279 Pyr 420a (W): *ti ki t3ḥ mr.w* "trample the *mud of the waterways" and Pyr 420b (W): *ti kk.i ti kk.i* "trample the dark one; trample the dark one", although the meaning of these passages is by no means clear.

violently for the beneficiary,[104] sometimes in connection with aggressive action or control by the beneficiary's hand or fingers (*ḏr.t/ꜥ/ḏbꜥ.w*) being upon or against a being.[105] Finally, a pelican is said to fall (*ḫr ḥm-psḏ.t*).[106]

As with Subsequence 210 and the series related to it, the performance situation of the thirty-three additional texts may be understood as personal recitations. While the group is nearly evenly split between texts in the third person[107] and texts making no reference to the beneficiary,[108] one shows evidence of editing in the vacillation to the first person,[109] and another preserves the first person throughout.[110] Based upon the

person of these texts—together with the noted tendency to edit texts away from the first—one may assume that the practice of editing was simply carried out completely in those texts showing the third person.

3. Conclusions Concerning the Type

It was shown that most of the components of Subsequence 210 shared content with other texts in the series, and that they in turn shared content with about thirty component texts of other recurring series. Together with the common performance situation of the texts (as interpreted), this shared content, this broad array of intertextual connections, these motifs—they provide basis for considering them to represent texts of a certain type. Assuming a degree of faithfulness to the ancient classificatory sensibility because of having proceeded in the identification of the type from the starting point of ancient groupings, the rest of the corpus of Pyramid Texts was examined to find about thirty more texts with these characteristics. These texts may be understood in their original forms to have been personal recitations, owing to various indications of editing and some preserved instances of the first person.

Understood as having been recited by the beneficiary himself in their original forms, these texts express vigilance against hostile beings, with their principal concern being the repelling or attacking of the same. In revolving around that general theme, the texts of this chapter constitute one of the most readily recognizable types of Pyramid Texts, and on the basis of that theme they have often been discussed as a unit, most recently by Meuer, whose central point is to argue that the serpents prevalent in these texts are representative of the god Seth.[111] It is noteworthy that Meuer's list of the

[111] See Meuer 2002, pp. 269-315.

members of the type—the most comprehensive of any account to date[112]—conforms closely to those collected together in the present chapter,[113] because the conformity stands as an independent validation of the procedure of identification followed in this chapter and the others.

As most of the texts of this type are addressed to hostile serpents, one could refer to them as "Schlangensprüche", with Meuer, a description that would conform to the title appearing in advance of Subsequence 210 in the Middle Kingdom, but since other beings such as lions and scorpions are involved, that designation is too specific. Instead, while still maintaining contact with the Middle Kingdom title through its use of the word *ḫsf*, this type may be justly called "apotropaic texts". As observed by Borghouts, they are

---

[112] Compare the shorter listing of Borghouts 1999, p. 170, and the comparatively limited number of texts of this kind translated at Leitz 1996, pp. 392-427.

[113] One of the texts called "Schlangensprüche" by Meuer 2002, p. 269, may be understood as other than apotropaic, namely the ascension text PT 332 (see below nn. 206 and 244; in addition to the characteristics listed there, PT 332 is also related to other ascension texts by the motif of the beneficiary awakening and/or turning about (*wꜣḥ/wꜣḥwꜣḥ/wḥ*, *inni*) in statements other than imperatives (for which contrasting motif see above at n. 123); see PT 258 Pyr 310c (W): *W. pi* (*i*)*nn.w* "Wenis is one who turns about"; PT 332 Pyr 541b (T): *pr.n T. m hh=f innii* "Teti has ascended even by his fire, having turned about"; PT 514 Pyr 1175b (P): (*i*)*nni* [*ḫr*] *nḫn.i ḫnti ḫm ꜥnḫ.w=f ir bꜥn.t=f* "let turn about Nekhen [Horu]s, Foremost of Letopolis, whose Ankh-amulets are at his neck (*sc.* the beneficiary)"; PT 684 Pyr 2060 (N): *inn Ne. wꜣḥwꜣḥ Ne*. "let Neferkare turn about; let Neferkare awaken"; Pyr 2061a (N): *irỉ nfr stz kꜣ inn wꜣḥwꜣḥ* "one who pertains to good, who raises the Ka, who turns about, who awakens"; PT 332's transmitted neighbors are exclusively ascension texts at T/S/W, both sacerdotal and ascension texts at M/S/W, and purely sacerdotal at N/S/W and in the subsequent attestations of the text in the Middle Kingdom, at B9C/L and B10C/L, within Sequence 148). In addition to the other texts listed by Meuer, PT 501, bPT 502A-B, D-F, H, and PT 549 may be counted as examples of the apotropaic type, on account of their associations noted above in the course of this chapter's presentation.

primarily defensive in nature[114] because their intent is preventative,[115] and are "usually regarded as 'magical texts' by convention".[116]

C. APOTROPAIC TEXTS

1. ORIGINAL AND TRANSFORMED SETTINGS

Texts of sacerdotal structure, it was argued, had mortuary service as their original context: they were recitations uttered by priests during ritual performances for the dead. In being inscribed for tomb use, their function necessarily changed; in the sealed tomb, they were no longer ritual scripts for texts to be recited by priests, but rather were representations of that ritual. Importantly, even though their function changed upon transferral to the tomb, there is little in the way of modifications for their new environment,[117] but several traits superficially maintaining their dependence upon an officiant engaged with reading and reciting them. There are, first of all, textual marks such as *ḏd mdw zp 4* "recite four times" appearing in both resurrection and offering ritual texts.[118] The proper function of such marks is dependent upon a reader's interaction with

---

[114] Similarly Ogdon 1989, p. 59.

[115] Similarly Leitz 1996, p. 385.

[116] See Borghouts 1999, pp. 151-152 and 154, where he contrasts between texts that seek to adapt the deceased to a new mode of existence, assuming new identities, and passing through different regions ("productive magic") as opposed to those that seek to prevent things from happening to him ("defensive magic").

[117] In presumed replacement of original split-column writing for PT 215, and the presumed replacement of *zp 2* and *ṯz pḥr* in other cases; on these, see Grimm 1986, pp. 100-102. However, the latter two phrases do appear in texts of the sacerdotal category, with *zp 2* "twice" in the offering ritual text PT 84 Pyr 59a (W): *ḥtp-ni-sw.t zp 2* "the offering of the king, twice"; with *ṯz pḥr* in the resurrection text PT 215 Pyr 143b (W): *n ỉỉ pn n. nkn pn ṯz pḥr* "the Iy-injury of this one is not; the Neken-injury of that one not, and vice versa".

[118] See Grimm 1986, p. 102. There are dozens of examples of this kind.

the text: *ḏd mdw zp 4* is not a representation of the voice; rather, it is an instruction to the reader that he is to repeat a section of the text. Also not a representation of orality are the item and action specifications of offering lists: the words designating the items were not to be pronounced; they are visual notes indicating objects that are to be physically manipulated. For them to fulfill their purpose, a reader knowledgable of the rites is to read them and carry out what they indicate; although in the sealed tomb no priest would be available, the editors left the notations, in their new environment now simply representing the indicated items and actions. And above all, the first person officiant in texts of sacerdotal structure was rarely changed, and then only by mistake.[119] In their inscribed forms, then, the texts maintained their identity as a kind of script requiring a reader's involvement. Phrased another way, despite the transferral of setting, resurrection and offering ritual texts were not modified so as to become more suited to their new environment.

The situation is different for texts originally of the personal structure: by editing the grammatical person of the beneficiary away from the first person, the manner in which the texts was to be performed has been overtly altered. And in that alteration, one has an explicit acknowledgment of the transferral of setting. Because the modifications occurred even on the tomb wall, it follows that the texts as originally written were, in the Old Kingdom, not deemed suitable for that environment. The editing made them suitable for it.

If instead one supposes that texts of an originally personal structure had in fact been composed specifically for the use of the deceased in the tomb, then they would

---

[119] See above n. 23.

properly belong to that category of texts that Barta calls "Grabinventar".[120] But for the Pyramid Texts, that sort of account is inadequate to answer the following question: why, then, were these texts changed wholesale once it came time to put them in the tomb and thereby achieve their intended purpose? On the contrary, the modifications explicitly show what can only be inferred for texts of a sacerdotal structure: texts of a personal structure were adapted for the tomb.

In other words, the change in performance structure shows that the original setting of such texts was not the tomb. And indeed an extra-tomb setting is held for apotropaic texts by Meuer, in seeing possible allusions to field hands at agricultural work, to stone workers, and to encounters with serpents in walking through the desert;[121] these circumstances are resonant of what one envisions for the context of use of New Kingdom "magical" texts against serpents and scorpions,[122] and what is indeed explicitly stated in the title of a non-mortuary apotropaic text from the First Intermediate Period.[123] But, while Meuer's interpretation is welcome in tacitly supporting the present argument—for it directly asserts that the texts were originally performed by the living—he goes astray in afterwards insisting that they were not ritual texts, since they "wirken als Aussprüche an sich und sind nicht auf den Vollzug eines Rituals angewiesen" and, besides, they were

---

[120] See Barta 1981, p. 69, and the following note.

[121] See Meuer 2002, pp. 270 n. 1 and 278-279. A similar view for Pyramid Texts "directed against snakes and scorpions, may have been used in life on earth as well as in life beyond by kings and private persons alike" is held by Nordh 1996, p. 172.

[122] As held by Borghouts 1999, p. 164 with n. 62, in consideration of Deir el Medina workers' absences on account of scorpion bites.

[123] See Pap. Tur Hier 54003 (Roccati 1970) R 9: *r³ n(i) h³.t r n³ii.wt ḥ³=k ḥf³w imi i³.t=f sptḥ.w imi-n³ii.t=f* "Utterance of descending to a thicket. Back, O Hefau-serpent who is in his mound, O stretched-out serpent who is in his thicket!" The text was to be recited upon entering the sort of environment where a serpent might be.

"aus dem alltäglichen Leben übertragen, wo sie in Anwesenheit einer Schlange laut gesprochen wurden".[124] Such a viewpoint begs the question as to just what a ritual is, if not a repeated, formulaic act—even if only a speech act. On the contrary, because the recitations are fixed utterances rather than extemporaneous speeches, they are properly understood as ritual recitations.[125]

Although one may be justified in seeing these texts as first composed for individual use—perhaps for manual laborers and later inscribed for kings—to insist that they are incompatible with a group ritual setting is not possible, since after the Old Kingdom utterances against serpents are found in just such a setting. Boards inscribed with apotropaic texts and found under a coffin after the Old Kingdom[126] were no doubt employed in introducing it into the tomb, and thus made use of by pallbearers in the formal deposition of the embalmed and equipped corpse. Much later, apotropaic utterances against serpents evidently initiate a section of rites performed for the god Amun-Re upon his arrival at the small temple of Medinet Habu,[127] and still later an entire complex of temple rites revolves around the execration of the serpent 'Aapep, with some

---

[124] Meuer 2002, p. 270 n. 1.

[125] Compare Mauss and Hubert 1972, p. 57.

[126] With their date no earlier than the First Intermediate Period; see Osing 1987, pp. 205-210; two of the utterances are paralleled by passages of apotropaic Coffin Texts (CT 885 VII 97p-s and CT 930 VII 131b-e).

[127] See Parker et al. 1979, pp. 52-53 and pl. 22.2 "Be driven away(?), back, he who enters(?)! Mayest thou fall at the place of thy head, and vice-versa!" and pl. 22.9-10 "He comes out [before him(?) as ... Wepwawet] so that human beings see [him(?)] and the *bṯw*-serpent is driven away(?)".

of the same phraseology from these Pyramid Texts.[128] In light of later evidence, group use in addition to individual[129] use remains within the realm of possibility.

The latter two temple ritual contexts also imply a significance beyond the physical; they are to ward off malevolent forces as incorporeal as gods. An incorporeal component is clearly evident in apotropaic texts found in the New Kingdom manifestation of the mortuary literature, the Book of the Dead. There one finds, for example, *rꜣ n(i) ḫsf mzḥ ii r it.t ḥkꜣ.w n(i) N. | m-ꜥ=f* "utterance of stopping a crocodile which comes in order to take away the magic of N. from him".[130] The reality of the situation in which such a text might be used is signalled by the nature of the threat: it is not the beneficiary's life that is in danger from the jaws of the crocodile, but the loss of an intangible. The distance of the situation from the physical world is signalled also by the circumstances in which such a text might be employed, since another Book of the Dead utterance against crocodiles is specified for use *m ḫrit-nṯr* "in the necropolis",[131] a desert locale inhospitable to an amphibian.

Ogdon, in pursuing the "vocalic quality" that he supposes apotropaic texts to have had, awards appropriate emphasis to their spoken dimension.[132] To refine and extend his

---

[128] As at Pap. Bremner-Rhind (Faulkner 1933) 23, 1-2: *tp=k mwt ꜥꜣpp | ḫt ḥm ḫft(i) n(i) rꜥ ḫr zbn ḥm ḥꜣ=k* "may you taste death, O 'Aapep! Turn back! Depart, O enemy of Re! Fall down! Slither away! Depart! Back!"

[129] For the later prophylactic significance of apotropaic texts to individuals, of special significance is the incorporation of a derivation of PT 289 among the texts inscribed on the socle of a Late Period "statue guérisseuse", for which see Klasens 1952, pp. 5, 63, and 111-112.

[130] BD 31 (Pc) 1-2.

[131] BD 32 (Ba) 1.

[132] See Ogdon 1989, pp. 59-62.

point, it may be more precisely said that their efficacy was by voice, prior to their inscription in tombs. Their vocalic quality is clear not only by the ubiquitous mark *ḏd-mdw* "recitation" at the beginnings of these texts[133] and by the much more specific *ḏd-mdw zp 2* "recite twice" in that position,[134] but also by statements such as *hpnw ḏd(=i) nn r=k* "O Hepnu-serpent, against you do I say this"[135] and *ḥꜣ=k imn imn ṯw | im=k iw r bw nt(i) T. im | im=f ḏd rn=k pw r=k nỉ nm zꜣ nm.t* "back, Imen-serpent! Be hidden, and do not come to the place where Teti is, lest he say this your name of 'Traveller son of Traveller' against you!"[136] Both statements bear witness to their originally recitative as opposed to inscribed character: the procedure of uttering the words is to produce the effect;[137] the speech act is potent as such.[138] That is the principle evidenced by a ritual instruction appended to two Coffin Texts against serpents: *ḏd z(i) rꜣ pn ḥr=f | tm rḏi wnm sw {ḏi} ḥfꜣ.wt pw m ḫrit-nṯr | wnm=f ḥfꜣ.wt nb.t pw* "let a man speak this utterance over himself; it means that serpents will not be permitted to eat him in the necropolis and that he eats all the serpents".[139]

---

[133] As noted by Eyre 2002, p. 26: the "recitational style of ritual texts is generally explicit in their formulaic heading: *ḏd mdw*".

[134] At PT 391 Pyr 687a (T) and PT 395 Pyr 691a (T).

[135] PT 227 Pyr 227b (W).

[136] PT 293 Pyr 434c-e (T).

[137] Compare Austin 1962, p. 26. Post-structuralistically, one may add the dimension of the group's acceptance of an utterance as efficacious as a prerequisite of its efficacy, as concluding in the critique of Bourdieu 1991, p. 116, of Austin 1962.

[138] Compare Eyre 2002, p. 28.

[139] CT 370 V 33a-c (B2L); similarly CT 372 V 34d-f (B1C).

From their explicit dependence upon vocal performance and from the alteration of the person of the beneficiary, it is clear that apotropaic texts were brought over from another setting in life—whatever precisely that might have been—and converted for use in the tomb. In that new setting, their function must inhere purely in their inscriptional state; their efficacy was direct, even while the texts ostensibly retained a vocalic dimension.

2. APOTROPAIC TEXTS AS A TRADITION

As noted above, three component texts of Subsequence 210 are found combined with different texts in three different recurring series in the Old Kingdom: Sequence 135, Sequence 97, and the latter's Subseqence 140. It was also observed that no shorter segments of it are attested in the Old Kingdom, although they are attested afterwards. These circumstances are different from what was observed for the offering ritual Sequence 23 and the resurrection Sequence 84. The texts of Sequence 23 were found combined with different texts in ten different recurring series, and there are fifteen subsequences of it attested on Old Kingdom sources. The texts of Sequence 84 were found recombined into six different recurrings series, with ten Old Kingdom subsequences of it. The lesser frequency of rearrangement and recombination of the component texts of Subsequence 210 into different series shows less editorial engagement with the type.

A similar circumstance would appear to pertain in the Middle Kingdom, when several identically ordered segments of Subsequence 210's component texts recur,[140] but

[140] Subsequence 211 consisting of PT226-241on L1NY/L; Subsequence 212 consisting of PT226-240 on Sq1C/B and Sq2C/B; Subsequence 213 consisting of PT226-230 on M7C/B; Subsequence 215 consisting of PT226-228 on L-MH1A/B, and later in Teperet and Pediniese; Subsequence 216 consisting of PT226-227 on Q1Q/S/E; Subsequence 219 consisting of PT229-240 on Q1Q/S/E; and Subsequence 221 consisting of PT230-238 on L-PW1A/B.

only one recombination exists.[141] The comparatively lesser degree of flexibility in the transmission of series of apotropaic texts is suggestive of a less vibrant tradition for these texts in both periods, adding to the impression of greater age for them than for the rest of the corpus:[142] one sees that the texts of this type had been fixed into groups of virtually canonical order, with that canonicity imposing the restraint of tradition. So also for their content. While dozens of apotropaic texts from the pyramids are transmitted on Middle Kingdom sources,[143] there are no variants of the sort noted for offering ritual and resurrection texts: the structure and content of the Old Kingdom apotropaic texts were not subject to modification in the way that offering ritual and resurrection texts were.

Nevertheless, this is not to say that the type itself was stultified into immobility in the Middle Kingdom—far from it. As may already have been assumed by reference to the instruction to CT 370 and to the utterances inscribed on coffin support boards noted above, in the Middle Kingdom several new texts of the apotropaic type are attested and were presumably composed at that time. In their possessing motifs characteristic of Old Kingdom apotropaic texts,[144] they display a continued involvement with the ancient notions. One will serve as illustration:

CT 381 V 44a-d (B1L)

---

[141] Subsequence 85 consisting of PT226 PT228 on T3Be/B and CJ 50246, the latter being a Late Period source; the "parent" of Subsequence 85 is Sequence 44 consisting of PT226 PT228-229 in Nesuqedu and Sq B, both of them Late sources.

[142] As held by Mathieu 2004, p. 253; Altenmüller 1984, col. 20; and Schott 1964, p. 84. In contrast, Leitz 1996, p. 385, feels that a contemporaneous dating is possible.

[143] PT 226-243, 276-299, 314, and 379.

[144] In addition to CT 381 cited below, see CT 209, 342, 369, 377-380, 418, 424, 435-436, 586, 717, and 885.

V 44a *ḥ3=k t3š sn ˁnḫ m smˁ*
V 44b *z3w ṯw i.3q*
V 44d *ḏd z(i) r3 pn ḫft rrk | ḥsf=f pw*

V 44a Back, O you whom the brother of the Living One bounded with a sounding-pole!
V 44b Beware, O climbing-serpent!
V 44d-e Let a man recite this utterance against a Rerek-serpent; it is the case that it is stopped.

The text makes use of an exhortation to turn back (*ḥ3=k*) and a warning to beware (*z3w ṯw*), but the names of the beings addressed are not found in Pyramid Texts; it is a new text formed according to the Old Kingdom type. So also for the texts alongside which these are transmitted, except for one. CT 381 is always attested in Sequence 282, consisting of CT 379-382,[145] all of which but the last contain motifs found in apotropaic Pyramid Texts. The exception of that series is worth considering.

CT 382 V 44f-i (B1C)

V 44f *iw it=i (m) b33.w*
V 44g *mw.t=i pw ppw.w*
V 44h-i *ḥsf rrk m ḫrit-nṯr | ḥsf=f pw*

V 44f My father is Baau;
V 44g my mother is Pepuu.
V 44h-i Stopping a Rerek-serpent in the necropolis; it is the case that it is stopped.

As CT 382's statements of paternity are not found as a motif among Pyramid Texts,[146] while it is nevertheless transmitted alongside texts formed according to the Old

[145] On B1C/B, B1L/F, and B3L/F.

[146] See, however, the ascension texts PT 307 Pyr 482c (W): *it n(i) W. iwnw mw.t n(i)t W. iwnw(.it)* "the father of Wenis is a Heliopolitan, and the mother of Wenis is a Heliopolitan,"; PT 576 Pyr 1507b (P): *it n(i) P. iwnw.i mw.t n(i)t P. iwnw.(i)t=k* "for the father of Pepi is a Heliopolitan, for the mother of Pepi is your Heliopolitan".

Kingdom type, and is overtly linked to CT 381 by its title and notation of benefit, CT 382 shows that apotropaic texts were undergoing development in the Middle Kingdom. Thus, the ideas expressed in the older motifs were being maintained in the verbatim transmission of Pyramid Texts in the Middle Kingdom and in the production of new texts according to the type's characteristics, but the type's scope was being extended through the creation of related texts consisting of different motifs.[147]

D. SUMMARY

Apotropaic texts are characterized by a personal performance structure and a set of distinctive motifs, particularly the expression of vigilance against hostile beings and their being warded away and attacked. Unlike texts of sacerdotal structure, where a transfer in setting from the world of the living to the tomb is implicit, in these texts that transfer is explicit in modification to the person of the beneficiary. Prior to their being inscribed, they might have found individual use in daily life situations, but, based on later evidence, a setting in group ritual cannot be ruled out. In either situation, their efficacy was vocalic, superficially retained upon their conversion for inscription within the tomb. While there was a lesser degree of flexibility in the transmission of series of apotropaic Pyramid Texts in the Middle Kingdom, new texts continued to be produced according to the more ancient characteristics, alongside entirely new but related texts.

---

[147] Besides the Coffin Texts of the Pyramid Text type identified above at n. 144, see Meuer 2002, p. 270; and Borghouts 1999, p. 156-157 with n. 13, for reference to additional apotropaic Coffin Texts, and for the observation that apotropaic texts in the Middle Kingdom become more diverse. Add to their citations CT 930 VII 130g-131r, in light of its parallel to the texts of the coffin support boards noted above at n. 126.

CHAPTER FIVE

ASCENSION TEXTS

A. SEQUENCE 57

In the apotropaic text PT 314, a hostile creature is addressed. As there is no reference to the beneficiary, one presumes that it is he who is to recite the text.

504b *i.ḫr zbn*

504a Recitation.
504a Back, O broken long-horned bull (*sc.* Seth[1]), at whose horns are the fingers of Aker!
504b Fall down! Slither away!

Understanding PT 314 as having the personal performance structure places it in line with the texts transmitted alongside it in all three of its attestations. In two of these, it

[1] *ng3* is written with a bull determinative; for the transliteration, see Wb ii 349. The play on words, *ng3* "long-horned bull" and *ng3* "to break", together reveal the identity of the bull, via PT 580 Pyr 1544c (P): *ng3.n(=i) n=k ng3 ṯw m ng3* "as a long-horned bull have I (*sc.* Horus) broken for you (*sc.* Osiris) the one who broke you (*sc.* Seth)", observed by Otto 1950, p. 169.

is a component of Sequence 57, consisting of PT 302-321,[2] and in the other it is a part of a segment of that sequence, Subsequence 110, consisting of PT 306-321.[3] While fourteen texts of Sequence 57 refer to the beneficiary in the third person,[4] four show signs of editing away from the first—a residual trace of the first person in double reed-leaves,[5] disagreement in person among exemplars,[6] the agrammatical advancement of a noun,[7] and recarving[8]—and still another text actually maintains the first person.[9] Since one

---

[2] Appearing at W/A/N—C/W-E and S/S/N + C/W-E; in both cases, it is a matter of PT 302-312 on a north wall and PT 313-321 on corridor walls. The sequential relationship between PT 302-312 and 313-321 in W and S varies somewhat in the secondary literature; see J. P. Allen 1994, 19, for PT 302-312, 313-317, and 318-321 to be read in that order; see similarly Osing 1986, pp. 133, and 140-142, for PT 302-312 before 313-321, but held to be thematically distinguishable from it; and see contrastively Altenmüller 1972, pp. 34 and 37, for PT 260-276 (at W/A/W-S-Eg and S/S/S-E) placed immediately before PT 313-321. The alleged thematic distinction between PT 302-312 and PT 313-321 is disproven by several motifs held in common between the texts of the two segments; see below nn. 22 (on PT 302, 306, 321); 25 (on PT 302 and 320); 29 (on PT 311 and 315); 30 (on PT 308 and 317); and 32-33 (on PT 310 and 321). Concerning the interpretation of Altenmüller 1972, the disposition of PT 373 in S shows that its corridor texts are to be read *after* PT 302-312 and *before* the texts of its northeast corner: in that tomb the first part of the text in question is the last of its corridor texts, beginning at S/C/E (Hayes 1937, pl. 12, lines 534-536), finishing immediately after PT 312 at S/S/N (Hayes 1937, pl. 5, lines 334-335); while for W, it is more complicated to read PT 260-276 of W/A/W-S-Eg after the texts of W/A/N, because PT 247-258 separate these texts on W/A/W. The architectural juxtaposition of W/A/N to W/C/W-E lets PT 302-312 and 313-321 most simply be read together. As observed by J. P. Allen 1994, p. 19, their sequential relationship is further supported by architectural juxtaposition in L-JMH1, since PT 306-312 occupies L-JMH1/S/N and PT 313-321 occupies L-JMH1/S/W (see the following note). It is worth noting that only part of the series PT 260-276 appears in L-JMH1, and then immediately *after* PT 321, as part of Subsequence 93 (PT254-258 PT260-263 PT267).

[3] Subsequence 110, appearing on L-JMH1/S/N-W.

[4] PT 303-310, 313, and 315-320.

[5] PT 302 Pyr 461a.

[6] PT 306; on the exemplar disagreement of this text, see above at n. 57.

[7] PT 321 Pyr 517a.

[8] PT 311 Pyr 495c.

[9] PT 312 Pyr 501.

quarter of the sequence's texts indicate an original first person, one has reason to assume that the practice of editing was simply carried out completely with those texts attested exclusively in the third. In their original forms, the texts of Sequence 57 may be understood as having originally had the personal structure along with PT 314.

As to its content, PT 314's relationship with texts of the apotropaic type is clear: the exhortation to turn back (*ḥ3=k*),[10] the vocative to a hostile bull (*ng3*),[11] and the commands that it fall down and slither away (*i.ḫr zbn*) are all common to that type.[12] But as clear as its membership in the apotropaic type is, none of its motifs is found in the other texts of Sequence 57,[13] nor do these others exhibit any of the motifs characteristic of the apotropaic type.

On the contrary, most of them share content of a quite different nature. The sequence's first text can serve as a starting-point for consideration of what is in common to them:

PT 302 Pyr 458-463 (W)

458a *sbš p.t ꜥnḫ spd*(*.t*)
458a *n W. ỉs ꜥnḫ z3 spd.t*

---

[10] See Chapter Four, n. 79 above.

[11] See Chapter Four, n. 92 above.

[12] See Chapter Four, n. 96 above. In addition to these three motifs, PT 314 shares a motif of fingers being at a bull's horns (*ḏbꜥ.w m wp.t=f*) with the apotropaic text PT 538 Pyr 1302a-c (P): *ḥ3=k <n>g3{n} ỉ.g3 | ... | ḏbꜥ.w tm m wp.t=k* "back, O *staring long-horned bull (*sc.* Seth)! ... with the fingers of Atum at your horns!"

[13] While PT 314 Pyr 504a contains a vocative to a bull, that bull is clearly hostile, owing to an exhortation that it turn back and to its identity as Seth; see n. 1 above. Another component text of Sequence 57 does also contain a vocative to a bull, but that bull is clearly benevolent; see PT 304 Pyr 470a-c (W): *ỉ.*(*n*)*ḏ-ḫr=k ng3 rꜥ ḫr*(*ỉ*) *fd ꜥb | ... | [qꜥḥ ꜥb=k] pw ỉmn.t n W. sw3 W.* "hail to you, O long-horned bull, O Re who has four horns...! [Lower] this western [horn of yours] to Wenis, that Wenis pass".

458a The sky is clear,[14] and Sothis lives,
458a and Wenis is the Living One, the son of Sothis,
458b-c the Two Enneads have performed priestly service for him, as the Plough, the Imperishable Star(s);
458d the house of Wenis will not perish in the sky; the throne of Wenis will not be destroyed on earth.
459a Let men thus hide and gods thus fly,
459b for Sothis has made Wenis fly up to the sky among his brothers the gods,
459c for Nut the Great One has revealed her arms to Wenis,
460a-b the two Bas foremost of the Bas of Heliopolis[15] having bowed before Re,
460b having passed the night making these lamentations of the god:
460c 'The throne of Wenis is yours, O Re;
460c he will not give it to any other!

---

[14] Following Sethe 1935b, p. 254 in interpreting the sense of *sbš*. The verb appears also in the same motif in the resurrection text PT 667A Pyr 1948e: *sbš n=k p.t* "the sky being clear for you".

[15] For *ḫnti bꜣ.w ỉwnw*, see also PT 539 Pyr 1305a: *ỉr.tỉ M. <m> wr.t ḫntit bꜣ.w ỉwnw* "the eyes of Meryre are <as> the Great One, Foremost of the Bas of Heliopolis"; and PT 606 Pyr 1689c: *i.n psḏ.ti wr.t(i) ꜥꜣ.t(i) ḫnt(i)t bꜣ.w ỉwnw* "—say the Great and Magnificent Enneads which are before the Bas of Heliopolis".

461a Thus let Wenis ascend to the sky, to you, O Re!'
461b The face of Wenis is that of falcons;
461c the wings of Wenis are those of birds;
461d his nails are those of Wekhau of Djuftit.
462a And there is no issue with (lit. word of) Wenis in the land with men;
462b there is no condemnation of him in the sky with the gods,
462c for Wenis drove out the words against him, what Wenis destroyed in order to rise up to the sky.
463a Wepwawet has made Wenis fly up to the sky even among his brothers the gods;
463b Wenis has taken (his) wings (lit. arms[16]) as a goose:
463c Wenis has beaten (his) wings as a kite.
463d The one who would fly up is flown up, O men;
463d Wenis is thus flown away from you.

PT 302 begins by setting the stage,[17] as it were, in speaking of the sky's being clear; that notion is matched in another text of the sequence through a series of imperatives to the sun god toward the end of the text.[18] With the skies cleared, figures other than the beneficiary are found flying (*pꜣi*) at the beginning and end of this text[19] and in two others.[20] The beneficiary himself ascends to the sky (*pri r p.t*)[21] here and in

---

[16] For *ꜥ.wi* "arms" referring to the wings of a bird, see CT 474 VI 17l (B1Bo): *ir.n=f ꜥ.wy pꜣii r=tn* "he has made the hands of one who would fly away from you".

[17] On the grammatical structure of stage-setting statements, see J. P. Allen 1984, §304 (called "'dramatic' passages); or, alternatively, Schenkel 1978, p. 115 (called "einleitende Situationsschilderungen"); on such statements appearing at the beginning of a text or a section of a text, being typically built out of motifs involving the actions or conditions of the earth and sky, thus indicating a "(kosmischer) Zustand", see Assmann 2002, p. 94.

[18] PT 311 Pyr 500b (W): *nfꜥ n=k šꜣp.t ḫsr n=k i.gp i.sḏ n=k šni.wt* "remove the storm; drive out the clouds; break up the storms!"

[19] PT 302 Pyr 459a and 463d.

[20] PT 310 Pyr 494b (W): *in n W. i.pꜣ=s ḫnn=s* "bring to Wenis 'It-flies-it-alights (the name of a ferryboat)'"; PT 312 Pyr 501 (W): *pꜣ t pꜣ ꜣ t r ḫw.wt=i ḫw.wt n.t* "let the bread fly! Ah, let fly the bread to my two houses, to the Houses of Neith!"

[21] On *pri* in the sense of "to ascend," see Assmann 1977a, col. 1207.

two other texts.[22] Two additional points of contact between PT 302 and the other texts of Sequence 57 are the texts' audience, at turns being the sun god (*rˁ*)[23] and humans (*rmṯ*, *rḫi.t*)[24] in PT 302; a vocative to the latter occurs in one other text,[25] while vocatives to the sun god occur in three more, as with *mȝȝ rˁ W. siȝ rˁ W.* "see Wenis, O Re; perceive Wenis, O Re".[26] In all, PT 302 is related in content to nine other texts of Sequence 57.

Outside of PT 302, there are additional connections among the texts of this series, developing the beneficiary's position, attributes, actions, and identity, as well as the theme of ascending, which itself may be more generally understood as passage or transition. He is said to sit (*ḥmsi*) with divine beings;[27] he is not to be opposed by others,

---

[22] PT 321 Pyr 517b (W): *pr W. ḥr=s r p.t* "that Wenis ascend upon it to the sky"; PT 306 Pyr 476b (W): *pr.t r=f nṯr pn ir p.t pr=k r=k W. ir p.t* "that this god ascends thus to the sky, that Wenis ascends thus to the sky" and Pyr 479a (W): *pr=k r=k W. ir p.t* "may you ascend, O Wenis, to the sky".

[23] PT 302 Pyr 460c and 461a.

[24] PT 302 Pyr 463d (W). See Pavlova 1999, pp. 93 and 103, for the contrastive opposition of *rḫi.t*, in its "neutral sense", to gods in the Pyramid Texts.

[25] PT 320 Pyr 516a (W): *imn ṯn rḫ.t tp-ˁ(.wi) W.* "be hidden, O masses, before Wenis".

[26] PT 311 Pyr 495a (W). The other two instances of vocatives to Re occur at PT 304 Pyr 470a (W): *i.(n)ḏ-ḥr=k ngȝ rˁ ḫr(i) fd ˁb* "hail to you, O long-horned bull, O Re who has four horns"; and PT 307 Pyr 482b (W): *rˁ* "O Re".

[27] PT 316 Pyr 506b (W): *ḥms W. sȝ=f ir ḏsr.t m iwnw* "while Wenis sits with his back to the sacred one in Heliopolis", where *ḏsr.t* is presumed to be an epithet of *psḏ.t* "Ennead" by Sethe 1935b, p. 353, followed by Hoffmeier 1985, p. 55; PT 315 Pyr 505c (W): *ḥms=f m-m=ṯn ḥˁȝ.tiw* "with him sitting among you, O H'aati-baboons".

in the sense of an arm not being placed or crossed (*wḏi/ḏ3i* ꜥ) against him.[28] The beneficiary acts as priest in performing the Henu-gesture (*ḥni/ḥnn*), as with *ỉr W. ḥni ḥn.t*(*i*)*t* "with Wenis making Henu-gesture and that which pertains to it".[29] He is identified as a god, specifically as Sobek (*sbk*).[30] The identity as Sobek may be owed to the crocodile's governing waterways[31] that must be crossed, since Sequence 57 also includes texts sharing ferryman motifs, with vocatives to the ferryman such as *ḥr=f-m-ḫnt=f ḥr=f-m-mḥ3=f* "O Herefemkhenetef, O Herefemmehaf",[32] and references to a ferryboat (typically *mḫn.t* "ferryboat" or simply *nw* "this") being brought (*ỉnỉ*), as with

---

[28] PT 311 Pyr 498b (W): *ỉm*(*i*)*=sn ḏ3 ꜥ=sn* "let them (*sc.* the four who roar; PT 311 Pyr 497b *4 ỉpw kh3.w*, the "Daemonen des Windes", according to Meuer 2002, p. 20; "Art Wesen am Himmel", according to Wb v 137.1) not cross their arms (*sc.* against the beneficiary)"; PT 307 Pyr 484a-d (W): *nṯr nb wd.t*(*i*)*=f*(*i*) *ꜥ=f | ... | n t=f* "as for any god who would put his arm (*sc.* against the beneficiary), ... his bread is not". On such threat formulations, see Meuer 2002, pp. 16-18. Bodily opposition occurs in other texts of the type currently being investigated, with *ṯw3 ꜥ* "hindrance of the arm" and *ḏ3i* plus reflexive pronoun "to cross the self (against)", encountered again below at nn. 73 and 199. *ḏ3i*'s association with opposition is evident in participles built from the verb *mḏ3i*, itself evidently derived from *ḏ3i*, as at PT 524 Pyr 1237b: *n mḏ3.w ḏ3 sw m w3.t P. pn* "there is no adversary who would cross himself in the way of Pepi"; and PT 683 Pyr 2048c-d: *ḫpr mỉỉ r mḏ3 | z3.t rꜥ ḥr*(*i*)*t mn.tỉ=fỉ* "the like will come to be against the adversary, the daughter of Re who is upon his lap (i.e. the violent uraeus)". Borghouts 1999, p. 154, also identifies *ḏ3i* as an indication of a hostile force.

[29] PT 315 Pyr 505c (W). The motif appears again with a geminated form from the third-weak *ḥni* at PT 311 Pyr 500c (W): *ỉr n=k W. ḥnn ḥnn* "let Wenis make Henu-gesture and again for you". On the Henu-gesture, see Assmann 2002, pp. 14-15; Dominicus 1994, pp. 61-65 (note however that she confuses *ỉ.kỉỉ* "to cry out" of PT 337 Pyr 550b with *ỉkỉ* "to attack" at PT 477 Pyr 959a and PT 283 Pyr 424a); Lapp 1986b, pp. 155-162; Junker 1940, pp. 25-28. On the beneficiary taking the role of a priest in the Pyramid Texts, see Hays 2002, pp. 164-166.

[30] PT 317 Pyr 507b (W): *W. pỉ sbk w3ḏ šw.t rs ḥr ṯz ḥ3.t* "Wenis is Sobek, green of plumage, vigilant of sight, who raises the brow" (for *ṯz ḥ3.t*, see PT 328 Pyr 537a and PT 329 Pyr 538a); Pyr 510a (W): *ḫꜥ W. m sbk z3 n.t* "let Wenis appear as Sobek, son of Neith"; PT 308 Pyr 489c (W): *m3n n=ṯn W. mr m33 sbk n n*(*.t*) "that Wenis may look upon you just as Sobek looks upon Neith".

[31] See, for example, CT 268 IV 4g (T1L): *mzḥ nb ḥꜥp.w* "the crocodile, lord of the Nile"; CT 268 IV 1a: *nb mr-nḫ3*(*i*) "Sobek, lord of the Shifting Waterway"; and CT 268 IV 5e (B1Bo): *sbk ... nb ḥzp.w* "Sobek, lord of gardens".

[32] PT 310 Pyr 493b (W), with a vocative to the ferryman also at PT 321 Pyr 517a (W): *ḥ3=f-m-ḥ3=f* "O Hafemhaf". On the names of the ferryman, see Bickel 2004, p. 92 with further references there at n. 5, and add to them Depuydt 1992, pp. 33-38; and Bonnet 1971, pp. 333-334.

in.t(*i*) *n=k W. zii mḫn.t* "which ferryboat should be brought to you, O Wenis?"[33] in a quoted interrogative. The motif of bringing a ferryboat signals a desire to cross a body of water; it involves a transition or passage by motion. In this sense, the motif is akin to the motifs of ascending to the sky and rising, as they also deal with transition or passage.[34] In the same vein is the last motif common to the texts of Sequence 57, setting up a ladder (*m3q.t*), as in *tz m3q.t in. rˁ ḥft wsir | tz m3q.t in. ḥr ḥft it=f wsir* "the ladder is built by Re before Osiris: the ladder is built by Horus before his father Osiris".[35]

Altogether, fourteen texts of Sequence 57 are related to their fellows through one or more intertextual connections,[36] while none of the texts in the series shares motifs with PT 314: this apotropaic text is transmitted among texts distinguishable from it by their

---

[33] PT 310 Pyr 494a (W), with the same line including the demand *in nw n W.* "bring this to Wenis", and the text later saying Pyr 494b (W): *in n W. i.p3=s ḫnn=s* "bring to Wenis 'it-flies-it-alights (a ferryboat)'". The motif occurs also at PT 321 Pyr 517a (W): *in n W. sfr.t ḥtp.t ḥr*(*i*)*t psḏ.w wsir* "bring to Wenis the Seferet-Hetepet (a ferryboat) which is on the back of Osiris".

[34] The affinity of waterborne to airborne passage is noted by Bickel 2004, pp. 91-92 and 108. Assmann 1977a, col. 1206, believes that "die Entrückung der Menschen aus der Welt der Lebenden vorwiegend in Formen der Horizontalität begriffen wird" while the "offizielle Dogma des Königstodes" expressed the royal forms of transport "im Zeichen der Vertikalität"; the opposition is erroneous, since both forms of transport are attested in the Pyramid Texts and thus are equally applicable to a king. Piankoff 1974, p. 6, observes that both the transport of the corpse across a body of water is found equally for both the king and his officials in the Old Kingdom. Nordh 1996, p. 171, cites several Old Kingdom texts clearly showing that non-royal individuals aspired to a celestial afterlife by means of ascent.

[35] PT 305 Pyr 472a-b (W). In the other text with this motif, *wtz.w* "supports" is intelligible in relation to the ladder given the statement's context, at PT 306 Pyr 478b-479a (W): *ir=sn wtz.w n W. ḥrˁ.wi=sn | pr=k r=k W. ir. p.t i.3q<=k> ḥr=s m rn=s pw n*(*i*) *m3q.t* "them making supports for Wenis before them. May you ascend, O Wenis, to the sky, climbing up it in this its name of 'ladder'". Additionally, PT 304 in the Middle Kingdom source T3Be receives the title: *r3 n*(*i*) */// tz m3q.t m ḫrit-ntr in N.* "utterance of /// building a ladder in the necropolis by N.".

[36] Besides the apotropaic PT 314, the texts without distinctive intertextual connections to one another are PT 303, 309, 313, and 318-319. However, it will be seen in passing that these texts possess intertextual connections with the components of recurring series otherwise related to Sequence 57; see n. 156 below.

shared textual content. Setting PT 314 aside, one is left with a set of texts whose intertextual connections and shared performance structure are suggestive of a fourth type.

B. TEXTS OF MATCHING CHARACTERISTICS

Sequence 57's sole Old Kingdom attestation is in the pyramid of Wenis, where it extends from the north wall of the antechamber to the west and east walls of the corridor. Again it is a matter of isolating the series through consideration of later material, since its first recurrence is in the tomb of Senwosretankh,[37] and so also for shorter segments of it, as they are attested only in the Middle Kingdom[38] and later.[39] Despite the very narrow attestation of this series in the Old Kingdom, the characteristics of its texts enjoy very broad distribution among the pyramids.

1. RECURRING SERIES WITH MATCHING CHARACTERISTICS

Hints of their wider distribution are found in Old Kingdom attestations of recurring series built entirely of Sequence 57's components but abbreviated and re-arranged—principally PT 305, 308, 304, 303, attested on the north walls of the pyramids of Merenre and Pepi II,[40] with shorter segments of it attested in three other Old Kingdom

[40] Sequence 58.

sources[41]—and in three later sources, where one finds a few texts from the sequence combined with others to form new recurring series.[42]

But most significant is the presence of Sequence 57's characteristics in twenty-three recurring series that have no texts in common with it at all, especially since these are already attested in the Old Kingdom. In the kings' pyramids, most of these series appear in an area outside of the sarcophagus chamber[43]—with the areas including the descending passage,[44] the vestibule,[45] the corridor,[46] and above all the antechamber,[47] or

[43] Four occur exclusively there: Sequence 120 consisting of PT624 PT268 bPT625A on N/S/N and M/S/Nw; Subsequence 169 consisting of bPT738B-C bPT739A-B fPT740 on M/S/Nw; Sequence 62 consisting of PT335-336 on M/S/W and T/S/W; Sequence 61 consisting of PT330-331 on N/S/N, T/S/W, (and Nt/S/N). One appears in both the antechamber and sarcophagus chamber: Sequence 132 consisting of fPT704 bPT655B-C fPT736-737 bPT738A-C bPT739A-B fPT740 on P/A/N and N/S/N.

[44] Sequence 137 consisting of fPT736-737 bPT738A-C bPT739A-B fPT740 bPT586A-D PT474 on P/D/Wn (and Nt/S/N).

[45] Sequence 103 consisting of PT569 bPT570A-B on P/V/W and M/V/E; Subsequence 143 consisting of PT569 bPT570A on N/V/W; Sequence 106 consisting of PT582 PT562 on N/V/N and M/V/W.

[46] Sequence 98 consisting of PT515-519 on P/C/Wn, N/C/Em, and M/C/Em; Sequence 101 consisting of PT526-531 on P/C/Wn and M/C/Wm; Subsequence 142 consisting of PT527-531 on N/C/Wm.

[47] Especially on the west wall, with Subsequence 94 consisting of PT254-258 on T/A/W; Sequence 93 consisting of PT473-477 PT270 on P/A/W and N/A/W; Subsequence 139 consisting of PT473-476 on M/A/W; Sequence 94 consisting of PT477 PT270 PT478-479 on P/A/W and M/A/W; Sequence 95 consisting of PT478-480 on P/A/W, and N/A/W; but also on the south, east, and north walls, with Sequence 96 consisting of PT484-485 on P/A/W and M/A/S; Subsequence 97 consisting of PT267-268 on T/A/S; Sequence 50 consisting of PT267 bPT1025 on P/A/S (and Ibi/S/Se); Subsequence 100 consisting of PT273-274 on T/A/E; and Sequence 130 consisting of fPT691 fPT691A-691B on N/A/N (and Nt/C/E).

both the corridor and vestibule.[48] Altogether, they contain seventy-four texts not found in Sequence 57.[49]

A specific example can illustrate the nature of the connections between these recurring series and Sequence 57. Appearing on the west walls of the antechambers of the pyramids of Pepi I and II, the three texts of Sequence 95[50] together exhibit five of the motifs found to be characteristic of Sequence 57. The sharing of content between the two is not surprising, since the last text of the former (PT 480) is a variant of a component of the latter (PT 306). But the textual connections between the two series are not merely between the two variants, as may be seen through considering selections from the first text of Sequence 95, PT 478 (N):

971c Arise, O ladder of the god (*sc.* Horus)!
971d Arise, O ladder of Seth!
971d-e Arise, O ladder of Horus, which was made for Osiris,
971e that he ascend upon it to the sky, that he protect[51] Re.
...
975a Cause that the ladder of the god be given to Neferkare
975a and that the ladder of Seth be given to Neferkare,
975b that Neferkare ascend upon it to the sky, that he protect Re.
...
976c O men, let the cobra be for the sky,
976c for Neferkare is the Eye of Horus.
...
978a As for any *3ḫ* or any god whose hand will cross against (lit. into) Neferkare
978b when he would ascend to the sky on the god's ladder,
978c the earth will not be hacked up for him,
978c an offering will not be presented for him,
978d and he will not cross to the evening meal in Heliopolis,
978e nor cross to the meal of the morning in Heliopolis.
...

A ladder (*m3q.t*) is erected—literally commanded to stand up—corresponding to the setting up encountered in Sequence 57.[52] Likewise in that sequence as in this text, the beneficiary is said to ascend to the sky (*prỉ r p.t*),[53] and a vocative is made to men

---

[51] See Goelet 1986, pp. 85-98, on the sense of the phrase *stp z3* as "to protect".

[52] In PT 305 Pyr 472a-b (W), PT 306 Pyr 478b-479a (W), and the Middle Kingdom title to PT 304; see n. 35 above.

[53] The motif appears again later in the text, at PT 478 Pyr 979a-b (N): *m33.t(i)=f(i) sḏm.t(i)=f(i)* | *pr.t=f ỉr p.t ḥr m3q.t nṯr* "as for ... the one who will see and hear his ascending to the sky upon the ladder of the god". In Sequence 57, it appears at PT 302 Pyr 461a (W), PT 306 Pyr 476b and Pyr 479a (W), and PT 321 Pyr 517b (W). In this motif, the beneficiary is not directly addressed, as he is in imperatives and jussives that he ascend (*prỉ*), for which contrasting motif see above at n. 186.

(*rmṯ*),[54] and the beneficiary is not to be opposed by others, in the sense of an arm or hand not being crossed (*ḏ3i ꜥ*) against him.[55] To add to the connections between Sequences 57 and 95, two of these motifs are also found in the final text of the latter, PT 480,[56] while its other text, PT 479, shows a vocative to the sun god.[57] As Sequence 95 exhibits five motifs found to be characteristic of Sequence 57, the two recurring series are empirically related.

And not only in these five points are they connected: the two recurring series share eight other textual points of contact. These expressions develop the themes of the beneficiary's transit, describe the movement of gods (in parallel to the deceased's), and further clarify the beneficiary's position, attributes, identity, and action. Specifically, gods are said to witness his ascent (*m33/ptr pri*),[58] he ascends via a ladder (*3q/ḥfd/pri ḥr*

---

[54] In Sequence 57, it appears at PT 302 Pyr 463d (W) and PT 320 Pyr 516a (W); see nn. 24 and 25 above.

[55] In Sequence 57, it appears at PT 307 Pyr 484a-d (W) and PT 311 Pyr 498b (W); see n. 28 above.

[56] Showing ascent to the sky at Pyr 992a-b (N): *nfr.w(i) 3 m3.w i.q3.wi m3.w | pr.t nṯr pn Ne. ir p.t* "how good it is to see, how exalting to see, the ascending of this god Neferkare to the sky", and the setting up of the ladder at Pyr 995a (N): *f3=sn m3q.t n Ne. | sꜥḥꜥ=sn m3q.t n Ne. | ṯz=sn m3q.t n Ne.* "let them lift up the ladder for Neferkare, let them set up the ladder for Neferkare, let them tie together the ladder for Neferkare".

[57] PT 479 Pyr 990a (N): *rꜥ* "O Re". In Sequence 57, it occurs at PT 302 Pyr 460c and 461a, PT 304 Pyr 470a (W), PT 307 Pyr 482b (W), and PT 311 Pyr 495a (W); see nn. 23 and 26 above.

[58] PT 306 Pyr 476a-b (W): *nfr.w(i) 3 m3.w ḥtp.w(i) 3 ptr i.n=sn i.n nṯr.w | pr.t r=f nṯr pn ir p.t pr.t r=f W. r p.t* "'Ah! How beautiful to see! Ah! How satisfying to behold'—say they, say the gods—'that this god ascends thus to the sky, that Wenis ascends thus to the sky"; PT 478 Pyr 979a-b (N): *m33.t(i)=f(i) sḏm.t(i)=f(i) | pr.t=f ir p.t ḥr m3q.t nṯr* "the one who will see and hear his ascending to the sky upon the ladder of the god"; PT 480 Pyr 992a (N): *nfr.w(i) 3 m3.w i.q3.wi m3.w | pr.t nṯr pn Ne. ir p.t* "how good it is to see, how exalting to see, the ascending of this god Neferkare to the sky".

mɜq.t),[59] the doors of the sky are opened for gods (*wn/zn ꜥɜ.wi*),[60] the god Osiris ascends to the sky (*pri wsir r p.t*),[61] receives his place in the sky (*šzp s.t m ɜḫ.t/qbḥw*),[62] possesses magic (*ḥkɜ.w tp-rd.wi/r-gs.wi*)[63] and dread (*šꜥ.t r-gs.wi/r-rd.wi*),[64] is the *i.mn.w* "enduring bull",[65] and protects the sun god (*stp zɜ rꜥ*).[66] In short, the connections between the two series reach significantly farther beyond merely the motifs found repeated in one of them.

---

The additional motifs help show how the texts of Sequence 57 participate in a broader semantic field: they are linked by a network of connections to Sequence 95.

That network extends quite a bit farther still, since, as was stated above, the component texts of more than twenty sequences and subsequences[67] possess motifs found to be characteristic of Sequence 57. In these other series also, the heavens are cleared,[68] the deceased is repeatedly said to ascend to the sky (*pri r p.t*),[69] and there is still another instance of a ladder being prepared, in this case being brought like a ferryboat.[70]

---

[67] See nn. 43-48 above.

[68] PT 262 Pyr 336b (T) (Subsequence 93): *ḫsb=f šni.wt im=sn*(*i*) *iʿ n rʿ* "even that he repel the storms from them, being risen up to Re"; bPT 570A Pyr 1443a (M) (Sequence 103; Subsequence 143): *iʿ ḥr p.t bꜣq pḏ.t* "the face of the sky is bathed; the stretch (*sc.* the sky) is cleared"; Pyr 1449a-b (M): *ḫsr=k ḥꜣ.ti p.t | r di.t sw ḥr ꜣḫ.ti* "dispelling the bleariness (of the eye) of the sky in order that Harakhti present himself" (compare CT VII 393c: *ḫsr ḥꜣ.t*(*i*) *m-ḏr=f* "the bleariness having been dispelled beside him," where *ḥꜣ.ti* includes an eye-determinative).

[69] PT 267 Pyr 365a (W) (Sequences 50, 59; Subsequences 21, 93, 96-97): *pr=f im r p.t* "that he ascend thereby to the sky"; PT 330 Pyr 539a (T) (Sequence 61): *pr T. ir p.t ḥr. šdšd imi wp.t* "let Teti ascend to the sky upon the Shedshed which is in the horns"; PT 331 Pyr 540a (T) (Sequence 61): *pr T. ir p.t ḥr šdšd imi wp.t* "let Teti ascend to the sky upon the Shedshed which is in the horns (i.e. the apex of sky)"; PT 335 Pyr 546c (T) (Sequence 62): *pr=f r=f ir p.t m-m sn.w=f nṯr.w* "him ascending thus to the sky among his brothers the gods"; PT 474 Pyr 940a (M) (Sequence 93; Subsequences 137, 139): *pr=f r=f r p.t m-m sbꜣ.w m-m i.ḫm.w-sk* "when he thus ascends to the sky to be among the stars, among the Imperishable Stars"; PT 484 Pyr 1020a (P) (Sequence 96): *P. pw wr pr ir p.t ḫprr pr ir ///* "Pepi is a Great One who ascends to the sky, Kheprer who ascends to the ///"; PT 485 Pyr 1030d (P) (Sequence 96): *pr P. pn ir p.t ḫr. mw.t=f nw.t* "that Pepi may ascend to the sky, to his mother Nut"; Pyr 1036b (P): *pri P. pn ir p.t n nw.t* "that Pepi go forth to the sky, to Nut"; Pyr 1038 (P): *pri=f r=f šw=f r=f ir p.t m sbꜣ ʿꜣ ḥr-ib iꜣb* "thus let him ascend, thus let him rise up to the sky, as the great star in the middle of the East"; PT 527 Pyr 1249c (P) (Sequence 101; Subsequence 142): *pr P. pn ir p.t* "let Pepi ascend to the sky"; bPT 586D Pyr 1585b (Nt) (Sequence 137): *pr Nt. ḥr=s r p.t* "that Neith ascend upon it to the sky"; PT 624 Pyr 1761d (Nt) (Sequence 120): *Nt. pw wsir pr m šsꜣ.t* "Neith is Osiris, the one who ascends from the night sky".

[70] bPT 586D Pyr 1585b (Nt) (Sequence 137): *in* [*mꜣq*].*t n Nt. ir.t ḫnm* "bring the [ladder] to Neith, the 'that which Chnum built'-boat", with the restoration [*mꜣq*].*t* predicated by the preservation of a ladder-determinative. Naturally this passage illustrates the identity of ladder with ferryboat.

Continuing the themes of transit in these series, ferryboats are brought in various guises,[71] and there are multiple vocatives to ferrymen and gatekeepers.[72] Having made passage from one point to another, and with those who might cross (*ḏ3i*) themselves against him being eliminated,[73] the deceased is again figured as sitting (*ḥmsi*) with gods[74] and is himself a god, namely Sobek.[75]

---

[71] PT 359 Pyr 599b (T) (Sequence 104): *in.t=f mḫn.t tf n(i)t mr-nḫ3(i) n T.* "that he might bring that ferryboat of the Shifting Waterway to Teti"; PT 475 Pyr 946b (M) (Sequence 93; Subsequence 139): *in nw n ḥr* "bring this (*sc.* Eye of Horus as ferryboat) to Horus"; Pyr 946c (M): *in nw n stš* "bring this (*sc.* testicles as ferryboat) to Seth"; PT 518 Pyr 1193b (P) (Sequence 98): *in nw n P. pn* "bring this to Pepi!"; PT 519 Pyr 1201b-c (M) (Sequence 98): *im(i) in.t(i=i) n M.n. wi3=k pw | ḏ33.w wꜥb.w=k im=f* "cause that I bring to Merenre this bark of yours in which your pure ones are ferried,"; PT 531 Pyr 1254c (P) (Sequence 101; Subsequence 142): *in nw n P. pn* "bring this to Pepi"; bPT 586D Pyr 1585b (Nt) (Sequence 137): *in* [*m3q*].*t n Nt. ir.t ḫnm* "bring the [ladder] to Neith, the 'that which Chnum built'-boat".

[72] The identification of *ḥr=f-ḥ3=f* as both ferryman (PT 569 Pyr 1441a: *ḥr=f-ḥ3=f mšn.ti*) and gatekeeper (PT 519 Pyr 1201a: *ḥr=f-ḥ3=f ir(i) ꜥ3*) links the functions of these two offices. PT 270 Pyr 383a (W) (Sequences 52, 93-94; Subsequences 21-22, 96, 98): *ḥr=f-ḥ3=f m ḥtp m3-ḥ3=f m ḥtp mḫn.t(i) p.t m ḥtp* "O Herefhaf, in peace! O Mahaf, in peace! [73] PT 477 Pyr 963b (N) (Sequences 93-94): *ḥsq=f ḥ3.t(i)w n(i)w ḏ3.t(i)=sn sn m Ne.* "let him (*sc.* Thoth) cut out the hearts of those who would cross themselves to Neferkare".

[74] PT 252 Pyr 274b (W) (Sequence 49; Subsequences 91-92): *ḥms W. ḥnꜥ ḫnn.w rꜥ* "let Wenis sit with those who row Re"; PT 273 Pyr 398c (W) (Subsequence 100): *ḥms=f s3=f ir gbb* "with him sitting with his back to (i.e. beside) Geb"; PT 476 Pyr 953a (M) (Sequence 93; Subsequence 139): *ḥms M.n. m-m=tn* "let Merenre sit among you"; PT 530 Pyr 1253e (P) (Sequence 101; Subsequence 142): *ḥms=f m-m sb3.w imiw p.t* "that he sit among the stars which are in the sky".

[75] PT 582 Pyr 1564b-c (P) (Sequence 106): *wḏꜥ=f mdw sbk <is> imi šd.t | inp is imi t3b.t* "with him passing judgment as Sobek who is in Shedet, as Anubis who is in Tabet".

As before, men (*rmṯ*) can be an audience,[76] but especially the sun god (*rʿ*) is addressed.[77] These are the motifs found to be characteristic of the texts of Sequence 57; that they are found in these other series begins to show how they are all related together.

But there is more. One might recall that several expressions were found once in Sequence 57 but also among the texts of Sequence 95, constituting what may be understood as additional motifs characteristic of a certain type; the same circumstance applies for the other series, with them having additional points of contact with expressions found only once in Sequence 57. And as might be expected, a number of these expressions were encountered already with the example Sequence 95. The motifs further develop the themes of the beneficiary's transit—mirroring the movement of gods—and of his exalted position, attributes, and identity. And added to these themes are the beneficiary's service for the sun god and himself, and very general statements concerning the service and opposition of deities for him. Others open or make a way for

---

[76] PT 573 Pyr 1484a (P) (Sequence 104): *i.pȝ=f m-ʿ=ṯn rmṯ.w m ȝpd.w* "let him fly from you, O men, as (do) birds".

[95] PT 474 Pyr 942c and 943d (M) (Sequence 93; Subsequences 137, 139); the motif occurs also at PT 306 Pyr 477c (W) (Sequence 57; Subsequence 110): *ir.n n=f gbb mr-qd irii n=f im* "Geb has acted for him precisely according to what should be done there for him".

[96] PT 257 Pyr 304e (W) (Subsequences 93-94): *pḫr n=f psḏ.ti tm.t(i)* "the Two Enneads serving him"; PT 260 Pyr 319c (W) (Subsequence 93): *pḫr n=f imiw nww ˁnḫ* "and those who are in Nu serve him, he being alive"; PT 274 Pyr 406a (W) (Subsequence 100): *iw pḫr imiw p.t n W.* "those who are in the sky serve Wenis"; Pyr 408b (W): *iw pḫr n=f ḫꜣ.w* "thousands serve him" (compare CT 187 III 90g: *rdi.n=f ˁḥˁ n=i ḫꜣ.w ḥms n=i š.wt* "he caused that thousands stand for me and hundreds sit for me": the thousands and hundreds are animate beings (rather than inanimate offerings); PT 318 Pyr 512d (T) (Sequence 57; Subsequences 110, 112): *pḫr T.* "serve Teti (O gods)".

(*wḏ*) him to other deities.[97] Adversarially, references are made to Seth's speaking[98] and in it being rhetorically asked whether Seth has slain or will slay (*sm3*) him.[99] Finally, the texts sometimes have an additional audience in the form of a benevolent bull, typically of solar aspect,[100] as opposed to the hostile bull of PT 314 and other apotropaic texts.

To summarize the last few paragraphs, Sequence 57 is related to twenty-three other recurring series through a network of textual points of contact: first, by expressions found to be characteristic of its own components; and second, by expressions found once in it but also in these others. In view of the affinity of its texts with those found in other ancient groupings, one may regard the texts of Sequence 57 as just a portion of a wider ranging type. And in the process of demonstrating the connections of the component texts of the series to those of others, our knowledge of the type's inventory has expanded in respect to the type's member texts.

---

[97] PT 311 Pyr 497b (W) (Sequence 57; Subsequences 110-111): *wḏ W. r=k wḏ sw wḏ sw ḏd-mdw zp-4 n 4 ỉpw kh3.w* "commend Wenis, commend him, commend him—recite four times—to these Four who roar"; PT 359 Pyr 599a (T) (Sequence 104): *i.wḏ T. n m3-ḫ3=f mḫn.ti n*(*i*) *mr-nḫ3*(*i*) "commend Teti to Mahaf, ferryman of the Shifting Waterway"; PT 517 Pyr 1192b (M) (Sequence 98): *wḏ=f M.n. n k3.w* "let him (*sc.* the great god, i.e. Re) commend Merenre to the Kas"; PT 573 Pyr 1482a (P) (Sequence 104): *i.wḏ* (*wi*) *n ʿnḫ z3 spd.t* "commend me to the Living One, the son of Sothis"; Pyr 1482c (P): *wḏ P. pn n wr-šps=f mrii pṯḥ z3 pṯḥ* "commend Pepi to 'Whose Rank is Great,' beloved of Ptah, son of Ptah".

[98] PT 305 Pyr 473b (W) (Sequences 57-58; Subsequences 109, 113-114): *ʿḥʿ W. i.n ḥr ḥms W. i.n stš* "'stand, O Wenis,' says Horus. Compare Griffiths 1960, pp. 8-10.

[99] PT 306 Pyr 481a (W) (Sequence 57; Subsequence 110): *ỉn sm3.n=f tw* "has he slain you?"; PT 474 Pyr 944a (M) (Sequence 93; Subsequences 137, 139): *i.n=f ỉr=k ḏd.n=f sm3=f tw* "has he come against you even having said he would slay you?" See Griffiths 1960, p. 5.

[100] PT 262 Pyr 332a (T) (Subsequence 93): *k3 p.t* "O Bull of the Sky"; PT 304 Pyr 470a (W) (Sequences 52, 57-58; Subsequences 109, 113, 115): *i.*(*n*)*ḏ-ḥr=k ng3 rʿ ḫr*(*i*) *fd ʿb* "hail to you, O long-horned bull, O Re who has four horns"; PT 336 Pyr 547a (T) (Sequence 62): *i.*(*n*)*ḏ-ḥr=k ng3 n*(*i*) *k3.w* "hail to you, O long-horned bull of Ka-bulls".

It also may be expanded in respect to our knowledge of the type's catalog of characteristics. The interrelations of the texts of these other series to one another is evident in their often sharing motifs not only with Sequence 57 but also between them. For example, in addition to appearing in three texts of Sequence 57, the motif of ascending to the sky (*pri r p.t*) is found in PT 478 and 480 of Sequence 95, as well as ten texts surfacing in thirteen other recurring series.[101] But just as the component texts of Sequence 57 constitute only a portion of what may be viewed as a more widely distributed type, so also are the motifs shared between it and the others only a portion of the type's characteristics. In other words, there are a few other motifs found among these recurring series that do not appear in Sequence 57; the motifs of that particular series are only some of the type's total inventory.

To rigorously support that last paragraph, to further cement the ties between the component texts of the other series, and to expand our knowledge of the attributes of the type of text under consideration, these other motifs will now be identified. They further develop the themes of the beneficiary's transition by ascent, flight, and crossing—mirroring the movement of gods—and they deal with his exalted attributes and identity, and added to these themes are more expressions concerning the activities of gods for him.

---

[101] See above nn. 22, 53, 56, and 69.

The deceased in the third person is said to rise up (*šwi*)[102] on his own power, but Horus can also extract him (*šdi*),[103] as can Atum or Shu.[104] In view of the prevalence of the motif of ascending to the sky (*pri r p.t*) in this type of text, the expression *pri m hrw* can be understood as having a similar upward thrust in its several attestations,[105] although later the title of the New Kingdom Book of the Dead is formed from it,[106] where it more typically possesses the sense of "to go out" instead of "to ascend";[107] and so also when the deceased ascends from or between the thighs of gods (*pri ḥr/imitw*

---

[102] PT 269 Pyr 379b (W) (Subsequences 21-22, 96, 98): *i šwi.w i šwi.w* "the one who would rise comes: the one who would rise comes"; PT 480 Pyr 996b (N) (Sequence 95): *i šwi.w* [*i*] *šwi.w* "the one who would rise comes: the one who would rise comes".

[151] PT 269 Pyr 380a (W) (Subsequences 21-22, 96, 98): *nḏr.w n=f it W. tm* ˁ *n*(*i*) *W.* "the father of Wenis, Atum, will grasp the hand of Wenis for him"; PT 480 Pyr 997a (N) (Sequence 95): *nḏr n=f it n*(*i*) *Ne. tm* ˁ *n*(*i*) *Ne.* "the father of Neferkare, Atum, will grasp the hand of Neferkare for him".

districts or "Mesem-lands" (*dmḏ/inq tm sp3.wt/msm.w*)[152] for the beneficiary or Osiris, with cities likewise brought or given (*ini/rḏi niw.wt*)[153] to one or the other.

To summarize the present chapter thus far, with the notable exception of the apotropaic text PT 314, it was initially found that a number of the components of Sequence 57 shared content with other texts in that series, and on those grounds it was supposed that the sequence's texts were characteristic of a type. Confirmation of that supposition was obtained through consideration of other recurring series possessing these characteristics and further supported through identifying more intertextual connections between them. In the process, the inventory of the type's textual characteristics was expanded, and so also was the inventory of the type's membership.

Some degree of faithfulness of that inventory to the ancient classificatory sensibility may be assumed, because the process of choosing texts for consideration was guided by the ancient groupings. As evidence of the homogeneous character of the component texts gathered from these groupings, only three of the seventy-four component texts of the related recurring series[154] have no distinctive intertextual connections with the others.[155] Although five texts of Sequence 57 were not found to possess such connections with their fellows of *that* series, four of them do in fact have

---

[152] PT 477 Pyr 961c (N) (Sequences 93-94): *dmḏ n=k sp3.wt in tm* "the nomes have been brought together for you (*sc.* Osiris) by Atum"; PT 480 Pyr 993a (N) (Sequence 95): *inq.n=f n Ne. sp3.wt* "with him having assembled the nomes for Neferkare"; Pyr 993b (N): *dmḏ.n=f n Ne. msm.w* "with him having joined the Mesem-lands for Neferkare".

[153] PT 477 Pyr 961c (N) (Sequences 93-94): *rḏi n=k niw*(*.t*) "the cities have been given to you (O Osiris)"; PT 480 Pyr 993a (N) (Sequence 95): *in.n=f n Ne. niw.wt* "with him having fetched the cities for Neferkare".

[154] For their listing, see above n. 49.

[155] Specifically PT 272, bPT 586C, and the fragmentary bPT 739B.

connections with texts of the *other* series,[156] the sole exception remaining the anomalous apotropaic text PT 314. In short, the assemblage of motifs passed-in-review may be said to constitute textual characteristics of a type.

But among the type's characteristics is also its performance structure. Early on, it was seen how the texts of Sequence 57 can be understood as having originally had the personal structure, and that is the case with the other seventy-four texts in the recurring series related to it. While over forty of them situate the beneficiary in the third person,[157] and one in the second,[158] twenty-five show signs of editing away from the first[159]—residual traces of the first person in one or two reed-leaves,[160] the agrammatical advancement of a noun,[161] disagreement in person among exemplars,[162] vacillation to the first person, typically with concomittant disagreement among exemplars,[163] doubling of a

first person pronoun with a proper name,[164] and recarving[165]—and two other texts maintain the first person throughout.[166] Since over a quarter of the seventy-four texts indicate an original first person, one has grounds to assume that the practice of editing was elsewhere simply carried out completely. By that assumption, the texts of the recurring series shown to be related to Sequence 57 may be understood as originally having been personal in structure.

2. Further Texts with Matching Characteristics

As it is the case that so far the examination of texts has been strictly confined to those appearing in recurring series, it may be supposed that not all members of the type have been identified, because a substantial number of Pyramid Texts are not attested in any recurring series, and in the preceding chapters it has turned out that types of texts are not restricted to repeated ancient groups. That this holds true for this chapter's type is shown through considerations of texts without regard to their belonging to any series: there are about seventy more texts that may be ascribed to the present type,[167] as they may be seen to possess the motifs and performance situation characteristic of it.

nearly forty show signs of editing away from the first[242]—residual traces of the first person in one or two reed-leaves,[243] the agrammatical advancement of a noun,[244] disagreement in person among exemplars,[245] vacillation to the first person (often with concomittant disagreement among exemplars),[246] doubling of a first person pronoun with a proper name,[247] and recarving.[248] Since over half of the texts indicate an original first person, one may assume that the practice of editing was carried out completely in the others. By that assumption, they may all be interpreted as originally of the personal structure.

3. Conclusions Concerning the Type

Excepting the apotropaic text PT 314, it was shown that most of the components of Sequence 57 shared content with other texts in the series, and that nineteen of them

shared content with about seventy components of other recurring series. A broad array of intertextual connections was drawn out among these texts, which, together with their common performance structure (as interpreted), provides basis for considering them as texts of a certain type. Assuming a degree of faithfulness to the ancient classificatory sensibility because of having proceeded in the identification of the type from the starting point of ancient groupings, the rest of the corpus of Pyramid Texts was examined to find about seventy more texts sharing content with them. These additional texts may also be assumed to have originally been of the same performance structure, owing to various indications of editing among them and some preserved instances of the first person.

With these texts understood as having been recited in their original forms by the beneficiary himself, they are preoccupied with his transition from one place to another, especially by ascending to the sky or horizon or crossing to it as by water, but they also deal with his exalted position, attributes, and identity. In addition, they make reference to his actions for the sun god and for himself, and they make general statements concerning the service of deities for him and sometimes their opposition to him.

Inasmuch as they tend to appear in the antechambers and corridors of the kings' pyramids, it is presumably these very texts that J. P. Allen means when he speaks of "'personal' spells",[249] as opposed to apotropaic texts.[250] But the term "personal" is more appropriately applied to both the texts of this chapter and the preceding, since both may equally be understood as having originally been performed personally by the deceased. His thumbnail description of them as often possessing "metaphors for passage from this

[250] Called "Incantations" by J. P. Allen 1988, p. 38.

life to the next, such as ladders to the sky or crossing of a waterway"[251] is apt but naturally insufficient to embrace all of the texts identified in this chapter. In seeking a loosely descriptive appellation for these texts, "transition texts" or "ascension texts" may be applied to them, in view of their most common theme.

Some justification for the latter term may be found in a set of ancient titles cited within two texts identified as being of the present type.[252] These make reference to the performance of "utterances of ascent" or "rising":

PT 525 Pyr 1244-1246 (M)

920b Pepi has come, only that he, Pepi, become pure in the Field of Rushes
920c only that Pepi go down to the Field of Kenzet
921a Let the Followers of Horus purify Pepi;
921b with them bathing Pepi, drying Pepi,
921c performing the utterance of service for Pepi,
921d performing the utterance of ascent for Pepi, for life and dominion,
922a that Pepi might ascend to the sky, for life and dominion
...

While Schott assumed that the Followers of Horus in these texts represent lector priests performing the utterances,[253] in the context of these two passages Mathieu draws attention[254] to an Old Kingdom inscription of the official Sabni showing that utterances of rising up were known by the one who would be an *3ḫ*: *ỉnk 3ḫ ỉq{t}r rḫ r3=f ỉw(=ỉ) rḫ.k(ỉ) r3 n(ỉ) ỉꜥ n nṯr ꜥ3 nb p.t* "I am an effective *3ḫ* who knows his utterance; I know the utterance of rising up to the great god, lord of the sky".[255] Assuming a correlation between the *r3 n(ỉ) ỉꜥ* "utterance of rising up" in the inscription and the *r3 n(ỉ) pr.w* "utterance of ascent" in PT 471 and 525, Mathieu leaves unaddressed the fact that in the two Pyramid Texts the utterances are still presented as being performed by beings other than the deceased, while in the Sabni inscription it is a question of his own personal knowledge of it.

---

[253] Schott 1964, p. 46.

[254] Mathieu 2004, p. 257. In the context of knowledge of arcana, the inscription is cited at Hays 2004, p. 190 n. 119.

[255] Habachi 1977, p. 40 fig. 16, l. 3 = Habachi 1981, p. 21 fig. 5. On the significance of this and similar passages in respect to access to esoteric knowledge by persons other than the king in the Old Kingdom, see Nordh 1996, p. 171. See also Junker 1949, p. 92.

The resolution of the disparity can be found in other ascension texts. PT 473 makes explicit what is only implicit in the Sabni inscription. *ỉnk Ne. ꜣḫ m rꜣ=f ꜥpr* "{I am} Neferkare is an effective *ꜣḫ* through his utterance";[256] it is through (*m*) his own spell that the deceased actually attains the state of being an *ꜣḫ*. Another text links personal knowledge of a spell to the performance of it. *rḫ sw r-r {i} rꜣ {n} pn n(i) rꜥ | ỉr=f sn ḥkꜣ.w ỉpn n(i) ḥr ꜣḫ.t(i) | wnn=f m rḫ.ỉ n(i) rꜥ | wn(n)=f m smr n(i) ḥr ꜣḫ.tỉ* "as for the one who truly knows this utterance of Re, with him performing this magic of Harakhti,[257] he is one known of Re; he is a companion of Harakhti";[258] knowing a spell implies performance of it. By such statements, it is clear that the deceased held significant responsibility for his post-mortem destiny in his own hands. But in the ethereal condition of a spell's performance in the afterlife, its motive force can be attributed to divine beings rather than the deceased himself. Thus, following a series of addresses originally recited by the deceased[259] to gods including Re, Thoth, and Horus, he is said to be ascended as follows:

PT 262 Pyr 327-336 (T)

...
333a *m-k(w) T. pr m-k(w) T. ỉw=f*
333b *n ỉw.n=f is ḏs=f*
333c *ỉn wp.wt=ṯn ỉn.t sw*
333c *mdw-nṯr siꜥ sw*
...

---

[256] PT 473 Pyr 930f (N). *ꜥpr* modifies *ꜣḫ*; see Edel 1955/1964, § 355 for the syntax.

[257] Lit. "while he performs them, these magical spells of Harakhti".

[258] PT 456 Pyr 855a-d (N). On this passage and its implications as a paratextual mark, see further Coulon 2004, p. 138; Baines 1990, p. 11; and Grimm 1986, p. 106.

[259] As indicated by vacillation to the first person at PT 262 Pyr 329c (T).

...
333a Behold: Teti is ascended; behold: Teti comes.
333b It is not of himself that he comes;
333c it is your message which has brought him;
333c it is the hieroglyphs which have made him rise up.
...

Although in its original form this text was to be recited by the deceased, it is declared that his motion is not *ḏs=f* "of himself", but rather is the result of *wp.wt=tn* "your message", namely, that of Re, Thoth, and Horus. That message is the *mdw-nṯr* "hieroglyphs" or "god's words", the text itself. The motive force behind the ascent of the deceased is in the words recited by him, and yet their origin from him is denied. Rather, their power is attributed to the activity of the gods; it is their words that have caused him to ascend. In short, although it is the deceased who performs the text, that fact is explicitly denied while it is asserted that it is the gods who perform it. Similarly, in PT 471 and 525 the utterances of ascent are said to be performed by divine beings, even though the deceased is the one who actually knows and performs them. The shifting of the source of the efficacy of the text away from human performance provides a theological basis for understanding how the Pyramid Texts, as inscriptions in the darkness of the tomb, could be beneficial to the deceased. In that context, their mode of operation need not depend upon the deceased's performance of them or even his knowledge of them. The hieroglyphs themselves were enough to bring about the desired result. His post-mortem destiny is secured by the words themselves and their divine performance.

C. ASCENSION TEXTS

1. TRANSFORMATION OF SETTING

In Chapter One, it was remarked that, since texts showed signs that the person of the beneficiary was edited away from the first, they had in effect been converted from the personal to the sacerdotal performance structure.[260] A similar observation is made by Doret in the course of investigating the impact of such alterations on the so-called "cleft-sentence": such texts seem to have been "adaptés à une situation où les formules devaient être prononcées par le prêtre-ritualiste".[261] This simple conclusion provides a key for understanding a marked difference between recurring series of offering ritual and resurrection texts on the one hand, and ascension and apotropaic texts on the other: while recurring series of the latter two types have component texts showing signs of editing, none of the former do. The lack of modification with the former shows that the sacerdotal structure was an acceptable form for the tomb context, and texts originally of the personal structure were converted to that form; the intent was to cause all of the texts in the pyramids' sepulchral chambers to *appear* as recitations performed by priests on behalf of the deceased, with him not engaged in the performance of any of them. In contrast to their original forms, they were not to be inscribed as texts to be learned or recited by the deceased,[262] but rather were to be a *representation* of rites done for him.

---

[260] See above at n. 76.

[261] Doret 1991, p. 64, followed in this regard by Kruchten 1996, p. 57 with n. 36.

[262] Although it is clear that the Egyptians deemed the deceased capable of reading texts, as shown clearly by the employment of *m33* "to see, to read" in the First Intermediate Period Letter to the Dead MFA 47.1705 (Simpson 1970, pl. 46A, 2): *in r-r iw. m3.n=k nn n*(*i*) *iw.w*[*t*] "is it not the case that you have seen this cry?" with this translation following Simpson 1970, p. 59 with n. d, who suggests that *iw.w*[*t*] derives from *iw* "to lament". For the mortuary relevance of *iw*, see *ASAE* 43 (1943) p. 503, 4: if you have nothing, then you will speak with your mouth, offering with your hands various items, *iw.k3=ṯn ink 3ḫ iḳr* "and you will make the cry, because I am an efficient *3ḫ*".

A kind of confirmation of the reworking of texts of a personal structure may be found in a handful of recurring series where they are combined with resurrection texts.[263] Chief of these by virtue of its length is a series spanning the west, south, and east walls of the antechamber of the pyramid of Wenis, recurring on the south and east walls of the burial chamber of the Middle Kingdom tomb of Senwosretankh, consisting of PT 247-258, 260-263, and 267-301. The first text of this series, labelled Sequence 48, is a resurrection text; most of the latter half of the series consists of apotropaic texts (PT 276-299); and the remainder are ascension texts (PT 248-258, 260-263, 267-275, and 300-301). As a text of sacerdotal structure, the first text frames those that follow as if they were texts performed by officiants for the deceased, and these texts of originally personal structure have been reworked accordingly. It is no longer a question of them being performed by the deceased himself; their operation is represented as being separate from him, even as the Followers of Horus, and Re, Thoth, and Horus are said to perform spells for the deceased.

To consider Sequence 48 in detail, as J. P. Allen observes, the resurrection text PT 247 begins with a reference to the texts of Wenis's sarcophagus chamber,[264] which are uniformly offering ritual and resurrection texts—*ir.n n=k z³=k ḥr* "your son Horus has

---

[263] In addition to Sequence 48, there are four Old Kingdom recurring series consisting of both ascension and resurrection texts: Sequence 47 consisting of PT245-248 on W/P/S-A/W and Q1Q/S/Se; Sequence 99 consisting of PT523 PT521 on N/C/Wm and M/C/Wmid; Sequence 105 consisting of PT574-575 on P/V/W, N/V/E, and M/V/W; Sequence 67 consisting of PT357 PT407 PT594 on N/S/E and M/S/E. In the Old Kingdom, there are no other recurring series besides Sequence 48 containing both apotropaic and ascension texts.

[264] J. P. Allen 1994, p. 18; however, his statement that this passage somehow marks a distinction between the nature of the texts in the sarcophagus chamber and antechamber is left unsupported. If the distinction is supposed to reside somehow in the past tense of the statement, then it is erased by the futurity implicit in PT 247 Pyr 260b-c (W), cited below.

acted for you".[265] The statement makes allusion to the activities of a priest in the divine role of the deceased's son, Horus,[266] who in the same text is said to be satisfied (*ḥtp*) with him,[267] a formulation found in other resurrection texts.[268] PT 247 goes on to allude to further rites to be performed for the deceased, by a priest referring to himself in the first person—*msḏḏ qdd sbꜣgii ꜥḥꜥ imi ndi.t | ir(=i) t=k nfr m p* "O you who hates sleep and being made stilll, O you who would arise, O you who is in Nedit, let me do your good bread in Pe"[269]—and the speaking officiant commands the deceased to raise himself from upon his side (*tz ḥr gs*),[270] as is found in other resurrection texts.[271] With the deceased directly addressed by a priest speaking of himself in the first person, the performance structure is clear, and so also is the type to which the text belongs, owing to its

---

[265] PT 247 Pyr 257a (W).

[267] PT 247 Pyr 258c (W): *ḥtp ḥr ḥr it=f* "Horus is satisfied concerning his father".

[268] See above nn. 136 and 274.

[269] PT 247 Pyr 260b-c (W).

[270] PT 247 Pyr 260a (W): *W. tz tw ḥr gs=k* "O Wenis, raise yourself from upon your side".

[271] See above nn. 168 and 250.

intertextual connections with other resurrection texts.[272] Indeed, even without considering the person of the beneficiary, Garnot identified this particular text as a ritual recitation, imagining its performance by priests.[273]

The resurrection text PT 247 sets the stage that follow it in Sequence 48, but they are different from it in content and performance structure. There are no distinctive

[272] To the two connections noted above, others may be added. The beneficiary is described as being in the locality of Nedit at PT 247 Pyr 260b (W): *msḏḏ qdd sbꜣgii ꜥḥꜥ imi ndi.t* "O you who hates sleep and being made still, O you who would arise, O you who are in Nedit"; see the resurrection texts PT 422 Pyr 754c (P): *i ꜣḫ pw imi ndi.t sḫm imi tꜣ-wr* "this *ꜣḫ* who is in Nedit comes, the Power who is in the Thinite nome"; PT 442 Pyr 819a (P): *ndi r=f imi ndi.t* "he who is in Nedit is cast down"; PT 468 Pyr 899a (N): *ꜥnḫ ꜣḫ imi ndi.t* "let live the *ꜣḫ* who is in Nedit"; PT 690 Pyr 2108a-b (N): *wsir is | bꜣ pw imi ndi.t sḫm pw imi niw.t wr.t* "as Osiris, this Ba who is in Nedit, this Power who is in the Great City". There is a reference to the spittle of Seth at PT 247 Pyr 261a (W): *nb qr(i) i.sꜣḥ n=f isd stš* "the lord of storm, who *drew out the spittle of Seth for him"; see the resurrection text PT 455 Pyr 850a-b (P): *išš pr m rꜣ ḥr isd pr m rꜣ* [*s*]*tš | wꜥb ḥr im=f* "the spittle which went forth from the mouth of Horus, the spittle which went forth from the mouth of Seth, by which Horus was purified"; and see also the offering ritual text PT 34 Pyr 26c-d (W): *išš.w ḥr zmrn | išš.w stš zmrn* "the spittle of Horus is Zemern-natron, the spittle of Seth is Zemern-natron". And the beneficiary is said to ascend from the Netherworld at PT 247 Pyr 257c (W): *pr=k m dwꜣ.t* "when you ascend from the Netherworld"; see the resurrection text PT 670 Pyr 1973c-d (N): *ḥr iww ꜣḫ.*[*ti iptw*(*i*) | *n wr pn p*]*r m dꜣ.t* "upon the cry of [these] two *ꜣḫ.t*-diadems, [for this Great One who would ascend] from the Netherworld"; Pyr 1986b (N): [*m ꜣḫ pn pr m*] *dꜣ.t wsir Ne. pr m gbb* "[as this *ꜣḫ* who ascends from] the Netherworld, Osiris Neferkare, who ascends from Geb".

[273] See Garnot 1949, p. 102.

intertextual connections to speak of between PT 247 and the texts coming afterwards.[274] And while PT 247 has the beneficiary being addressed by an officiant, a number of texts coming after it show maintenance of the first person beneficiary[275] and signs of editing away from the first person,[276] including recarving.[277] That some of the texts show

---

[274] The very barest connections that may be summoned are the shared use of words from the root *qrỉ* "to storm" at PT 247 Pyr 261a-b (W): *nb qr*(*i*) *i.sʒḥ n=f isd stš* "the lord of storm, who *drew out the saliva of Seth for him" and the ascension text PT 254 Pyr 281a (W): *hʒ snḏ sdʒ mds.w tp-ꜥ*(*.wi*) *qrr n*(*i*) *p.t* "Oh, be fearful! And tremble, O knife, before the storm of the sky" (on this passage, see Hays 2005, pp. 51-56); and possibly the sharing of a command made to Horus (*wḏ n ḥrw*) at PT 247 Pyr 261a (W): *ḥr pw wḏ n=f ir.t n it=f* "it is Horus, the one who is commanded to act for his father", clearly a reference to mortuary service, and an obscure passage in the apotropaic text PT 294 Pyr 436a-b (W): *ḥr pỉ W. ... | wḏḏ n=f zʒw ṯw rw pr wḏ n=f zʒw ṯw rw* "Wenis is Horus... for whom it was commanded 'Beware, O lion!', for whom the command went forth, 'Beware, O lion!'" Aside from these, there is the motif of gods trembling (*sdʒ*, *snhd*, *ʒgbgb*) at the beneficiary in PT 247 Pyr 257b (W): *sdʒ wr.w mʒn=sn šꜥ.t imit ꜥ=k* "even that the Great Ones tremble, even that they see the knife which is in your hand" and in the ascension texts PT 251 Pyr 270d-e (W): *wḏꜥ.t šnw m-tp kʒ sʒhd.t imiw kkw | ḥnw.t wsr.t ḥʒ*(*i*)*t nṯr ꜥʒ* "what parts the wall before the bull, what makes those in the darkness tremble, is the strong horn which is around the Great God"; PT 252 Pyr 272c (W): *i.bz W. m sdʒ* "induct Wenis while trembling (O gods)"; PT 254 Pyr 281a (W): *hʒ snḏ sdʒ mds.w tp-ꜥ*(*.wi*) *qrr n*(*i*) *p.t* "'Oh, be fearful! And tremble, O knife, before the storm of the sky"; PT 257 Pyr 304d (W): *snhd.n=f nb.w ir.w* "he having made the possessors of forms tremble"; Pyr 306d (W): *snhd.n W. nṯr.w smsw r wr* "with Wenis having made the gods tremble, those older than the Great One". While plentiful in Sequence 48, this motif is found equally in resurrection texts and ascension texts alike, in the former at PT 437 Pyr 794a (P): *sdʒ.w n=k psḏ.t* "O you at whom the Ennead trembles" (see J. P. Allen 1984, § 54A3 on the relative form *sdʒ.w*); PT 483 Pyr 1012b (N): *sdʒ n=f psḏ.t wr.t* "one at whom the Great Ennead trembled"; PT 532 Pyr 1259b-c (N): *wsir zʒ gbb tpỉ=f | sdʒ.w n=f psḏ.tỉ* "O Osiris (*sc.* Neferkare), son of Geb, his first, one because of whom the Two Enneads tremble"; and PT 592 Pyr 1615b (M): *ʒgbgb ib mw.t=k ḥr=k m rn=k n*(*i*) *gbb* "the heart of your mother (*sc.* Tefenet) trembles for you, in your name of 'Geb'"; PT 610 Pyr 1710b-c (M): *zʒ gbb tpỉ=f | sdʒ.w n=f psḏ.tỉ* "O son of Geb, his eldest, one at whom the Two Enneads tremble"; and in the latter at PT 327 Pyr 536a (T): *sdʒ.n n=sn psḏ.tỉ* "the Two Enneads having trembled because of them (*sc.* Horus, Seth, Thoth, and the beneficiary)"; PT 328 Pyr 537b (T): *sbʒ kss.w n=f nṯr.w sdʒ.w n=f psḏ.tỉ* "a star to whom the gods bow, because of whom the Two Enneads tremble"; PT 329 Pyr 538b (T): *sdʒ.w n=f psḏ.tỉ* "one because of whom the Two Enneads tremble"; PT 508 Pyr 1110a-b (P): *ʒgbgb nṯr.w iwnw | ḫr ḥrw wdn.t tp-ꜥ.wy M.* "the gods of Heliopolis tremble, at the sound of the litany before Merire" (on *wdn.t*, see Schott 1955, pp. 289-295); PT 581 Pyr 1553b (P): *sdʒ mʒʒ.w ḥꜥp ḥw=f* "and trembling those who see the flooding Nile". Because the motif is found in texts of two different types, it is distinctive to neither one of them.

[276] With vacillation to the first person at PT 262 Pyr 329c (T) and PT 299 Pyr 444c (W); doubling at PT 269 Pyr 378a (P); PT 270 Pyr 386a (M); residue at PT 271 Pyr 390a (N).

[277] PT 301 Pyr 448b (W); PT 283 Pyr 424a (W); and PT 296 Pyr 439a (W).

recarving strongly suggests that they had not already been transformed in performance structure prior to their inclusion in the tomb. Their conversion on the spot is an important point for understanding their history: prior to their sepulchral advent, they were to be recited by the beneficiary himself; upon their transfer there, they were reworked into texts represented as being recited by officiants on his behalf. The addition of the resurrection text PT 247 helped frame their conversion to the sacerdotal structure.

After the Old Kingdom, several ascension texts are regularly represented in their converted forms. The Middle Kingdom stele of Amenemhatseneb situates PT 247 next to a depiction of a priest in the recitation gesture standing before the beneficiary,[278] a scene in the New Kingdom tomb TT 112 similarly shows a priest in the recitation gesture before the beneficiary with an excerpt of PT 249,[279] and a scene inscribed on a New Kingdom offering table juxtaposes PT 268-269 and 275-276 with two priests censing and libating for the beneficiary and his family.[280] To round out these connections, PT 268-269 are incorporated into the Opening of the Mouth ritual, necessarily performed by priests for a passive beneficiary, as its Episodes 63-64.[281] PT 269 is especially telling, since an Old Kingdom exemplar of it shows the doubling of a first person pronoun with the name of the deceased—*mr=tn* {*wi*} *P. pn ntr.w* "may you love {me} Pepi, O

[281] As observed by Otto 1960, vol. ii, pp. 144 and 146.

gods"[282]—thus revealing the originally personal structure of the text, while its Opening the Mouth parallel naturally conforms to the sacerdotal structure throughout, as with *mr sw nṯr.w* "love him, O gods" in the Late Period tomb of Padymenipet.[283] In parallel to Ritner's observation that the same text may be employed for private as well as temple rites,[284] in the heterogeneous Sequence 48 one sees texts originally composed for personal use being transformed into recitations performed by priests. Their combination with a text of sacerdotal structure served to mark their new role, and in that role they continued to appear even after the Old Kingdom.

2. *Ascension Texts as a Tradition*

The complex of ascension texts transferred to the burial chambers of Old Kingdom pyramids was not absolutely fixed in composition and order; rather, the static phenomenon of recurring series was in tension with the variability of the total inventory of ascension texts in each pyramid. Indeed, the play between the static and the variable underscores the living character of the tradition as it first became manifest: ascension texts helped forge a tradition because texts of this type were inscribed in each of the pyramids from Wenis on, but it was a flexible tradition, subject to modification in composition and order.

From the recurrence of Sequence 57's texts in the tomb of the Middle Kingdom official Senwosretankh, it goes without saying that ascension texts were transmitted after

---

[282] PT 269 Pyr 378a (P).

[283] MÖR 64g (TT 33). Not insignificantly, PT 268 and MÖR 63 show exemplar disagreement, in Chapter One assumed to be a sign of modification away from the first person, as at PT 268 Pyr 374b (W): *ḏ3=f r sḫ.t-i3r.w* "let him cross to the Field of Rushes" versus MÖR 63m (Source 4): *ḏ3ii=k r sḫ.t-i3r.w* "may you ...".

[284] Ritner 1989, p. 103.

the Old Kingdom. But, as with apotropaic texts, the patterns of transmission were not identical to those found with texts of sacerdotal structure. For example, there is only one instance of a new recurring series being constructed out of components of Sequence 57,[285] and there are only two instances of subsequences of it appearing outside of Senwosretankh.[286] In addition, only about fifty[287] of the one hundred and seventy or so ascension texts identified in this chapter are attested in the Middle Kingdom. In comparing these facts to what was observed with offering ritual and resurrection texts, it would appear at first glance that the tradition of ascension texts had not maintained so much of its strength.

But the reverse is actually the case. As J. P. Allen has noted, most Coffin Texts are descendants of spells in the antechambers and corridors of pyramids,[288] which is precisely where texts of this type tend to appear.

Many of them are direct descendants, as is richly attested by numerous variants. Not attested before the Middle Kingdom, these texts are closely related to Pyramid Texts in content and structure but with modifications extensive enough so as to regard them as separate texts rather than more or less exact copies of older ones. For example, CT 374 may be compared to the text of which it is a variant, PT 318:[289]

511a Recitation.
511a Teti is the *irritated[290] N'au-serpent,
511a the one who swallowed the seven uraei,
511b his seven vertabrae having come into being,
511c the one who issues commands to the seven expanses,
511c who issues commands to the sovereigns.
511d The mother of Teti is the Henet-pelican;
511d Teti is her son.
512a-b Teti has come, even that he receive a fingernail of resin,[291]
512b resin being in his fingernail;
512c Teti has come, even that he take away your strength,
512c O gods!
512d Serve Teti,
512d he having bestowed your Kas.

CT 374 V 36f-37l (B2L)

[290] Following the translation of Sauneron 1989, p. 143 n. 6.

[291] For "resin", see Nunn 1996, p. 158.

V 36f Metamorphose into a bull-serpent.
V 36g I am the *irritated N'au serpent,
V 36h who swallowed the uraei,
V 37a I having come into being as these vertebrae
V 37b which commanded these Enneads:
V 37d my mother is the Henet-pelican,
V 37d and I am her son.
V 37e+g I have come even after having received resin,
V 37h that I go with resin,
V 37i my fingernail being resin.
V 37k O gods,
V 37k serve me,
V 37k as I bestow your Kas,
V 37l for I am Nehebkau ("Bestower of Kas").

Structure and meaning are paralleled to such an extent that the genetic relationship between the two texts is unmistakable. To be sure, there are plenty of differences, such as the omission of two clauses from the Pyramid Text, "Teti has come, even that he take away your strength," matched by the addition of another in CT 374, "I am Nehebkau." In addition, there are subtle variations in phraseology in the statements that they have in common, and yet both texts are fully intelligible. It is not a question of a garbled Middle Kingdom copy of an Old Kingdom text; it is a matter of a modified version of an older text. Indeed, there are three other Coffin Texts variants of this particular Pyramid Text, none of them precisely like the other, and all of them meaningful.[292] With such genetic affinities present in several other Coffin Texts,[293] one has a clear sign of the tradition's vitality in the Middle Kingdom. It was not a process of

[292] CT 85-87.

[293] CT 121-125, 127 (< PT 737, 738A-C, 739A-B, 740); CT 128 (< PT 586A); CT 255 (< PT 268); CT 288 (< PT 261); CT 326 (< PT 257); CT 364 (< PT 248, 704); CT 421 (< PT 315); CT 573 (< PT 273-274); CT 575 (< PT 260); CT 613 (< PT 655C); CT 619 (< PT 254); CT 622 (< PT 254); CT 712 (< PT 312); CT 768 (< PT 262); CT 832 (< PT 306, 474, 480, 572); CT 837 (< PT 477); CT 1016 (< PT 255).

the mere mechanical transmission of ascension texts from the Old Kingdom; the authors of these texts newly attested in the Middle Kingdom were familiar with the old ones, and they were producing new ones based on them. It was a living tradition.

The very productive nature of that tradition is especially evident through the example of PT 318, since all four of its Coffin Texts variants receive titles with the elements *ḫpr.w m* "metamorphose into...."[294] Texts bearing titles with these elements being very well attested in the Coffin Texts,[295] they, the so-called "transformation texts", are one of the most readily recognizable types from the Middle Kingdom phase of mortuary literature. In a tomb context, their aim was to bring about a result in the cosmic or netherworldly environment, in which the practitioner assumes a new temporary identity[296]—in the present case, a serpent, both in the Pyramid Texts and its Coffin Texts variants. With the application of titles of this kind occurring with Coffin Texts variants of five other Pyramid Texts,[297] in retrospect, one finds a type recognizably distinct in the Middle Kingdom already nascently attested in Old Kingdom ascension texts.

Very closely allied to the phenomenon of the production of variants of Old Kingdom offering ritual texts was the generation of completely new texts of the same

ascending to the sky, in particular by a ladder, and tying and setting it up are adapted from Old Kingdom phraseology. That ascent by means of a ladder is what the text is all about is underscored by the title appended to the text. What one is dealing with is an already ancient pair of motifs interwoven with new expressions; the purpose of the text remains the same, but it has been enlivened with the spirit of its time. The production of new texts according to the characteristics of the Old Kingdom types is important for showing how ideas central to the Pyramid Texts were still in currency in the Middle Kingdom; it is also a further sign that the authors of these new texts were familiar with the more ancient material.

D. SUMMARY

Texts of the ascension type are characterized by a personal performance structure and a set of distinctive motifs developing themes involving the transition of the deceased from one place to another, especially by ascending to the sky or to the horizon or crossing to it as if by water. Such texts also deal with the exalted position of the beneficiary and his attributes and identity. Like apotropaic texts but unlike texts of sacerdotal structure, in ascension texts a transfer in setting of performance from the world of the living to the tomb is explicit in editorial modifications to the person of the beneficiary, including by means of recarving on the tomb wall itself. In such modifications, ascension and apotropaic texts were converted to a format like texts of sacerdotal structure, and thus they were made to represent recitations performed by priests, as opposed to texts learned and presumably performed by the beneficiary himself, their original setting. While, as with apotropaic texts, there was a lesser degree of flexibility in the transmission of series of Old Kingdom ascension texts in the Middle Kingdom, variants of them were produced then, along with new texts containing the more ancient characteristics, for which reasons

it is clear that the Old Kingdom tradition of ascension texts lived on into the Middle Kingdom.

CHAPTER SIX

THE INVENTION OF THE MORTUARY LITERATURE TRADITION

As described in the preceding chapters, the tradition of inscribing mortuary texts on the sepulchral walls of the pyramids of kings and queens was invented when texts were transferred to the tomb from settings outside of it. Inasmuch as they had already enjoyed a separate existence, and thus presumably already participated in traditions of their own, their advent in the tomb did not involve the fabrication of new material, but the diversion of pre-existing material into a second channel. As shown here, that same stream coursed into the Middle Kingdom and beyond.

Upon their introduction to the tomb, the texts exhibit spatial affinities to texts of the same type, as J. P. Allen showed in "Reading a Pyramid" for Wenis, a feature of transmission capitalized upon here for all of the pyramids. These spatial affinities are evidenced most clearly by recurring series of texts. While examining these recurring series along the axes of performance structure and intertextual connections, four types of texts were identified and discussed, corresponding to divisions sketched out by J. P. Allen.[1] In brief, the texts provided the deceased with foodstuff and other items, brought about his resurrection, warded away danger, and effected his transit to a celestial afterlife.

As shown in more detail in the preceding chapters, offering ritual texts are characterized by a sacerdotal peformance structure and by motifs appropriate to the priestly presentation of items emblematic of the Eye of Horus, including the explicit specification of these items as instructions to the officiants. Owing to the intimate

[1] See above Introduction, nn. 18-22.

relations of many offering ritual texts with offering lists, their original setting is seen to be mortuary service.

Texts of the resurrection type are likewise characterized by a sacerdotal peformance structure, but they are dominated especially by motifs indicating the resurrection of the deceased and the reconstitution of his corpse. While these texts have virtually no explicit specifications of items, and thus may be regarded as purely oral in their manner of performance, they do make reference to rites of the sort indicated in offering ritual texts and even cite them. Understanding these texts to have been situated in mortuary service like offering ritual texts helps explain why, in the Middle and New Kingdoms, some resurrection texts are juxtaposed next to pictorial depictions of priests performing rites for the deceased and why some receive titles indicating that they were to be performed prior to and after the reversion of offerings.

As argued in Chapters Two and Three, texts of sacerdotal structure had in effect been scripts for the use of priests performing rites for the deceased, of the sort carried out in the above-ground sanctuary of the pyramid temple of Pepi II; they thus originally served as a cue from which to learn the rites or to be prompted by them. In this respect, the text as an object served a practical function, as an aid to a flesh-and-blood officiant.

After being inscribed in the tomb, the role of a text was necessarily different. Sealed off from the eyes of any living priest, it only represented the rite to which it corresponded. Whereas the original efficacy of the text as ritual script included the vocalic dimension of its words being uttered by a priest, after its inscription upon walls the efficacy of the text inhered to the hieroglyphs alone, independently of any human voice or effort. Within the tomb, no living priest addressed himself to the deceased, nor did any human eyes in the darkness read the inscribed lines so as to remember what words are to be said in a rite. The text had gone from being a script for a rite to being

purely a representation of a rite. Its function had become independent of performance by humans.

Apotropaic and ascension texts are different. The former are characterized by motifs especially expressing vigilance against hostile beings, with them warded away and attacked. Prior to their inscription in tombs, they might have found practical use in daily life situations, as in warding off serpents in a field or in the desert, but, in consideration of their use in the Book of the Dead, their incorporeal significance cannot be ruled out. As argued in Chapter Four, their efficacy was vocalic; prior to their inscription in the tomb, they were oral recitations, and, since they constitute repeated formulae, they were ritual texts. Texts of the ascension type are characterized by motifs developing themes involving the transition of the deceased from one place to another, as by ascending to the sky or crossing to it as if by water. Both types are of an originally personal structure, implying that they were to be known and performed by the beneficiary on his own behalf. Both apotropaic and ascension texts were modified in performance structure upon their introduction to the tomb, for which reason it is evident that they were not composed specifically for the purpose of being inscribed there, as tomb equipment. If they had been, there would have been no reason to modify them when made to fulfill that role.

In view of this last point, Assmann's division of mortuary literature into two categories[2] may be considered. Texts of the first category, "Totenliturgien"[3] belong to "das zugängliche 'Außen'" of a tomb, its cultic areas, were performed by priests for the

[2] Assmann 1986, cols. 1000, 1004 n. 4, and 1005 n. 29; Assmann 1990, p. 2; Assmann 2000, pp. 31-32; Assmann 2001, pp. 322, 335, and 338; and Assmann 2002, pp. 13 and 18. The distinction is already nascently signalled at Assmann 1970, p. 57 n. 2, in comparing the Book of Two Ways to Amduat.

[3] For references, see above n. 297.

deceased,[4] and were not originally composed to "serve the dead as a text to be read in the hereafter".[5] According to him, when texts of this category are found in burial chambers, it is through a secondary use,[6] an "Umfunktionierung" or reworking of their purpose,[7] in effect a conversion of them into the second category. By his interpretation, that second category consists of texts intended to be magical tomb equipment, "Totenliteratur" proper: it is "einer magischen Grabbeigabe (Ausrüstung des Toten mit Jenseit-Wissen)",[8] belongs to "das unzugängliche 'Innen'" of the tomb, its sepulchral chambers,[9] and indeed "gehört demgegenüber dorthin, wo sie aufgezeichnet wird".[10] Assmann makes a final distinction between the two categories based upon differences in the function of the writing of each; while Totenliturgien stood as an artificial *voice for priests*, Totenliteratur stood as an artificial *memory for the deceased*, designed "à équiper le mort d'un répertoire de textes dont il aura besoin dans l'autre monde. Il s'agit donc de pourvoir le mort comme «esprit *akh* qui connaît ses formules», de ces formules mêmes qu'il est supposé connaître".[11]

[10] Assmann 2001, p. 322.

[11] Assmann 2000, p. 32; similarly Assmann 2001, p. 335.

While it is easy to see that features of Totenliturgien correspond to texts of sacerdotal structure, neither of Assmann's categories can fit texts originally of a personal structure. They, like texts of a sacerdotal structure, only belonged to the tomb through a secondary use; indeed, with them it was through an overt redesign of purpose. However, they were not originally written to be recited by priests for the deceased; they were no more priestly "liturgies" than a transformation text from the Coffin Texts was. Given their original performance structure, given that their conversion to a sacerdotal structure was concurrent with their transferral to the wall, and given that they represent a sizable percentage of the corpus, it is not possible to hold, as he does, that "Die Pyramidentexte sind sogar weitgehend der Rezitationsliteratur des königlichen Totenkults entnommen".[12]

It is pertinent to observe that Assmann's dichotomy is at best incomplete at the other end of mortuary literature's temporal spectrum, with the New Kingdom Book of the Dead. While in it one has a number of texts of a sacerdotal structure overtly "reworked" so as to make them suitable for the performance by the deceased himself[13]—and thus that portion of Assmann's dichotomy is realized concretely after the Old Kingdom[14]—a number of paratextual postscripts among its texts make explicit reference to their personal knowledge and performance by their beneficiary *tp t3* "upon earth", that is, by

---

[12] Assmann 2002, p. 13; similarly Assmann 2000, p. 33 with n. 1.

[13] As with BD 174 (Pb and Af) 4: *ṯz.w=i ḥr gs=i* "let me be raised from upon my side", converted to the first person from the original second person of PT 247 Pyr 260a (W): *ṯz ṯw ḥr gs=k* "raise yourself from upon your side".

[14] To a certain extent, the process of conversion of texts of a sacerdotal structure to a personal structure (the exact reverse of what occurs in the Pyramid Texts) is perceivable already in the Coffin Texts, as with the statement at CT 344 IV 366a (B9C): *ṯz wi* "I am raised", clearly derived from the frequently encountered *ṯz ṯw* "raise yourself" of resurrection texts. The fluctuation in pronouns observed by Assmann 2002, p. 73, between exemplars of CT 1 I 2b-e, is of a different nature, since according to his interpretation, it is a matter of converting an original first person priest to the second person deceased, thus still maintaining a sacerdotal structure.

the living for himself, as with *ỉr rḫ mḏ3.t | tn tp t3 ỉw pr=f m hrw wnn=f ḥr šm.t tp t3 m-m ꜥnḫ.w nb.w* "as for the one who knows this book upon earth, he goes out by day and goes upon earth among all the living".[15] In respect to where they situate the experience of such texts, the significance of these kinds of statements has long been recognized: already in the Nineteenth Century, Lepsius commented upon how they showed their relevance to the living,[16] similarly held for the Book of the Dead and other mortuary texts continuously afterwards, by Sethe,[17] Kees,[18] Barguet,[19] Hornung,[20] Wente,[21] Eyre,[22] and others.[23]

[22] Eyre 2002, p. 66.

[23] For further references in scholarship on the performance of mortuary texts by the living, see below n. 25; Federn 1960, pp. 245-246 with nn. 54-55; and Wente 1982, p. 162 n. 9.

Granted, the modern label to be applied to such practices performed upon earth might be quibbled over; in particular, there have been complaints[24] against the appropriateness of the term "mysticism"[25] in this context, even though the word is actually quite broad in meaning.[26] But what remains outside dispute[27] is the simple fact that the living personally engaged themselves with mortuary texts in the New Kingdom,[28] because it is an assertion made by the texts themselves. The in-life dimension of their personal performance entails that utterances from the Book of the Dead did not simply belong to the tomb, that they were not composed purely for it, and that their function and use straddled the boundary between this world and the next.

---

[24] As against it by Assmann 2001a, p. 250 n. 33; Assmann 2001b, pp. 511-515; Willems 1996, pp. 279-283; Assmann 1995c, pp. 52-53 with n. 43; and Demarée 1983, p. 256 n. 311; see also Roulin 1996, vol. i, p. 121 n. 610. Note that Federn 1960, p. 246, holds as "a matter of personal opinion" rather than demonstrable conclusion, that the transformation texts of the Coffin Texts involved the "transformations of a living person into various divinities (or aspects of the one divinity)", and on that speculative basis associates these texts with yogic *samadhi*; setting aside the validity of the speculation, the association is incorrect, since *samadhi* is not a *practice* involving the assumption of a divine identity (as occurs, for example, in the tantric practices *devayoga* and *devamana*, on which see Cozort 1986, pp. 57-58), but rather is a *state* resulting from a practice, a state involving the union of the subject, the mystic, with the object of his contemplation, whatever it may be; see Grimes 1996, pp. 269-270.

[25] As employed by DuQuesne 2002, p. 46; Englund 1999, p. 108; and Wente 1982, p. 161.

[26] See Parrinder 1972, p. 317.

[27] The application of the term "Einweihungstexte" to mortuary texts by Thausing 1943, p. 43, provoked a series of objections against that appelation by Morenz 1952, p. 80; Morenz 1957, col. 124; and Morenz 1975, pp. 200-202, with him seeing in the third work the phrase *tp t3* "in der geistigen Nachbarschaft zur artverwandten Zauberliteratur, in besonderen Fällen zur vielfältig expansiven Gattung der Weisheitslehren, und stellen außerdem einen Bezug auf gottesdienstliche, also den Priestern vorbehaltene Rituale fest". This is not a disputation of the phrase's this-worldly significance, but an acknowledgment of it. For the position of Morenz on the translation of Egyptian ideas into initiatory Hellenistic mystery cults, see Morenz 1973, p. 250.

[28] Because Book of the Dead papyri were by their nature easily portable, in comparison to wooden coffins and stone walls, it is of no avail to minimize the significance of these ancient statements by asserting, as does Servajean 2003, p. 31, that the comparative rarity of mortuary texts reproduced on ostraca shows "que leur lecture dans le monde des vivants était peu fréquente".

That, however, is far from saying that their purpose was not to obtain a beneficial afterlife. Without contemplating whatever mental or spiritual states were provoked by encounters with the texts by the living, at a minimum the texts of the Book of the Dead were read with the aim of preparing oneself for the inevitable catastrophe of death, in order to learn the magical knowledge requisite to the transition from this world to the next.[29] That trajectory is implicit in the phraseology "going out by day" as in the passage mentioned above, since it implies departure from the tomb.[30] The preparatory function, abundantly[31] perceivable in mortuary literature eight centuries after its invention in the Old Kingdom, provides a context for understanding the purpose of Pyramid Texts originally of personal structure. Prior to their being reworked for inscription in the tomb, they were learned by the living in order to become an *ꜣḫ* after death.

For ascension and apotropaic texts, their "Umfunktionierung", plainly evident in physical recarvings, reformulated them upon their introduction to the tomb so as to give them the same appearance as texts of sacerdotal structure. In view of the significance of the alteration, it is thus not the case that, when the tradition of inscribing texts in tombs was invented, they "were written down so that the dead themselves could 'proclaim the provision of supplies (*nis dbḥt-ḥtp*)' instead of this being done by unreliable priests", as Morenz once held.[32] On the contrary, since texts originally of a personal structure were

---

[29] Within the mortuary literature, an obsession with knowledge of arcana emerges in the Middle Kingdom; see Hays 2004, p. 190 with nn. 115-118.

[30] As observed by Morenz 1975, p. 201.

[31] It is present also in the Middle Kingdom mortuary literature, but to a lesser degree, as with the title appended to the end of CT 154 II 288/9a-c (S2P): *wꜣḥ tp tꜣ ꜣḫ m ḫrit-nṯr | ʿq ḥr nb.w iwnw | pr.t r p.t* "enduring on earth, being an *ꜣḫ* in the necropolis, entering in to the Lords of Heliopolis, and ascending to the sky"; for references to usage on earth in the Coffin Texts, see above nn. 17 and 18.

[32] Morenz 1973, p. 229.

reworked so that their performance no longer depended upon the deceased at all, the reverse is seen to be true. But in the sealed tomb environment they, like texts of sacerdotal structure, necessarily stood only as a representation of rites performed for him: by virtue of their new location and by virtue of the alterations made to them, their efficacy was made to reside in the inscribed hieroglyphs alone. Alongside the deceased's having learned the texts and obtained their virtues in life, they appeared on the walls of his tomb in close proximity to him but in a form edited out of his mouth, so that the hieroglyphs of themselves might assist in bringing about the fate that he sought. They acted in parallel to the knowledge he had already gained in life.

Upon their introduction to the tomb, for texts of all types the editorial hand is clear in the reconfiguration of the component texts of recurring series into different series from one pyramid to the next. On the one hand, the recurrence of fixed sets of texts shows an adherence to traditions already in place or in the making, but on the other the reconfiguration of texts, along with a good number of texts not recurring in any series, shows that the process of selection was dynamic and far from fixed. While at least some texts, such as the offering ritual texts of Sequence 23, predate their inscription on sepulchral walls, it may be supposed by the flexibility of the total content of the tombs and its order (and by the existence of variants among the Pyramid Texts themselves[33]) that more contemporaneous texts[34] were also being brought into the sepulcher from external contexts. One may assume, then, that the tradition of inscribing texts in tombs was a reflection of a living stream: the differences between pyramids reflected changes

[33] On the vitality of the discourse that generated these variants, see further Hays 2004, pp. 180-181.

[34] Compare Eyre 2002, p. 24.

going on in the external source material, and thus a tradition outside the pyramids alive and productive with innovation and modification. Reciprocally, the continuities and likenesses from one pyramid to the next, as with the sharing of texts and whole recurring series, are indications of the fixity of that external tradition.

But the tension between the flexible and the fixed must have also been fueled by other factors, including the "structuring structure" of mortuary literature as such, as soon as the decoration of sepulchral chambers became a tradition in its own right. That tension is evident in the gradual diversification of the decorative program as successive pyramids were decorated with texts. In Wenis and Teti, the first two pyramids with texts, the arrangement of texts is more focused, generally with only one or two types of texts appearing on any given surface and without cycling among types on the surfaces. In Wenis, for example, a single series occurs on the the west wall of the sarcophagus chamber, Subsequence 210, which contains only apotropaic texts (see Appendix C, Figures 1 and 2). On the corresponding wall in Teti, the texts are quite different in content, being ascension texts, but here again there is just one type. With this wall as most others in both tombs, the surface is homogeneous in content.

Underneath the homogeneity, however, there is a revealing difference in the nature of the assemblage of texts. While the Wenis west wall apotropaic texts appear in a single series (Subsequence 210), the Teti west wall ascension texts consist of 1) loose texts appearing outside of any recurring series intermingled with 2) three sequences: PT 322-325, Sequence 60, PT 328-329, Sequence 61, PT 332-334, Sequence 62, PT 337 (see Appendix C, Figure 2). Even though the texts of the Teti wall are all of the same type, one sees in the combination of different sequences and un-sequenced texts a sign of diversification from the tradition's more focused inception in Wenis, where most surfaces—and sometimes more than one set of surfaces—have just one series of texts. It

is true that the pyramid of Wenis is a special case, since unlike any other pyramid its texts are matched nearly exactly by another source, the tomb of the Middle Kingdom official Senwosretankh. The very uniqueness of that feature sets the pyramid slightly apart from the others, since the driving causes of the anomaly must have been as unique as their result. Nevertheless, the less unified set of texts on the Teti surface fit into a trend. Although the texts of Sequences 60-62 appear elsewhere as such, their particular configuration with PT 322-325, 328-329, 332-334, and 337 is unique to Teti. In later pyramids, the set of texts on this wall is sundered and dispersed across different surfaces: chunks of Teti's west wall set can be found on different walls of the sarcophagus chamber in later pyramids[35] and even in completely different rooms.[36] Like the apotropaic texts that first appeared on the Wenis west wall, the assemblage of ascension texts first appearing on the Teti west wall had no invariably fixed position in a pyramid.

One might add that even the intrusion of a whole assemblage of ascension texts to the sarcophagus chamber is another mark of editorial freedom, since in Wenis texts of that type occur only in the antechamber and corridor (see Appendix C, Figure 1). Conversely, the presence of apotropaic texts on the Wenis west wall is one of the tomb's other anomalies, since such texts are not found in the sarcophagus chamber at all in any of the later pyramids (see Appendix C, Figures 2-5). Because the ancient editor or editors of the Wenis texts were not slavishly followed by their successors in the choice of texts for surfaces, if there is an ontologically meaningful relation between texts and the surfaces bearing them, then that relationship was under development. The relationships

---

[35] As with Sequence 60, appearing again at P/S/Sw; and with Sequence 61, appearing again at N/S/N.

[36] As with PT 322, found later at P/C/W, M/C/W, and N/C/E; and with PT 324, found later at P/A/N.

were not fixed conceptualizations in the minds of the Egyptians but were in the course of being modified or clarified.

While the surfaces in Wenis and Teti generally homogeneously consist of only one or two types of texts, in the later pyramids there is progressively greater diversity. For example, the sarcophagus chamber west wall in Pepi I has twenty-three resurrection texts followed by four ascension texts; then the wall cycles back to resurrection texts, concluding with seventeen of them (see Appendix C, Figure 3). In effect, the surface is now dominated by two long sets of resurrection texts, split by a short band of ascension texts. In the next pyramid, that of Merenre, the corresponding surface cycles between ascension texts in two short sets, resurrection texts in two very long sets, and a short set of offering ritual texts (see Appendix C, Figure 4). In the last great pyramid of the Old Kingdom, that of Pepi II, five different blocks of resurrection texts appear, sprinkled with a few short ascension and offering ritual texts (see Appendix C, Figure 5). As exemplified by this one particular surface, focused or concentrated uniformity of type on a given surface in the earliest pyramids developed into a progressively greater variety of texts. The first two pyramids exhibit more concentrated masses of texts of a single type. The later three pyramids by contrast still have surfaces with distinguishable masses of texts of a single type, but these masses typically appear within a cycle of different types.

The greater diversity may be attributed at least in part to the conventions of the mortuary literature tradition as they were being forged. To consider the sarcophagus chamber west wall in Pepi II, it is dominated by the twenty-six resurrection texts of Sequence 84—fully half of the texts there. The remainder of the wall consists mostly of sets of three or four resurrection texts separated by single instances of ascension texts. Thus, a single surface as it were cycles between texts of a different type. To a lesser extent, that kind of cycling is evident also on the corresponding surface in Merenre, and

even in Pepi I, with its two blocks of resurrection texts separated by a brief band of ascension texts. From the progressively greater intermingling of texts of different types, as seen at its extreme at Pepi II, it may be hypothesized that the boundaries between the types were becoming blurred over time.

That blurring may be attributed to the alteration of the performance structure of originally personal texts. In modifying them so that they were now represented as being performed for as opposed to by the beneficiary, they were drawn into the same milieu of mortuary ritual as performed by officiants for the deceased. As they were now being regularly framed as sacerdotal texts with the very invention of pyramid texts in Wenis, as seen initially on a small scale with Sequence 48 in Chapter Five, and on a large scale with the Pepi II surface, there was greater freedom as to how texts of a personal structure could be deployed in the tomb. The greater freedom is directly reflected in the progressive diversification of the types of texts deployed on wall surfaces. They were now compatible with the other texts.

In the overall diversification of display, one may detect a subversive counter-tendency running against whatever "canon" the texts of Wenis might have represented. This is a point of some significance, since the seminal character of the Wenis texts has often been commented upon.[37] But in the progressive diversification of texts in the later pyramids, with different types intermingling more readily with one another, one may see a kind of canon at the very moment of the practice of putting texts in tombs and each successive pyramid committing more and more violations of it. The "canon" was

---

[37] As by Baines 2004, pp. 20 and 30; Goebs 2004, p. 145; Barta 1986, pp. 1-8; and Barta 1991, pp. 7-12. Their centrality is based upon a perception that the Wenis texts are the most frequently attested Pyramid Texts among sources after the end of the Old Kingdom. As the stemma of PT 220-222 developed by Kahl 1999, p. 94, shows, the Wenis exemplars were not direct sources to later exemplars; in fact, they occupy a spur in the manuscript tradition.

undergoing fragmentation, with the boundaries between the fragments becoming less and less distinct. This tendency runs counter to the structure one expects with a canon; one expects canonicity to be the result of compromises after conflicts about what texts are to form the core scriptural texts of a religion: it is to fix a flexible inventory of texts and thereby establish uniformity. At the invention of the Pyramid Texts as mortuary literature, one has uniformity present at the beginning, in the homogeneity of surfaces in Wenis. Each of the later pyramids depart progressively more from that homogeneity of display, in addition to incorporating texts not even found in Wenis. If the texts of Wenis were at all canonical, that canon was unraveling from the moment of its inception.

It may be better to conceive of things less in terms of canon and more in terms of the dynamism of the mortuary literature tradition. A dynamic tradition is at hand in the following period, when the sheer abundance of newly attested material in the Middle Kingdom is of itself an argument that most Coffin Texts were produced in that period.[38] Among these new compositions were variants of the older types as well as new exemplars constructed with their characteristics, a very tangible indication of the vitality of the tradition. And it was indeed a tradition reaching back to the Old Kingdom, since alongside these newly generated texts were examples from each Old Kingdom type, copied verbatim, and in that form representing a stable anchor with the past. Thus, should one really wonder when might have been the "productive phase" that generated the texts found statically reproduced in the New Kingdom Book of the Dead,[39] the dynamic

---

[38] For an account of various datings of the corpus of Coffin Texts, ranging from the First Intermediate Period into the Middle Kingdom, see Jürgens 1995, pp. 5-6, with his own views at pp. 73-84. See also Lapp 1996, p. 87; and Lapp 1997, p. 56. Naturally, as observed already by Kees 1983, p. 169, some texts known only from Middle Kingdom sources had doubtless been composed in the Old Kingdom.

[39] For this query, see Assmann 1995a, p. 4. On the reproductive versus productive transmission of texts, see Kahl 1999, pp. 37-38, citing Assmann 1983, pp. 7-15.

creativity intermingling with faithful copying in the Middle Kingdom provides the obvious answer. Far from being separate and distinct from what came before, the authors of the new texts were familiar with the tradition of the mortuary literature as it had poured into tombs in the Old Kingdom, and they appropriated, adapted, and extended that tradition. In a very real sense, the priests and scribes of the Coffin Texts reinvigorated and even reinvented it. With feet planted firmly in foundations of the past, their genius was enabled to realize its potential in the present.

APPENDIX A

THE PERSON OF THE BENEFICIARY IN PYRAMID TEXTS

Abbreviations:

--	beneficiary not explicit
1	beneficiary in first person
2	beneficiary in second person
3	beneficiary in third person
2-3	beneficiary in second and third person
2-3 < *1	beneficiary edited into second and third[1] person from first
2/3 < *1	beneficiary edited into second or third[2] person from first
3 < *1	beneficiary edited into third person from first
Advanced Noun	showing a noun advanced to a position appropriate to a pronoun
Disagreement	showing where different exemplars of the same text disagree
Doubling	showing both first person pronoun and proper noun
Recarved	showing an older version of a passage, later modified on the wall
Reference	showing typical person of a text
Residue	showing a flexional ending appropriate to the first person
Switching (2-3)	showing where the person switches between the second and third
Vacillation to 1st	showing where the person switches to the 1st person

[1] In other words, in at least one exemplar of a text, the beneficiary appears in both second and third persons.

[2] In other words, the beneficiary consistently appears in the second person in at least one exemplar of a text, and in at least one other exemplar he consistently appears in the third person.

[5] Sim. Pyr 901a.

[6] Cf. Pyr 114: *mḥ.n kw ḥr tm.ti m ir.t=f m-tp wꜣḥ.t* 'before the oblation has Horus filled you completely with his Eye' and Pyr 614d: *mḥ.n kw <ḥr> tm.ti m ir.t=f* '<Horus> has filled you completely with his eye.'

[7] The final *-r* shows that *nṯr(w)* is meant, but note that the OM version of this passage can substitute *bd* "purification" or even *snṯr.w* "incense"; see OM 5c (version 4), while versions 3, 6, and 9 show phonetics for *nṯrw*. IHR 62 (XXXV, 6) gives *ꜥb* "purification." The present translation as "purification" follows Otto 1960, vol. 2 p. 48 n. 6.

[8] At Pyr 29c spelled with full phonetic complements. OM 6a consistently shows *snṯr.w*, as does IHR 61 (Pap. Berlin 3055 XXXV, 1) by my reading. The translation "censing" follows the alternative mentioned at Otto 1960, vol. 2 p. 49 n. 5, "'Dein Weihrauch is der Weihrauch des Horus' usw."

PT 37: 2nd person Reference	2	Pyr 30a (W)	*hꜣ W. i.smn(=i) n=k ꜥr.ti=k(i)* "O Wenis, let me fix your jaws for you"

PT 224: 2nd & 3rd Reference	2	Pyr 221a (T)	*ȝḫ=k hȝ T. m-ꜥb sn.w=k ntr.w* "you being an *ȝḫ*, O Teti, among your brothers the gods"

[28] The correct version, as at W: *iw.n*(=*i*) *ḫr=t* "... have I come", is spoken by a priest, who then makes reference to the deceased at Pyr 150c in the third person, as observed by Sethe 1935a, p. 46. J. P. Allen 1994, p. 16 n. 18, believes that the first person in W refers to the king, with Middle Kingdom exemplars like Ab1Le having been altered according to the tendency observed above in Chapter One.

Switching (2-3)	3	Pyr 741e (T)	*ḥr=ṯ pw nn ꜣs.t*

[48] Genitival noun replacing genitival suffix of *s.wt*, advanced ahead of participle.

[49] See two other texts employing virtually the same phraseology, Pyr 1867b and 2001b-c, as well as 727b (N), all showing imperative plus reinforcing pronominal dative. T. has an interjectional vocative here, as at Pyr 731a, 731c, and 733d, and has accidentally omitted the suffix pronoun from *n<=k>*, as also occurs with reinforcing pronominal dative at Pyr 1278a and 1916a.

			"this is your Horus, O Isis"
PT 418: 3rd person Reference	3	Pyr 742c (M)	*d=i ṯn m wp.t it(=i) M.n.* "let me place you on the brow of my father Merenre"

PT 425: 2nd person			

[50] As observed Sethe 1935d, pp. 378-379, an officiant speaking of himself in the first person has been incorrectly replaced with the name of the beneficiary.

[51] The first person suffix referring to the officiant has been incorrectly replaced by the third, but the statement remains a vocative to the beneficiary.

Reference	2	Pyr 775a (P)	*wsir P. nd.ti*[52] "O Osiris Pepi, may you be saved"
PT 426: 2nd person			
Reference	2	Pyr 776a (P)	*wsir P. ḫ^{c}.n=k* "O Osiris Pepi, you have appeared"

PT 433: --			
Reference	--	Pyr 783b (P)	*zm^{3}.n(=i*[55]*) n=ṯ t^{3}*

[52] Given that *wsir P.* is clearly a vocative, this is evidently an exclamatory stative in the second person from a transitive verb, unexpectedly with passive sense.

[53] M shows *ḫnm(=i) wr pn* "that I (*sc.* Nut) may protect this Great One (*sc.* Merenre)": alteration of the person of a god (or officiant in the guise of a god).

[54] The goddess Nut is the referent.

[55] The speaker is Geb; see exemplar M, with *zm^{3}.n n=ṯ gbb t^{3}* "as Geb has joined the land for you."

			"as I have joined for you the land"

APPENDIX B

RECURRING SERIES OF PYRAMID AND COFFIN TEXTS

As defined in the Introduction, a *sequence* is "a series of texts occurring together in the same order on more than one source". A *subsequence* is "a segment of a sequence, consisting of some but not all of its texts while retaining the same order, and attested as such on at least one source".

This appendix lists the sequences and subsequences known to the present author, with a numerical label arbitrarily assigned to each of them by him. Section 1 lists recurring series consisting only of Pyramid Texts, Section 2 lists those consisting of both Pyramid and Coffin Texts, and Section 3 lists those consisting of only Coffin Texts.

The sequences are presented in the order of their numerical label. Subsequences are presented immediately after the sequences of which they are segments.

Under the heading of each sequence and subsequence are enumerated the component texts and details for each attesting source: source sigla, location of attestation, and period.

For abbreviations of source sigla, see T. G. Allen *Occurrences of Pyramid Texts with Cross Indexes of These and Other Egyptian Mortuary Texts*. SAOC, vol. 27. Chicago: The University of Chicago Press, 1950, augmented by L. Lesko, *Index of the Spells on Egyptian Middle Kingdom Coffins and Related Documents*, Berkeley: B.C. Scribe Publications, 1979, and H. Willems, *Chests of Life: A Study of the Typology and Conceptual Development of Middle Kingdom Standard Class Coffins*, MVEG, vol. 25. Leiden: Ex Oriente Lux, 1988.

For all abbreviations of location and period, see above pp. vii-xiii.

[29] *RdT* 23, p. 7.

[30] Berger-el Naggar *et al.* 2001, p. 32, observe wrongly that PT 444-445 constitute a "une formule unique", with this single text being more developed in P than in "les versions parallèles". Their modern view is incorrect, since PT 444 in P ends with a *ḥw.t*-"stanza"-mark at Pyr 824d, and thus is clearly anciently separated from what follows it. For this reason, it is likely that PT 445 must be struck from the inventory of texts in AII/S/W, as presented at Dobrev *et al.* 2000, p. 281; and Mathieu 2004, p. 249 n. 15.

[31] Compare "Spruchfolge C" of Altenmüller 1972, pp. 26-32, and 47-49. Note that PT 443 through PT 356 occupy Nt/S/W 26-44 (old Nt 410-427).

[41] PT 592 appears at N/S, section Sw D 1-7, and PT 213 appears on the same wall, section Se 1ff. by the terminology of Berger-el Naggar *et al.* 2001, pp. 63 and 44.

[42] PT 592 ends Nt/S/N at the west end of the wall; PT 213 occurs on Nt/S/S at the beginning of a new section there (labelled XVIII at Jéquier 1933, p. 17 fig. 8, called "Se I" at Berger-el Naggar *et al.* 2001, p. 44).

[43] A further instance of this subsequence (or of Sequence 112) is perhaps at AII; see Dobrev *et al.* 2000, p. 281, together with Mathieu 2004, p. 249 n. 15.

[44] "Sequence E1" by J. P. Allen 1994, 12. Compare "Liturgie PTA" of Assmann 2001b, p. 335; and see Assmann 2002, p. 40; Assmann 2000, p. 38; Assmann 1990, p. 14; and Assmann 1986, col. 1000.

[45] "Spruchfolge A" by Altenmüller 1972, pp. 46-47; "Gruppe C" by Osing 1986, p. 138; "suite A" by Bène and Guilhou 2004, p. 57.

APPENDIX C

INDICATION OF RECURRING SERIES IN PYRAMIDS OF KINGS

Notes to the Appendix

1) The following set of five figures is intended to show the surface distribution of recurring series and texts in the pyramids of kings until the end of Dynasty Six.
2) Texts not considered in the present study, usually because of fragmentary state of preservation or generally poor condition of surface, are indicated by marks of ellipsis (...).
3) The figures indicate type according to the following set of abbreviations:

   Off: Offering Ritual

   Res: Resurrection

   Apo: Apotropaic

   Asc: Ascension

   Prov: Provisioning[1]

   Seq: Sequence

   Subseq: Subsequence

   All other abbreviations are also employed.
4) The significance of the progressively greater degree of alternation among types is discussed above, in Chapter Six.

[1] See above in the Introduction at n. 56.
